Another function of GAM336879 is therefore inhibition of IAPP, a GAM336879 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336879 TGFB1 TTGCCCAGGCTAGAG TGFB1 (Accession NM_000660.1) is another GAM336879 target gene. A A

TGCAGTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of TGFB1. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336879 HTR2C CACTGCAACCTCTGC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession B A

CTCCTGG NM_000868.1) is another GAM336879 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of HTR2C, a GAM336879 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336879 IAPP CACTGCAACCTCTGC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is B A

CTCCTGG another GAM336879 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of IAPP, a GAM336879 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM336879 MTNR1A CACTGCAACCTCTGC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is B A

CTCCTGG another GAM336879 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of MTNR1A, a GAM336879 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336879 OGDH CACTGCAACCTCTGC Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession B A

CTCCTGG NM_002541.1) is another GAM336879 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of OGDH, a GAM336879 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM336879 PRND CACTGCAACCTCTGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is B A

CTCCTGG another GAM336879 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336879 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM336879 is therefore inhibition of PRND, a GAM336879 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336879 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336880 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336880 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336880 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336880 is therefore inhibition of APPBP2, a GAM336880 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336880 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336880 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM336880 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336880 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336880 is therefore inhibition of BACE2, a GAM336880 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336880 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336880 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336880 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336880 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336880 is therefore inhibition of FHL2, a GAM336880 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336880 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336880 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336880 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336880 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336880 is therefore inhibition of HD. Accordingly, utilities of GAM336880 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336880 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336880 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336880 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336880 is therefore inhibition of IGF1, a GAM336880 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336880 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336880 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM336880 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336880 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336880 is therefore inhibition of PRND, a GAM336880 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336880 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336882 IL1A AGAGTGTGTCTATGG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is a A A
AAGGGGT GAM336882 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336882 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336882 is therefore inhibition of IL1A, a GAM336882 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336882 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336883 APBB2 TTGTGGTTTTCCCAG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GTGGTAG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM336883 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336883 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336883 is therefore inhibition of APBB2, a GAM336883 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336883 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336886 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336886 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336886 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336886 is therefore inhibition of APPBP2, a GAM336886 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336886 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336886 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336886 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336886 is therefore inhibition of BACE2, a GAM336886 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336886 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336886 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336886 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336886 is therefore inhibition of FHL2, a GAM336886 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336886 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336886 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336886 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336886 is therefore inhibition of IGF1, a GAM336886 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336886 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336886 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336886 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336886 is therefore inhibition of MME, a GAM336886 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336886 PRND ACTGCACTCCAGCCT GGGCAAC A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336886 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336886 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336886 is therefore inhibition of PRND, a GAM336886 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336886 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336887 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336887 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336887 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336887 is therefore inhibition of APPBP2, a GAM336887 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336887 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336887 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336887 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336887 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336887 is therefore inhibition of BACE2, a GAM336887 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336887 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336887 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336887 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336887 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336887 is therefore inhibition of FHL2, a GAM336887 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336887 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336887 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336887 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336887 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336887 is therefore inhibition of IGF1, a GAM336887 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336887 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336887 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336887 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336887 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336887 is therefore inhibition of MME, a GAM336887 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336887 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336887 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM336887 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336887 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336887 is therefore inhibition of PRND, a GAM336887 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336887 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336888 TNFSF5 CTCTTTAGTAGGAAC TNFSF5 (Accession NM_000074.1) is a GAM336888 target gene. A A

TCTGGAT TNFSF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336888 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336888 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM336888 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM336889 DLST GTCACCAGGCAGAAT Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TCAGATA oxo- glutarat (DLST, Accession NM_001933.2) is a GAM336889 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336889 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336889 is therefore inhibition of DLST, a GAM336889 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336889 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336892 ACE GGCAGCTGTGCAGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TGGGGGT (ACE, Accession NM_152831.1) is a GAM336892 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336892 is therefore inhibition of ACE, a GAM336892 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336892 ARHA GGCAGCTGTGCAGAG Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

TGGGGGT is another GAM336892 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336892 is therefore inhibition of ARHA, a GAM336892 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336892 DLST GGCAGCTGTGCAGAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TGGGGGT oxo- glutarat (DLST, Accession NM_001933.2) is another GAM336892 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336892 is therefore inhibition of DLST, a GAM336892 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336892 NOTCH1 GGCAGCTGTGCAGAG Notch (Drosophila) Homolog 1 (translocation- associated) A A

TGGGGGT (NOTCH1, Accession NM_017617.2) is another GAM336892 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336892 is therefore inhibition of NOTCH1, a GAM336892 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336892 OLR1 GGCAGCTGTGCAGAG Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A TGGGGGT (OLR1, Accession NM_002543.1) is another GAM336892 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336892 is therefore inhibition of OLR1, a GAM336892 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336892 SNCA GGCAGCTGTGCAGAG SNCA (Accession NM_000345.2) is another GAM336892 target gene. A A TGGGGGT SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336892 is therefore inhibition of SNCA. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM336892 UBB GGCAGCTGTGCAGAG Ubiquitin B (UBB, Accession NM_018955.2) is another GAM336892 A A TGGGGGT target gene. UBB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336892 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336892 is therefore inhibition of UBB, a GAM336892 target gene which marks cellular proteins for degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336892 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM336893 ACE GGCAGCTGTGCAGAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TGGGGGT (ACE, Accession NM_152831.1) is a GAM336893 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336893 is therefore inhibition of ACE, a GAM336893 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336893 ARHA GGCAGCTGTGCAGAG Ras Homolog Gene Family, Member A (ARHA, Accession NM_001664.1) A A

TGGGGGT is another GAM336893 target gene. ARHA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ARHA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336893 is therefore inhibition of ARHA, a GAM336893 target gene which regulates remodeling of the actin cytoskeleton during cell morphogenesis and motility. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

ARHA.The function of ARHA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.

GAM336893 DLST GGCAGCTGTGCAGAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TGGGGGT oxo- glutarat (DLST, Accession NM_001933.2) is another GAM336893 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336893 is therefore inhibition of DLST, a GAM336893 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM336893 NOTCH1 GGCAGCTGTGCAGAG Notch (Drosophila) Homolog 1 (translocation- associated) A A

TGGGGGT (NOTCH1, Accession NM_017617.2) is another GAM336893 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336893 is therefore inhibition of NOTCH1, a GAM336893 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336893 OLR1 GGCAGCTGTGCAGAG Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A

TGGGGGT (OLR1, Accession NM_002543.1) is another GAM336893 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336893 is therefore inhibition of OLR1, a GAM336893 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336893 SNCA GGCAGCTGTGCAGAG SNCA (Accession NM_000345.2) is another GAM336893 target gene. A A

TGGGGGT SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336893 is therefore inhibition of SNCA. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM336893 UBB GGCAGCTGTGCAGAG Ubiquitin B (UBB, Accession NM_018955.2) is another GAM336893 A A

TGGGGGT target gene. UBB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336893 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336893 is therefore inhibition of UBB, a GAM336893 target gene which marks cellular proteins for degradation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336893 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM336894 BACE AGTATTTCTTGTTTT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

ATTGAGA is a GAM336894 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336894 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336894 is therefore inhibition of BACE, a GAM336894 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336894 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336894 GYPA AGTATTTCTTGTTTT ATTGAGA Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is another GAM336894 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336894 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336894 is therefore inhibition of GYPA, a GAM336894 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336894 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336894 NOTCH1 AGTATTTCTTGTTTT ATTGAGA Notch (Drosophila) Homolog 1 (translocation- associated) (NOTCH1, Accession NM_017617.2) is another GAM336894 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336894 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336894 is therefore inhibition of NOTCH1, a GAM336894 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336894 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM869.

GAM336895 BACE AGTATTTCTTGTTTT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138972.1) A A

ATTGAGA is a GAM336895 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336895 is therefore inhibition of BACE, a GAM336895 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336895 GYPA AGTATTTCTTGTTTT Glycophorin A (includes MN blood group) (GYPA, Accession A A

ATTGAGA NM_002099.2) is another GAM336895 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336895 is therefore inhibition of GYPA, a GAM336895 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336895 NOTCH1 AGTATTTCTTGTTTT Notch (Drosophila) Homolog 1 (translocation- associated) A A

ATTGAGA (NOTCH1, Accession NM_017617.2) is another GAM336895 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336895 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336895 is therefore inhibition of

NOTCH1, a GAM336895 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336895 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM336896 CAV1 GAAGCATTGTGAGAA A A ACAGGTT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM336896 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336896 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336896 is therefore inhibition of CAV1, a GAM336896 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336896 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336896 HD GAAGCATTGTGAGAA A A ACAGGTT HD (Accession NM_002111.3) is another GAM336896 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336896 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336896 is therefore inhibition of HD. Accordingly, utilities of GAM336896 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336897 ADAMTS5 TAGGCAGTCTCAGTT A A GTTGGGT A Disintegrin- like and Metalloprotease (reprolysin type) with Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM336897 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336897 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336897 is therefore inhibition of ADAMTS5, a GAM336897 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336897 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM336897 CAV1 TAGGCAGTCTCAGTT GTTGGGT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM336897 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336897 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336897 is therefore inhibition of CAV1, a GAM336897 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336897 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336897 MPO TAGGCAGTCTCAGTT GTTGGGT Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM336897 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336897 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336897 is therefore inhibition of MPO, a GAM336897 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336897 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM336898 APPBP2 AACCCTGGAGGCAGA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGTTGCG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336898 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336898 is therefore inhibition of APPBP2, a GAM336898 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336898 IGF1 AACCCTGGAGGCAGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGTTGCG NM_000618.2) is another GAM336898 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336898 is therefore inhibition of IGF1, a GAM336898 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336898 MAPK10 AACCCTGGAGGCAGA Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

GGTTGCG NM_002753.2) is another GAM336898 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336898 is therefore inhibition of MAPK10, a GAM336898 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336898 MME AACCCTGGAGGCAGA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGTTGCG enkephalinase, (MME, Accession NM_007289.1) is another GAM336898 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336898 is therefore inhibition of MME, a GAM336898 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336898 PRND AACCCTGGAGGCAGA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGTTGCG another GAM336898 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336898 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336898 is therefore inhibition of PRND, a GAM336898 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336898 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336901 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336901 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336901 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336901 is therefore inhibition of APP. Accordingly, utilities of GAM336901 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336903 ACE TAGTGCAATGGCGCG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

ATCTCGG (ACE, Accession NM_152831.1) is a GAM336903 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336903 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336903 is therefore inhibition of ACE, a GAM336903 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336903 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336903 MTNR1A TAGTGCAATGGCGCG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

ATCTCGG another GAM336903 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336903 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336903 is therefore inhibition of MTNR1A, a GAM336903 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336903 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM336906 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336906 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336906 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336906 is therefore inhibition of APPBP2, a GAM336906 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336906 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336906 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336906 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336906 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336906 is therefore inhibition of BACE2, a GAM336906 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336906 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336906 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM336906 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336906 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336906 is therefore inhibition of

FHL2, a GAM336906 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336906 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336906 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM336906 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336906 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336906 is therefore inhibition of HD. Accordingly, utilities of GAM336906 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336906 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM336906 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336906 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336906 is therefore inhibition of IGF1, a GAM336906 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336906 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336906 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336906 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide

sequence of GAM336906 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336906 is therefore inhibition of PRND, a GAM336906 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336906 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336907 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336907 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336907 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336907 is therefore inhibition of APPBP2, a GAM336907 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336907 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336907 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM336907 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336907 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336907 is therefore inhibition of BACE2, a GAM336907 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336907 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM189.

GAM336907 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336907 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336907 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336907 is therefore inhibition of FHL2, a GAM336907 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336907 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336907 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM336907 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336907 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336907 is therefore inhibition of HD. Accordingly, utilities of GAM336907 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336907 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336907 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336907 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336907 is therefore inhibition of IGF1, a GAM336907 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336907 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336907 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM336907 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM336907 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336907 is therefore inhibition of PRND, a GAM336907 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336907 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336908 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336908 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336908 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336908 is therefore inhibition of APP. Accordingly, utilities of GAM336908 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336909 IGF1 CTGCTAAACATCCTA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CACTGC NM_000618.2) is a GAM336909 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336909 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336909 is therefore inhibition of IGF1, a GAM336909 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity

and therefore is associated with Alzheimer. Accordingly, utilities of GAM336909 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336911 GYPA AAGACACTTTCTAAA Glycophorin A (includes MN blood group) (GYPA, Accession A A
TAGAAGT NM_002099.2) is a GAM336911 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336911 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336911 is therefore inhibition of GYPA, a GAM336911 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336911 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336913 IGF1 ACAAAAAATACGAAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
ATTAGCT NM_000618.2) is a GAM336913 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336913 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336913 is therefore inhibition of IGF1, a GAM336913 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336913 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336913 PRND ACAAAAAATACGAAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
ATTAGCT another GAM336913 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336913 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336913 is therefore inhibition of PRND, a GAM336913 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336913 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336914 IGF1 ACAAAAAATACGAAA ATTAGCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM336914 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336914 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336914 is therefore inhibition of IGF1, a GAM336914 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336914 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336914 PRND ACAAAAAATACGAAA ATTAGCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336914 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336914 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336914 is therefore inhibition of PRND, a GAM336914 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336914 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336916 FLNB CTTCTTTGGGGTGGG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A

CTTGCTC NM_001457.1) is a GAM336916 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336916 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336916 is therefore inhibition of FLNB, a GAM336916 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336916 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM336917 GFAP TTTGGTCTAATCTTC GFAP (Accession NM_002055.2) is a GAM336917 target gene. GFAP A A

AAGAGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336917 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336917 is therefore inhibition of GFAP. Accordingly, utilities of GAM336917 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336917 HD TTTGGTCTAATCTTC HD (Accession NM_002111.3) is another GAM336917 target gene. HD A A

AAGAGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336917 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336917 is therefore inhibition of HD. Accordingly, utilities of GAM336917 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336918 GFAP TTTGGTCTAATCTTC GFAP (Accession NM_002055.2) is a GAM336918 target gene. GFAP A A

AAGAGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336918

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336918 is therefore inhibition of GFAP. Accordingly, utilities of GAM336918 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336918 HD TTTGGTCTAATCTTC HD (Accession NM_002111.3) is another GAM336918 target gene. HD A A

AAGAGGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336918 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336918 is therefore inhibition of HD. Accordingly, utilities of GAM336918 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336919 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336919 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336919 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336919 is therefore inhibition of APP. Accordingly, utilities of GAM336919 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336920 APPBP2 GCCTGTAATCCCAGC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TACTTGG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336920 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336920 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336920 is therefore inhibition of APPBP2, a GAM336920 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336920 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336920 CASP3 GCCTGTAATCCCAGC Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A
TACTTGG Accession NM_032991.1) is another GAM336920 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336920 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336920 is therefore inhibition of CASP3, a GAM336920 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336920 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336920 FHL2 GCCTGTAATCCCAGC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TACTTGG another GAM336920 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336920 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336920 is therefore inhibition of FHL2, a GAM336920 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336920 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336920 GFAP GCCTGTAATCCCAGC GFAP (Accession NM_002055.2) is another GAM336920 target gene. A A
TACTTGG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336920 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336920 is therefore inhibition of GFAP. Accordingly, utilities of GAM336920 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336920 IGF1 GCCTGTAATCCCAGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TACTTGG NM_000618.2) is another GAM336920 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336920 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336920 is therefore inhibition of IGF1, a GAM336920 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336920 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336920 PRND GCCTGTAATCCCAGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TACTTGG another GAM336920 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336920 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336920 is therefore inhibition of PRND, a GAM336920 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336920 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336921 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGTAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336921 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336921 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336921 is therefore inhibition of APPBP2, a GAM336921 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336921 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336921 FHL2 A A CACTGCACTCCAGCC TGGGTAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336921 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336921 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336921 is therefore inhibition of FHL2, a GAM336921 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336921 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336921 IGF1 A A CACTGCACTCCAGCC TGGGTAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336921 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336921 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336921 is therefore inhibition of IGF1, a GAM336921 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336921 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336921 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGTAA another GAM336921 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336921 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336921 is therefore inhibition of PRND, a GAM336921 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336921 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336922 APPBP2 CACTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGTAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336922 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336922 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336922 is therefore inhibition of APPBP2, a GAM336922 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336922 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336922 FHL2 CACTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGTAA another GAM336922 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM336922 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336922 is therefore inhibition of FHL2, a GAM336922 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336922 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336922 IGF1 CACTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A TGGGTAA NM_000618.2) is another GAM336922 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336922 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336922 is therefore inhibition of IGF1, a GAM336922 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336922 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336922 PRND CACTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGTAA another GAM336922 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336922 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336922 is therefore inhibition of PRND, a GAM336922 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336922 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM336923 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336923 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336923 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336923 is therefore inhibition of APPBP2, a GAM336923 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336923 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336923 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336923 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336923 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336923 is therefore inhibition of BACE2, a GAM336923 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336923 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336923 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336923 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336923 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336923 is therefore inhibition of FHL2, a GAM336923 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336923 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336923 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A GGGCAAC NM_000618.2) is another GAM336923 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336923 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336923 is therefore inhibition of IGF1, a GAM336923 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336923 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336923 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336923 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336923 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336923 is therefore inhibition of MME, a GAM336923 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336923 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM25.

GAM336923 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336923 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336923 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336923 is therefore inhibition of PRND, a GAM336923 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336923 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336924 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336924 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336924 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336924 is therefore inhibition of APP. Accordingly, utilities of GAM336924 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336925 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336925 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336925 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336925 is therefore inhibition of APPBP2, a GAM336925 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336925 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336925 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336925 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336925 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336925 is therefore inhibition of BACE2, a GAM336925 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336925 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336925 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336925 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336925 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336925 is therefore inhibition of FHL2, a GAM336925 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336925 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336925 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336925 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336925 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336925 is therefore inhibition of IGF1, a GAM336925 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336925 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336925 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336925 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336925 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336925 is therefore inhibition of MME, a GAM336925 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336925 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336925 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336925 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336925 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336925 is therefore inhibition of PRND, a GAM336925 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336925 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with

various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336926 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336926 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336926 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336926 is therefore inhibition of APPBP2, a GAM336926 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336926 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336926 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336926 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336926 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336926 is therefore inhibition of BACE2, a GAM336926 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336926 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336926 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336926 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM336926 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336926 is therefore inhibition of FHL2, a GAM336926 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336926 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336926 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336926 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336926 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336926 is therefore inhibition of IGF1, a GAM336926 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336926 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336926 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336926 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336926 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336926 is therefore inhibition of MME, a GAM336926 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336926 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336926 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336926 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336926 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336926 is therefore inhibition of PRND, a GAM336926 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336926 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336927 FOS TTAGAAAGAATATTG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
CCAGTCC Accession NM_005252.2) is a GAM336927 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336927 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336927 is therefore inhibition of FOS, a GAM336927 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM336927 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM336931 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336931 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336931 RNA are set forth in Tables 6 and 7, hereby incorporated

herein.

A function of GAM336931 is therefore inhibition of APPBP2, a GAM336931 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336931 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336931 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336931 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336931 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336931 is therefore inhibition of BACE2, a GAM336931 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336931 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336931 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336931 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336931 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336931 is therefore inhibition of FHL2, a GAM336931 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336931 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM336931 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336931 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336931 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336931 is therefore inhibition of IGF1, a GAM336931 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336931 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336931 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336931 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336931 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336931 is therefore inhibition of MME, a GAM336931 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336931 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336931 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336931 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336931 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336931 is therefore inhibition of PRND, a GAM336931 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336931 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336932 ADAM17 GGCTGGAGAGTAAAT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

CAGGTCT factor, (ADAM17, Accession NM_021832.1) is a GAM336932 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336932 is therefore inhibition of ADAM17, a GAM336932 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336932 APPBP2 GGCTGGAGAGTAAAT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CAGGTCT Protein 2 (APPBP2, Accession NM_006380.2) is another GAM336932 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336932 is therefore inhibition of APPBP2, a GAM336932 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336932 GFAP GGCTGGAGAGTAAAT GFAP (Accession NM_002055.2) is another GAM336932 target gene. A A

CAGGTCT GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336932 is therefore inhibition of GFAP. Accordingly, utilities of GAM336932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336932 GLUL GGCTGGAGAGTAAAT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

CAGGTCT NM_002065.3) is another GAM336932 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336932 is therefore inhibition of GLUL, a GAM336932 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336932 OGDH GGCTGGAGAGTAAAT Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A

CAGGTCT NM_002541.1) is another GAM336932 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336932 is therefore inhibition of OGDH, a GAM336932 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM336932 PRNP GGCTGGAGAGTAAAT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A

CAGGTCT Strausler- (PRNP, Accession NM_000311.1) is another GAM336932 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336932 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336932 is therefore inhibition of PRNP, a GAM336932 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336932 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336933 AVP TCTTGTGAAATCTGT AVP (Accession NM_000490.2) is a GAM336933 target gene. AVP A A

GGACCCT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336933 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336933 is therefore inhibition of AVP. Accordingly, utilities of GAM336933 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM336934 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336934 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336934 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336934 is therefore inhibition of APPBP2, a GAM336934 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336934 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336934 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM336934 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336934 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336934 is therefore inhibition of BACE2, a GAM336934 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336934 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336934 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336934 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336934 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336934 is therefore inhibition of FHL2, a GAM336934 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336934 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336934 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336934 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336934 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336934 is therefore inhibition of IGF1, a GAM336934 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336934 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336934 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336934 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336934 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336934 is therefore inhibition of MME, a GAM336934 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336934 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336934 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336934 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336934 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336934 is therefore inhibition of PRND, a GAM336934 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336934 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336937 IL1B TAAGGAGCACACAAC CTAGATT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is a GAM336937 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336937 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336937 is therefore inhibition of IL1B, a GAM336937 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336937 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM336938 IL1B TAAGGAGCACACAAC CTAGATT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is a GAM336938 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336938 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336938 is therefore inhibition of IL1B, a GAM336938 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336938 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM336939 CASP3 TTTCATTCATTTCTT TCATGGA Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is a GAM336939 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336939 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336939 is therefore inhibition of CASP3, a GAM336939 target gene which is one apoptosis- related cysteine

protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336939 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM336939 FPRL1 TTTCATTCATTTCTT FPRL1 (Accession NM_001462.1) is another GAM336939 target gene. A A

TCATGGA FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336939 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336939 is therefore inhibition of FPRL1. Accordingly, utilities of GAM336939 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM336939 GLUL TTTCATTCATTTCTT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

TCATGGA NM_002065.3) is another GAM336939 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336939 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336939 is therefore inhibition of GLUL, a GAM336939 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336939 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM336941 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336941 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336941 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336941 is therefore inhibition of APP.

Accordingly, utilities of GAM336941 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336942 HD AAAGACTTGGCTGTC HD (Accession NM_002111.3) is a GAM336942 target gene. HD A A

AGCCCTG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336942 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336942 is therefore inhibition of HD. Accordingly, utilities of GAM336942 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336945 FHL2 AGTGAGCTATGATCA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGCCGGT a GAM336945 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336945 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336945 is therefore inhibition of FHL2, a GAM336945 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336945 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336945 IGF1 AGTGAGCTATGATCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGCCGGT NM_000618.2) is another GAM336945 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336945 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336945 is therefore inhibition of IGF1, a GAM336945 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336945 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336945 PRND AGTGAGCTATGATCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGCCGGT another GAM336945 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336945 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336945 is therefore inhibition of PRND, a GAM336945 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336945 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336946 APP GGAGCTGTAGTTTTT APP (Accession NM_000484.1) is a GAM336946 target gene. APP A A CCCACAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336946 is therefore inhibition of APP. Accordingly, utilities of GAM336946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336946 BACE GGAGCTGTAGTTTTT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A CCCACAT is another GAM336946 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336946 is therefore inhibition of BACE, a GAM336946 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and

therefore is associated with Alzheimer. Accordingly, utilities of GAM336946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336946 IGF1 GGAGCTGTAGTTTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CCCACAT NM_000618.2) is another GAM336946 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336946 is therefore inhibition of IGF1, a GAM336946 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336946 PRNP GGAGCTGTAGTTTTT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A
CCCACAT Strausler- (PRNP, Accession NM_000311.1) is another GAM336946 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336946 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336946 is therefore inhibition of PRNP, a GAM336946 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336946 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM336947 MAPT CAGTGGATGATGTTT Microtubule- associated Protein Tau (MAPT, Accession A A
TCTGTGG NM_016835.1) is a GAM336947 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple

transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336947 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336947 is therefore inhibition of MAPT, a GAM336947 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336947 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM336950 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336950 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336950 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336950 is therefore inhibition of APP. Accordingly, utilities of GAM336950 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336951 APP AGATGACACAGAGCT APP (Accession NM_000484.1) is a GAM336951 target gene. APP A A

CAGGAAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336951 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336951 is therefore inhibition of APP. Accordingly, utilities of GAM336951 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336956 APPBP2 GTCTTCCTCCGTCCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CACCTCC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336956 target gene. APPBP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336956 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM336956 is therefore inhibition of APPBP2, a GAM336956 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336956 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336956 BAX GTCTTCCTCCGTCCC BCL2- associated X Protein (BAX, Accession NM_138763.1) is another GAM336956 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336956 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

CACCTCC

Another function of GAM336956 is therefore inhibition of BAX, a GAM336956 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM336956 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM336956 HD GTCTTCCTCCGTCCC HD (Accession NM_002111.3) is another GAM336956 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336956 RNA are set forth in Tables 6 and 7, hereby incorporated herein. HD A A

CACCTCC

Another function of GAM336956 is therefore inhibition of HD. Accordingly, utilities of GAM336956 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336956 MPO GTCTTCCTCCGTCCC Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM336956 target gene. MPO BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336956 RNA are set forth in Tables 6 and A A

CACCTCC

7, hereby incorporated herein.

Another function of GAM336956 is therefore inhibition of MPO, a GAM336956 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336956 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM336956 NGB A A GTCTTCCTCCGTCCC CACCTCC Neuroglobin (NGB, Accession NM_021257.2) is another GAM336956 target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336956 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336956 is therefore inhibition of NGB, a GAM336956 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336956 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM336957 APLP1 A A TTAAACTTCCCTGCT GCCCCAG Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession NM_005166.2) is a GAM336957 target gene. APLP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336957 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336957 is therefore inhibition of APLP1, a GAM336957 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336957 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336958 ADAM10 A A AGGTGGAGTTTTGCT A Disintegrin and Metalloproteinase Domain 10 (ADAM10,

TTCCCAT Accession NM_001110.1) is a GAM336958 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336958 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336958 is therefore inhibition of ADAM10, a GAM336958 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336958 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM336958 BACE AGGTGGAGTTTTGCT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

TTCCCAT is another GAM336958 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336958 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336958 is therefore inhibition of BACE, a GAM336958 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336958 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336958 DHCR24 AGGTGGAGTTTTGCT 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TTCCCAT NM_014762.1) is another GAM336958 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336958 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336958 is therefore inhibition of DHCR24, a GAM336958 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM336958 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336959 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336959 target gene. APP
A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336959 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336959 is therefore inhibition of APP. Accordingly, utilities of GAM336959 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336961 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM336961 target gene. HD
A A

ACTTGTA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336961 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336961 is therefore inhibition of HD. Accordingly, utilities of GAM336961 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336961 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A

ACTTGTA NM_000868.1) is another GAM336961 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336961 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336961 is therefore inhibition of HTR2C, a GAM336961 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336961 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336961 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
ACTTGTA NM_000618.2) is another GAM336961 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336961 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336961 is therefore inhibition of IGF1, a GAM336961 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336961 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336961 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM336961 target gene. A A
ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336961 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336961 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336961 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336961 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM336961 target A A
ACTTGTA gene. TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336961 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336961 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336961 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with TNFRSF6.

GAM336962 BACE2 ATAACTGTGAAGAGG CAATTGT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is a GAM336962 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336962 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336962 is therefore inhibition of BACE2, a GAM336962 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336962 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336963 APLP1 AGCTCCAGGAGCTGG CAGGAGG Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession NM_005166.2) is a GAM336963 target gene. APLP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336963 is therefore inhibition of APLP1, a GAM336963 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM336963 BAX AGCTCCAGGAGCTGG CAGGAGG BCL2- associated X Protein (BAX, Accession NM_004324.2) is another GAM336963 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336963 is therefore inhibition of

BAX, a GAM336963 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM336963 CTSK AGCTCCAGGAGCTGG CTSK (Accession NM_000396.2) is another GAM336963 target gene. A A

CAGGAGG CTSK BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336963 is therefore inhibition of CTSK. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM336963 GFAP AGCTCCAGGAGCTGG GFAP (Accession NM_002055.2) is another GAM336963 target gene. A A

CAGGAGG GFAP BINDING SITE1 and GFAP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GFAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE1 and GFAP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336963 is therefore inhibition of GFAP. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM336963 MME AGCTCCAGGAGCTGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

CAGGAGG enkephalinase, (MME, Accession NM_007287.1) is another GAM336963 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336963 is therefore inhibition of MME, a GAM336963 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of

Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336963 NCSTN AGCTCCAGGAGCTGG NCSTN (Accession NM_015331.1) is another GAM336963 target gene. A A

CAGGAGG NCSTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336963 is therefore inhibition of NCSTN, a GAM336963 target gene which has a central role in presenilin- mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp-1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336963 S100B AGCTCCAGGAGCTGG S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A

CAGGAGG NM_006272.1) is another GAM336963 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336963 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336963 is therefore inhibition of S100B, a GAM336963 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336963 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM336964 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336964 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336964 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336964 is therefore inhibition of APP. Accordingly, utilities of GAM336964 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336965 GAL TGACAGAGGTACATA Galanin (GAL, Accession NM_015973.2) is a GAM336965 target A A
GGAGGCT gene. GAL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GAL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336965 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336965 is therefore inhibition of GAL, a GAM336965 target gene which stimulates LH secretion and enhances LHRH- induced LH release from dispersed anterior pituitary cells in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336965 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GAL.The function of GAL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3293.

GAM336965 MME TGACAGAGGTACATA Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGAGGCT enkephalinase, (MME, Accession NM_000902.2) is another GAM336965 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336965 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336965 is therefore inhibition of MME, a GAM336965 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336965 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336966 GAL TGACAGAGGTACATA Galanin (GAL, Accession NM_015973.2) is a GAM336966 target A A
GGAGGCT gene. GAL BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by GAL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GAL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336966 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336966 is therefore inhibition of GAL, a GAM336966 target gene which stimulates LH secretion and enhances LHRH- induced LH release from dispersed anterior pituitary cells in vitro. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336966 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GAL.The function of GAL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3293.

GAM336966 MME TGACAGAGGTACATA Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGAGGCT enkephalinase, (MME, Accession NM_000902.2) is another GAM336966 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336966 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336966 is therefore inhibition of MME, a GAM336966 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336966 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336967 CAV1 TTCCCTTAGGTCTGG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
AATGGTA NM_001753.3) is a GAM336967 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336967 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336967 is therefore inhibition of CAV1, a GAM336967 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336967

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM336968 APBA1 AGAGATAAAGAGGTT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

TAGGCAG 1 (X11) (APBA1, Accession NM_001163.2) is a GAM336968 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336968 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336968 is therefore inhibition of APBA1, a GAM336968 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336968 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336968 CNTF AGAGATAAAGAGGTT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

TAGGCAG another GAM336968 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336968 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336968 is therefore inhibition of CNTF, a GAM336968 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336968 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM336969 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336969 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM336969 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336969 is therefore inhibition of APP. Accordingly, utilities of GAM336969 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336970 IGF1 TGTGACTCGTACTTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TAATCCT NM_000618.2) is a GAM336970 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336970 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336970 is therefore inhibition of IGF1, a GAM336970 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336970 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336970 PRND TGTGACTCGTACTTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TAATCCT another GAM336970 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336970 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336970 is therefore inhibition of PRND, a GAM336970 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336970 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336971 IGF1 TGTGACTCGTACTTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TAATCCT NM_000618.2) is a GAM336971 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336971 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336971 is therefore inhibition of IGF1, a GAM336971 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336971 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336971 PRND TGTGACTCGTACTTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TAATCCT another GAM336971 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336971 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336971 is therefore inhibition of PRND, a GAM336971 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336971 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336972 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336972 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336972 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336972 is therefore inhibition of APP. Accordingly, utilities of GAM336972 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336974 ACE TGACTCAGTGGAAGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TCCAGAG (ACE, Accession NM_152831.1) is a GAM336974 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336974 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336974 is therefore inhibition of ACE, a GAM336974 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM336974 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336974 IGF1 TGACTCAGTGGAAGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TCCAGAG NM_000618.2) is another GAM336974 target gene. IGF1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336974 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336974 is therefore inhibition of IGF1, a GAM336974 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336974 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336975 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336975 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336975 is therefore inhibition of APPBP2, a GAM336975 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM336975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336975 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM336975 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336975 is therefore inhibition of BACE2, a GAM336975 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336975 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM336975 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336975 is therefore inhibition of FHL2, a GAM336975 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336975 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM336975 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336975 is therefore inhibition of IGF1, a GAM336975 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336975 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM336975 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336975 is therefore inhibition of MME, a GAM336975 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336975 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336975 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM336975 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM336975 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336975 is therefore inhibition of PRND, a GAM336975 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336975 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336976 APPBP2 ATGCCTGTAATCCCA GCACTTT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336976 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336976 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336976 is therefore inhibition of APPBP2, a GAM336976 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336976 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336976 IGF1 ATGCCTGTAATCCCA GCACTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM336976 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336976 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336976 is therefore inhibition of IGF1, a GAM336976 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336976 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336976 PRND ATGCCTGTAATCCCA GCACTTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336976 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. A A

Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336976 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336976 is therefore inhibition of PRND, a GAM336976 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336976 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336978 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM336978 target gene. HD A A

ACTTGTA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336978 is therefore inhibition of HD. Accordingly, utilities of GAM336978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336978 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

ACTTGTA NM_000868.1) is another GAM336978 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336978 is therefore inhibition of HTR2C, a GAM336978 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336978 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGTA NM_000618.2) is another GAM336978 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336978 is therefore inhibition of IGF1, a GAM336978 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336978 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM336978 target gene. A A

ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336978 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336978 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM336978 target A A

ACTTGTA gene. TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336978 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336978 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336978 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336979 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM336979 target gene. HD A A

ACTTGTA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336979 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336979 is therefore inhibition of HD. Accordingly, utilities of GAM336979 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336979 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
ACTTGTA NM_000868.1) is another GAM336979 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336979 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336979 is therefore inhibition of HTR2C, a GAM336979 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336979 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336979 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
ACTTGTA NM_000618.2) is another GAM336979 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336979 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336979 is therefore inhibition of IGF1, a GAM336979 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336979 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336979 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM336979 target gene. A A

ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336979 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336979 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336979 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336979 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM336979 target A A

ACTTGTA gene. TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336979 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336979 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336979 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336980 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM336980 target gene. HD A A

ACTTGTA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336980 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336980 is therefore inhibition of HD. Accordingly, utilities of GAM336980 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336980 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

ACTTGTA NM_000868.1) is another GAM336980 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336980 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336980 is therefore inhibition of HTR2C, a GAM336980 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336980 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336980 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
ACTTGTA NM_000618.2) is another GAM336980 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336980 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336980 is therefore inhibition of IGF1, a GAM336980 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336980 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336980 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_000447.1) is another GAM336980 target gene. A A
ACTTGTA PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336980 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336980 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336980 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336980 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152872.1) is another GAM336980 target A A
ACTTGTA gene. TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE1 and TNFRSF6 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336980 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336980 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336980 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336981 HD TCTGCTGTGATGGAC HD (Accession NM_002111.3) is a GAM336981 target gene. HD A A

ACTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336981 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336981 is therefore inhibition of HD. Accordingly, utilities of GAM336981 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM336981 HTR2C TCTGCTGTGATGGAC 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

ACTTGT NM_000868.1) is another GAM336981 target gene. HTR2C BINDING SITE1 and HTR2C BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2C, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE1 and HTR2C BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336981 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336981 is therefore inhibition of HTR2C, a GAM336981 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336981 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM336981 IGF1 TCTGCTGTGATGGAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGT NM_000618.2) is another GAM336981 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336981 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336981 is therefore inhibition of IGF1, a GAM336981 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336981 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336981 PSEN2 TCTGCTGTGATGGAC PSEN2 (Accession NM_012486.1) is another GAM336981 target gene. A A

ACTTGT PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336981 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336981 is therefore inhibition of PSEN2. Accordingly, utilities of GAM336981 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM336981 TNFRSF6 TCTGCTGTGATGGAC TNFRSF6 (Accession NM_152877.1) is another GAM336981 target A A

ACTTGT gene. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336981 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336981 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM336981 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM336983 HTR2A ATGTGTCTGGGACTC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A

TATGCCA NM_000621.1) is a GAM336983 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336983 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336983 is therefore inhibition of HTR2A, a GAM336983 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336983 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM336984 BACE TGTAGTTTGATGCTA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

GAACACT is a GAM336984 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336984 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336984 is therefore inhibition of BACE, a GAM336984 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM336984 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM336989 APPBP2 CTGAGGCAGGAGGGC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TCAGGAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336989 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336989 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336989 is therefore inhibition of APPBP2, a GAM336989 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336989 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336989 IGF1 CTGAGGCAGGAGGGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TCAGGAG NM_000618.2) is another GAM336989 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336989 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336989 is therefore inhibition of IGF1, a GAM336989 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336989 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336989 SLC17A7 CTGAGGCAGGAGGGC SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

TCAGGAG NM_020309.1) is another GAM336989 target gene. SLC17A7 BINDING SITE1 and SLC17A7 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SLC17A7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE1 and SLC17A7 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336989 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336989 is therefore inhibition of SLC17A7, a GAM336989 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM336989 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM336989 TGFB1 CTGAGGCAGGAGGGC TGFB1 (Accession NM_000660.1) is another GAM336989 target gene. A A

TCAGGAG TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TGFB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE1 and TGFB1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336989 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336989 is therefore inhibition of

TGFB1. Accordingly, utilities of GAM336989 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM336990 ADAM17 TGAGATGGTGTCATA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

TTGCTGG factor, (ADAM17, Accession NM_021832.1) is a GAM336990 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336990 is therefore inhibition of ADAM17, a GAM336990 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM336990 APBB2 TGAGATGGTGTCATA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TTGCTGG 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM336990 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336990 is therefore inhibition of APBB2, a GAM336990 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336990 CAV2 TGAGATGGTGTCATA Caveolin 2 (CAV2, Accession NM_001233.2) is another GAM336990 A A

TTGCTGG target gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM336990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336990 is therefore inhibition of CAV2, a GAM336990 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336990 IGF1 TGAGATGGTGTCATA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TTGCTGG NM_000618.2) is another GAM336990 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336990 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336990 is therefore inhibition of IGF1, a GAM336990 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336990 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336991 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM336991 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336991 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336991 is therefore inhibition of APP. Accordingly, utilities of GAM336991 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM336992 CAV2 CCGTAAAATGTTCAA Caveolin 2 (CAV2, Accession NM_001233.2) is a GAM336992 target A A
ATGTTTT gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336992 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336992 is therefore inhibition of CAV2, a GAM336992 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336992 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM336992 PRND AAAGCTTTGTTCATT GTATCTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM336992 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336992 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM336992 is therefore inhibition of PRND, a GAM336992 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336992 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336995 APPBP2 ATTGCACTCCAGCTT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336995 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336995 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336995 is therefore inhibition of APPBP2, a GAM336995 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336995 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336995 FHL2 ATTGCACTCCAGCTT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM336995 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336995 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336995 is therefore inhibition of FHL2, a GAM336995 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336995 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336995 IGF1 ATTGCACTCCAGCTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336995 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336995 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336995 is therefore inhibition of IGF1, a GAM336995 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336995 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336995 PRND ATTGCACTCCAGCTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336995 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM336995 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336995 is therefore inhibition of PRND, a GAM336995 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336995 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336996 APPBP2 ATTGCACTCCAGCTT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM336996 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336996 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM336996 is therefore inhibition of APPBP2, a GAM336996 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336996 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336996 FHL2 ATTGCACTCCAGCTT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM336996 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336996 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM336996 is therefore inhibition of FHL2, a GAM336996 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336996 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM336996 IGF1 ATTGCACTCCAGCTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM336996 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336996 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336996 is therefore inhibition of IGF1, a GAM336996 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM336996 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM336996 PRND ATTGCACTCCAGCTT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM336996 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM336996 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM336996 is therefore inhibition of PRND, a GAM336996 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM336996 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM336997 APP TAGGCCCATTAATAG APP (Accession NM_000484.1) is a GAM336997 target gene. APP A A

TGTACAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM336997 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM336997 is therefore inhibition of APP. Accordingly, utilities of GAM336997 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337000 APPBP2 GTATGTATTTATAGA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGTTCTT Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337000 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337000 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337000 is therefore inhibition of APPBP2, a GAM337000 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337000 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337000 CAV2 GTATGTATTTATAGA Caveolin 2 (CAV2, Accession NM_001233.2) is another GAM337000 A A
TGTTCTT target gene. CAV2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337000 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337000 is therefore inhibition of CAV2, a GAM337000 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337000 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337000 HD GTATGTATTTATAGA HD (Accession NM_002111.3) is another GAM337000 target gene. HD A A
TGTTCTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337000 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337000 is therefore inhibition of HD. Accordingly, utilities of GAM337000 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337000 MME GTATGTATTTATAGA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGTTCTT enkephalinase, (MME, Accession NM_000902.2) is another GAM337000 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337000 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337000 is therefore inhibition of MME, a GAM337000 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337000 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337001 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337001 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337001 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337001 is therefore inhibition of APPBP2, a GAM337001 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337001 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337001 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337001 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM337001 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337001 is therefore inhibition of BACE2, a GAM337001 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337001 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337001 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337001 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337001 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337001 is therefore inhibition of FHL2, a GAM337001 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337001 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337001 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337001 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337001 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337001 is therefore inhibition of IGF1, a GAM337001 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337001 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337001 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337001 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337001 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337001 is therefore inhibition of MME, a GAM337001 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337001 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337001 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337001 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337001 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337001 is therefore inhibition of PRND, a GAM337001 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337001 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337003 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337003 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337003 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337003 is therefore inhibition of APPBP2, a GAM337003 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337003 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337003 BACE2 CATTGCACTCCAGCC A A TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337003 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337003 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337003 is therefore inhibition of BACE2, a GAM337003 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337003 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337003 FHL2 CATTGCACTCCAGCC A A TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337003 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337003 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337003 is therefore inhibition of FHL2, a GAM337003 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337003 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337003 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337003 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337003 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337003 is therefore inhibition of HD. Accordingly, utilities of GAM337003 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337003 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337003 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337003 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337003 is therefore inhibition of IGF1, a GAM337003 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337003 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337003 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337003 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337003 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337003 is therefore inhibition of PRND, a GAM337003 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337003 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337004 IGF1 GAGGCGGGAAGCCCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CTAGGAG NM_000618.2) is a GAM337004 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337004 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337004 is therefore inhibition of IGF1, a GAM337004 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337004 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337004 RAGE GAGGCGGGAAGCCCA Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A
CTAGGAG GAM337004 target gene. RAGE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337004 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337004 is therefore inhibition of RAGE, a GAM337004 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM337004 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM337007 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337007 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of

GAM337007 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337007 is therefore inhibition of APPBP2, a GAM337007 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337007 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337007 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A
A
GGGCAAC NM_012105.3) is another GAM337007 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337007 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337007 is therefore inhibition of BACE2, a GAM337007 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337007 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337007 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A
GGGCAAC another GAM337007 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337007 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337007 is therefore inhibition of FHL2, a GAM337007 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337007 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM189.

GAM337007 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337007 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337007 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337007 is therefore inhibition of IGF1, a GAM337007 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337007 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337007 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337007 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337007 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337007 is therefore inhibition of MME, a GAM337007 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337007 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337007 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337007 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337007 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337007 is therefore inhibition of PRND, a GAM337007 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337007 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337008 IGF1 CATTTCAACTTTGTT GTTCTTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM337008 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337008 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337008 is therefore inhibition of IGF1, a GAM337008 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337008 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337009 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337009 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337009 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337009 is therefore inhibition of APP. Accordingly, utilities of GAM337009 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337010 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337010 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337010 A A

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337010 is therefore inhibition of APP. Accordingly, utilities of GAM337010 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337011 BACE TGCTAGGTTTTTTCC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

TTTCCCC is a GAM337011 target gene. BACE BINDING SITE1 and BACE BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by BACE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE1 and BACE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337011 is therefore inhibition of BACE, a GAM337011 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337011 GYPA TGCTAGGTTTTTTCC Glycophorin A (includes MN blood group) (GYPA, Accession A A

TTTCCCC NM_002099.2) is another GAM337011 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337011 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337011 is therefore inhibition of GYPA, a GAM337011 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337011 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337013 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337013 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM337013 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337013 is therefore inhibition of APP. Accordingly, utilities of GAM337013 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337015 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337015 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337015 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337015 is therefore inhibition of APPBP2, a GAM337015 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337015 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337015 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337015 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337015 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337015 is therefore inhibition of BACE2, a GAM337015 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337015 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337015 FHL2 CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337015 target gene. FHL2 BINDING SITE1 and FHL2 BINDING A A

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337015 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337015 is therefore inhibition of FHL2, a GAM337015 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337015 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337015 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337015 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337015 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337015 is therefore inhibition of HD. Accordingly, utilities of GAM337015 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337015 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337015 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337015 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337015 is therefore inhibition of IGF1, a GAM337015 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337015 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM337015 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM337015 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337015 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337015 is therefore inhibition of PRND, a GAM337015 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337015 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337016 ACHE TCTGAGTGGGAACTC Acetylcholinesterase (YT blood group) (ACHE, Accession A A TCATGAC NM_015831.1) is a GAM337016 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337016 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337016 is therefore inhibition of ACHE, a GAM337016 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337016 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM337017 TFCP2 AGGCAGAAAACAATT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is a A A CCAAGCA GAM337017 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337017 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337017 is therefore inhibition of TFCP2, a GAM337017 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337017 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337018 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337018 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337018 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337018 is therefore inhibition of APP. Accordingly, utilities of GAM337018 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337019 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337019 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337019 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337019 is therefore inhibition of APP. Accordingly, utilities of GAM337019 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337022 ACE TCAGTCGTTTCTCTC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TCCCAGC (ACE, Accession NM_152831.1) is a GAM337022 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337022 is therefore inhibition of ACE, a GAM337022 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337022 FLNB TCAGTCGTTTCTCTC A A TCCCAGC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is another GAM337022 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337022 is therefore inhibition of FLNB, a GAM337022 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM337022 GFAP TCAGTCGTTTCTCTC A A TCCCAGC GFAP (Accession NM_002055.2) is another GAM337022 target gene. GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337022 is therefore inhibition of GFAP. Accordingly, utilities of GAM337022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337022 TGFB1 TCAGTCGTTTCTCTC A A TCCCAGC TGFB1 (Accession NM_000660.1) is another GAM337022 target gene. TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337022 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337022 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337022 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337023 APBB1 CCCTTTAGTAACTTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CAGGGTC 1 (Fe65) (APBB1, Accession NM_145689.1) is a GAM337023 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337023 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337023 is therefore inhibition of APBB1, a GAM337023 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337023 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337024 APBB1 CCCTTTAGTAACTTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CAGGGTC 1 (Fe65) (APBB1, Accession NM_145689.1) is a GAM337024 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337024 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337024 is therefore inhibition of APBB1, a GAM337024 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337024 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337025 FHL2 TCATCCTTTTCTGCA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

ACCTGTT a GAM337025 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337025 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337025 is therefore inhibition of FHL2, a GAM337025 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337025 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337025 FPRL1 TCATCCTTTTCTGCA FPRL1 (Accession NM_001462.1) is another GAM337025 target gene. A A

ACCTGTT FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337025 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337025 is therefore inhibition of FPRL1. Accordingly, utilities of GAM337025 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM337025 LRP1 TCATCCTTTTCTGCA Low Density Lipoprotein- related Protein 1 (alpha- 2- A A

ACCTGTT macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337025 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337025 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337025 is therefore inhibition of LRP1, a GAM337025 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337025 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337027 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337027 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and

secondary structure complementarity to the nucleotide sequence of GAM337027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337027 is therefore inhibition of APPBP2, a GAM337027 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337027 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337027 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337027 is therefore inhibition of BACE2, a GAM337027 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337027 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337027 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337027 is therefore inhibition of FHL2, a GAM337027 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337027 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337027 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337027 is therefore inhibition of IGF1, a GAM337027 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337027 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337027 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337027 is therefore inhibition of MME, a GAM337027 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337027 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337027 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide

sequence of GAM337027 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337027 is therefore inhibition of PRND, a GAM337027 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337027 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337028 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337028 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337028 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337028 is therefore inhibition of APPBP2, a GAM337028 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337028 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337028 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337028 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337028 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337028 is therefore inhibition of BACE2, a GAM337028 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337028 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337028 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337028 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337028 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337028 is therefore inhibition of FHL2, a GAM337028 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337028 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337028 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337028 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337028 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337028 is therefore inhibition of IGF1, a GAM337028 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337028 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337028 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337028 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337028 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337028 is therefore inhibition of MME, a GAM337028 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337028 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337028 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337028 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337028 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337028 is therefore inhibition of PRND, a GAM337028 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337028 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337029 CAV1 TGGGAAAAAAGGCAG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A

TTTAGAA NM_001753.3) is a GAM337029 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337029 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337029 is therefore inhibition of CAV1, a GAM337029 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337029 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337030 CAV1 TGGGAAAAAAGGCAG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A

TTTAGAA NM_001753.3) is a GAM337030 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337030 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337030 is therefore inhibition of CAV1, a GAM337030 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337030 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337031 APBB1 AATGGCAGTCCCTGG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

AGCAGGA 1 (Fe65) (APBB1, Accession NM_145689.1) is a GAM337031 target gene. APBB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337031 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337031 is therefore inhibition of APBB1, a GAM337031 target gene which may modulate the internalization of beta- amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337031 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB1.The function of APBB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337031 SLC17A7 AATGGCAGTCCCTGG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

AGCAGGA NM_020309.1) is another GAM337031 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337031 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337031 is therefore inhibition of SLC17A7, a GAM337031 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337031 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337032 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337032 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337032 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337032 is therefore inhibition of APPBP2, a GAM337032 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337032 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337032 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337032 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337032 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337032 is therefore inhibition of BACE2, a GAM337032 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337032 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337032 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337032 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337032 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337032 is therefore inhibition of FHL2, a GAM337032 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337032 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337032 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337032 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337032 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337032 is therefore inhibition of IGF1, a GAM337032 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337032 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337032 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337032 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337032 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337032 is therefore inhibition of MME, a GAM337032 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337032 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337032 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337032 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337032 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337032 is therefore inhibition of PRND, a GAM337032 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337032 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337033 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337033 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337033 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337033 is therefore inhibition of APPBP2, a GAM337033 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337033 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337033 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337033 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337033 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337033 is therefore inhibition of BACE2, a GAM337033 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337033 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337033 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337033 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337033 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337033 is therefore inhibition of FHL2, a GAM337033 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337033 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337033 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337033 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337033 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337033 is therefore inhibition of IGF1, a GAM337033 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337033 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337033 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337033 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337033 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337033 is therefore inhibition of MME, a GAM337033 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337033 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337033 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337033 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337033 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337033 is therefore inhibition of PRND, a GAM337033 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337033 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337035 AVP GTGTATGTGTGTATG AVP (Accession NM_000490.2) is a GAM337035 target gene. AVP A A
TCTGTGT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337035 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337035 is therefore inhibition of AVP. Accordingly, utilities of GAM337035 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM337036 ADAM10 AGGAAACATCCTCCC A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A
CCTTGTT Accession NM_001110.1) is a GAM337036 target gene. ADAM10 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337036 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337036 is therefore inhibition of ADAM10, a GAM337036 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337036 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337037 GLUL TAAGCAGTCTTTCTT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
CTTCTTC NM_002065.3) is a GAM337037 target gene. GLUL BINDING SITE1 and GLUL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GLUL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE1 and GLUL BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337037 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337037 is therefore inhibition of GLUL, a GAM337037 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337037 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337037 HD TAAGCAGTCTTTCTT HD (Accession NM_002111.3) is another GAM337037 target gene. HD A A

CTTCTTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337037 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337037 is therefore inhibition of HD. Accordingly, utilities of GAM337037 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337037 HTR2C TAAGCAGTCTTTCTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

CTTCTTC NM_000868.1) is another GAM337037 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337037 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337037 is therefore inhibition of HTR2C, a GAM337037 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337037 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337038 GLUL TAAGCAGTCTTTCTT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

CTTCTTC NM_002065.3) is a GAM337038 target gene. GLUL BINDING SITE1 and GLUL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GLUL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE1 and GLUL BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337038 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337038 is therefore inhibition of GLUL, a GAM337038 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337038 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337038 HD TAAGCAGTCTTTCTT HD (Accession NM_002111.3) is another GAM337038 target gene. HD
A A
CTTCTTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337038 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337038 is therefore inhibition of HD. Accordingly, utilities of GAM337038 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337038 HTR2C TAAGCAGTCTTTCTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A
CTTCTTC NM_000868.1) is another GAM337038 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337038 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337038 is therefore inhibition of HTR2C, a GAM337038 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337038 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337039 GLUL TAAGCAGTCTTTCTT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession
A A
CTTCTTC NM_002065.3) is a GAM337039 target gene. GLUL BINDING SITE1 and GLUL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GLUL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE1 and GLUL BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337039 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337039 is therefore inhibition of GLUL, a GAM337039 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337039 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has

been established by previous studies, as described hereinabove with reference to GAM519.

GAM337039 HD TAAGCAGTCTTTCTT HD (Accession NM_002111.3) is another GAM337039 target gene. HD
A A
CTTCTTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337039 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337039 is therefore inhibition of HD. Accordingly, utilities of GAM337039 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337039 HTR2C TAAGCAGTCTTTCTT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A
CTTCTTC NM_000868.1) is another GAM337039 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337039 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337039 is therefore inhibition of HTR2C, a GAM337039 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337039 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337041 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A
GGGTGAC a GAM337041 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337041 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337041 is therefore inhibition of FHL2, a GAM337041 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337041 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337041 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGTGAC NM_000618.2) is another GAM337041 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337041 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337041 is therefore inhibition of IGF1, a GAM337041 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337041 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337041 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTGAC another GAM337041 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337041 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337041 is therefore inhibition of PRND, a GAM337041 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337041 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337042 BACE GGAGTATGAGAGAGA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A
ATGGGAC is a GAM337042 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337042 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337042 is therefore inhibition of BACE, a GAM337042 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337042 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337042 BACE2 GGAGTATGAGAGAGA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

ATGGGAC NM_138991.1) is another GAM337042 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337042 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337042 is therefore inhibition of BACE2, a GAM337042 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337042 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337042 CNTF GGAGTATGAGAGAGA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

ATGGGAC another GAM337042 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337042 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337042 is therefore inhibition of CNTF, a GAM337042 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337042 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337042 HD GGAGTATGAGAGAGA HD (Accession NM_002111.3) is another GAM337042 target gene. HD A A

ATGGGAC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337042 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337042 is therefore inhibition of HD. Accordingly, utilities of GAM337042 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337043 ACE TTTTCTGGGCTCCCT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TTTCTGC (ACE, Accession NM_152831.1) is a GAM337043 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337043 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337043 is therefore inhibition of ACE, a GAM337043 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337043 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337043 LRP1 TTTTCTGGGCTCCCT Low Density Lipoprotein- related Protein 1 (alpha- 2- A A

TTTCTGC macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337043 target gene. LRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337043 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337043 is therefore inhibition of LRP1, a GAM337043 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337043 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM1975.

GAM337043 OGDH TTTTCTGGGCTCCCT Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A
TTTCTGC NM_002541.1) is another GAM337043 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337043 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337043 is therefore inhibition of OGDH, a GAM337043 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337043 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM337043 OLR1 TTTTCTGGGCTCCCT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A
TTTCTGC (OLR1, Accession NM_002543.1) is another GAM337043 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337043 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337043 is therefore inhibition of OLR1, a GAM337043 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337043 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337045 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337045 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337045 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337045 is therefore inhibition of APP. Accordingly, utilities of GAM337045 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with APP.

GAM337046 MME AGTGGCTTTGAAACT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GTAATGA enkephalinase, (MME, Accession NM_007288.1) is a GAM337046 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337046 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337046 is therefore inhibition of MME, a GAM337046 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337046 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337047 PLAU TAAGGAGTGGTTCCA Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

ATTTGGG is a GAM337047 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337047 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337047 is therefore inhibition of PLAU, a GAM337047 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337047 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337051 IGF1 GGCTGCAGTGCAACT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CTTTCTA NM_000618.2) is a GAM337051 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337051 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337051 is therefore inhibition of IGF1, a

GAM337051 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337051 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337052 IGF1 GGCTGCAGTGCAACT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A CTTTCTA NM_000618.2) is a GAM337052 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337052 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337052 is therefore inhibition of IGF1, a GAM337052 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337052 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337053 SNCA TTGATCACAGCTACT SNCA (Accession NM_000345.2) is a GAM337053 target gene. SNCA A A TTTGTCC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337053 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337053 is therefore inhibition of SNCA. Accordingly, utilities of GAM337053 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM337055 IGF1 AAGCTGCCATTGAAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A ATCTGGG NM_000618.2) is a GAM337055 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337055 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337055 is therefore inhibition of IGF1, a GAM337055 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337055 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337055 MAPK10 AAGCTGCCATTGAAG ATCTGGG A A Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_002753.2) is another GAM337055 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337055 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337055 is therefore inhibition of MAPK10, a GAM337055 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337055 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337056 IGF1 AAGCTGCCATTGAAG ATCTGGG A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM337056 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337056 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337056 is therefore inhibition of IGF1, a GAM337056 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337056 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337056 MAPK10 AAGCTGCCATTGAAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

ATCTGGG NM_002753.2) is another GAM337056 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337056 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337056 is therefore inhibition of MAPK10, a GAM337056 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337056 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337057 IGF1 AAGCTGCCATTGAAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ATCTGGG NM_000618.2) is a GAM337057 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337057 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337057 is therefore inhibition of IGF1, a GAM337057 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337057 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337057 MAPK10 AAGCTGCCATTGAAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

ATCTGGG NM_002753.2) is another GAM337057 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337057 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337057 is therefore inhibition of MAPK10, a GAM337057 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337057 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337058 IGF1 AAGCTGCCATTGAAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A ATCTGGG NM_000618.2) is a GAM337058 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337058 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337058 is therefore inhibition of IGF1, a GAM337058 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337058 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337058 MAPK10 AAGCTGCCATTGAAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A ATCTGGG NM_002753.2) is another GAM337058 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337058 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337058 is therefore inhibition of MAPK10, a GAM337058 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337058 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove

with reference to GAM55.

GAM337059 ADAM17 CCAAAGTGCTGGGAT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A
TACAGGC factor, (ADAM17, Accession NM_021832.1) is a GAM337059 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337059 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337059 is therefore inhibition of ADAM17, a GAM337059 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337059 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337059 GFAP CCAAAGTGCTGGGAT GFAP (Accession NM_002055.2) is another GAM337059 target gene. A A
TACAGGC GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337059 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337059 is therefore inhibition of GFAP. Accordingly, utilities of GAM337059 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337059 HTR2A CCAAAGTGCTGGGAT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
TACAGGC NM_000621.1) is another GAM337059 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337059 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337059 is therefore inhibition of HTR2A, a GAM337059 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337059 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337059 IAPP CCAAAGTGCTGGGAT Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A

TACAGGC another GAM337059 target gene. IAPP BINDING SITE1 and IAPP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IAPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE1 and IAPP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337059 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337059 is therefore inhibition of IAPP, a GAM337059 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337059 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337059 MTNR1A CCAAAGTGCTGGGAT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

TACAGGC another GAM337059 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337059 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337059 is therefore inhibition of MTNR1A, a GAM337059 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337059 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337059 TGFB1 CCAAAGTGCTGGGAT TGFB1 (Accession NM_000660.1) is another GAM337059 target gene. A A

TACAGGC TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337059 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337059 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337059 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337060 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337060 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337060 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337060 is therefore inhibition of APPBP2, a GAM337060 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337060 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337060 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337060 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337060 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337060 is therefore inhibition of BACE2, a GAM337060 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337060 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337060 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337060 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337060 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337060 is therefore inhibition of FHL2, a GAM337060 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337060 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337060 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337060 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337060 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337060 is therefore inhibition of IGF1, a GAM337060 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337060 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337060 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337060 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337060 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337060 is therefore inhibition of

MME, a GAM337060 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337060 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337060 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337060 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337060 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337060 is therefore inhibition of PRND, a GAM337060 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337060 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337061 CTNND2 TACAGTTCTGGTTTC Catenin (cadherin- associated protein), Delta 2 (neural A A
TTCTTTA plakophilin- rel (CTNND2, Accession NM_001332.1) is a GAM337061 target gene. CTNND2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTNND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTNND2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337061 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337061 is therefore inhibition of CTNND2, a GAM337061 target gene which interacts with presenilin 1 (PSEN1) and is a member of the plakoglobin/armadillo family. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337061 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTNND2.The function of CTNND2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM337061 PSEN1 TACAGTTCTGGTTTC PSEN1 (Accession NM_000021.2) is another GAM337061 target gene. A A
TTCTTTA PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337061 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337061 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337061 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337062 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337062 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337062 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337062 is therefore inhibition of APPBP2, a GAM337062 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337062 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337062 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337062 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337062 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337062 is therefore inhibition of BACE2, a GAM337062 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337062 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337062 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337062 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337062 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337062 is therefore inhibition of FHL2, a GAM337062 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337062 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337062 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337062 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337062 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337062 is therefore inhibition of IGF1, a GAM337062 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337062 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337062 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337062 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337062 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337062 is therefore inhibition of MME, a GAM337062 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337062 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337062 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM337062 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337062 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337062 is therefore inhibition of PRND, a GAM337062 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337062 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337063 GYPA GGTTCTCAAATGAGG Glycophorin A (includes MN blood group) (GYPA, Accession A A GACATTT NM_002099.2) is a GAM337063 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337063 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337063 is therefore inhibition of GYPA, a GAM337063 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337063 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337063 NGB GGTTCTCAAATGAGG Neuroglobin (NGB, Accession NM_021257.2) is another GAM337063 A A GACATTT target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337063 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337063 is therefore inhibition of NGB, a GAM337063 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337063 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337063 PLAU GGTTCTCAAATGAGG Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GACATTT is another GAM337063 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337063 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337063 is therefore inhibition of PLAU, a GAM337063 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337063 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337063 PSEN1 GGTTCTCAAATGAGG PSEN1 (Accession NM_000021.2) is another GAM337063 target gene. A A

GACATTT PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337063 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337063 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337063 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337063 CHAT ACATTTCCAATGTTT Choline Acetyltransferase (CHAT, Accession NM_020986.1) is B A

GGGGACA another GAM337063 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337063 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337063 is therefore inhibition of CHAT, a GAM337063 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337063 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337064 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337064 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337064 is therefore inhibition of APPBP2, a GAM337064 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337064 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337064 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337064 is therefore inhibition of

BACE2, a GAM337064 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337064 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337064 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337064 is therefore inhibition of FHL2, a GAM337064 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337064 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337064 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337064 is therefore inhibition of IGF1, a GAM337064 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337064 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337064 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337064 is therefore inhibition of MME, a GAM337064 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337064 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337064 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337064 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337064 is therefore inhibition of PRND, a GAM337064 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337064 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337066 TNFSF5 AAGTGGCTTTTGTCT TNFSF5 (Accession NM_000074.1) is a GAM337066 target gene. A A

GGCAGAT TNFSF5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TNFSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337066 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337066 is therefore inhibition of TNFSF5. Accordingly, utilities of GAM337066 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFSF5.

GAM337068 APBB2 AGTCAGGGAGACTGT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CAGTAAA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337068 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337068 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337068 is therefore inhibition of APBB2, a GAM337068 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337068 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337068 NGB AGTCAGGGAGACTGT Neuroglobin (NGB, Accession NM_021257.2) is another GAM337068 A A

CAGTAAA target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337068 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337068 is therefore inhibition of NGB, a GAM337068 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337068 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337069 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337069 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337069 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337069 is therefore inhibition of APPBP2, a GAM337069 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337069 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337069 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337069 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337069 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337069 is therefore inhibition of BACE2, a GAM337069 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337069 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337069 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337069 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337069 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337069 is therefore inhibition of FHL2, a GAM337069 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337069 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337069 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM337069 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337069 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337069 is therefore inhibition of IGF1, a GAM337069 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337069 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337069 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337069 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337069 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337069 is therefore inhibition of MME, a GAM337069 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337069 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337069 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM337069 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337069 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337069 is therefore inhibition of PRND, a GAM337069 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337069 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337070 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337070 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337070 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337070 is therefore inhibition of APPBP2, a GAM337070 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337070 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337070 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337070 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337070 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337070 is therefore inhibition of BACE2, a GAM337070 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337070 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337070 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337070 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337070 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337070 is therefore inhibition of FHL2, a GAM337070 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337070 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337070 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337070 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337070 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337070 is therefore inhibition of IGF1, a GAM337070 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337070 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337070 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337070 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337070 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337070 is therefore inhibition of

MME, a GAM337070 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337070 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337070 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337070 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337070 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A A

GGGCAAC

Another function of GAM337070 is therefore inhibition of PRND, a GAM337070 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337070 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337071 DHCR24 AGGCTGAGTGCAGTG 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM337071 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337071 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A A

GTGTGAT

A function of GAM337071 is therefore inhibition of DHCR24, a GAM337071 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337071 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337071 FPRL1 AGGCTGAGTGCAGTG FPRL1 (Accession NM_001462.1) is another GAM337071 target gene. FPRL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FPRL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

A A

GTGTGAT

BINDING SITE III of Fig.8. Nucleotide sequences of FPRL1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337071 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337071 is therefore inhibition of FPRL1. Accordingly, utilities of GAM337071 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FPRL1.

GAM337071 HTR2A AGGCTGAGTGCAGTG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
GTGTGAT NM_000621.1) is another GAM337071 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337071 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337071 is therefore inhibition of HTR2A, a GAM337071 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337071 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337071 IAPP AGGCTGAGTGCAGTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
GTGTGAT another GAM337071 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337071 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337071 is therefore inhibition of IAPP, a GAM337071 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337071 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337074 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337074 target

gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337074 is therefore inhibition of APPBP2, a GAM337074 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337074 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM337074 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337074 is therefore inhibition of BACE2, a GAM337074 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337074 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM337074 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337074 is therefore inhibition of FHL2, a GAM337074 target gene which Contains four LIM domains and an

additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337074 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337074 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337074 is therefore inhibition of HD. Accordingly, utilities of GAM337074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337074 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337074 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337074 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337074 is therefore inhibition of IGF1, a GAM337074 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337074 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337074 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337074 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337074 is therefore inhibition of PRND, a GAM337074 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337074 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337075 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337075 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337075 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337075 is therefore inhibition of APPBP2, a GAM337075 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337075 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337075 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337075 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337075 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337075 is therefore inhibition of BACE2, a GAM337075 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337075 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337075 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337075 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337075 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337075 is therefore inhibition of FHL2, a GAM337075 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337075 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337075 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337075 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337075 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337075 is therefore inhibition of HD. Accordingly, utilities of GAM337075 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337075 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337075 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337075 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337075 is therefore inhibition of IGF1, a GAM337075 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337075 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337075 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337075 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337075 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337075 is therefore inhibition of PRND, a GAM337075 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337075 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337076 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337076 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337076 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337076 is therefore inhibition of APPBP2, a GAM337076 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337076 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337076 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337076 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337076 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337076 is therefore inhibition of BACE2, a GAM337076 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337076 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337076 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337076 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337076 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337076 is therefore inhibition of FHL2, a GAM337076 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337076 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337076 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337076 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337076 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337076 is therefore inhibition of HD. Accordingly, utilities of GAM337076 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337076 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337076 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in

untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337076 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337076 is therefore inhibition of IGF1, a GAM337076 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337076 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337076 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337076 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337076 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337076 is therefore inhibition of PRND, a GAM337076 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337076 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337077 GYPA GGTTCTCAAATGAGG Glycophorin A (includes MN blood group) (GYPA, Accession A A

GACATTT NM_002099.2) is a GAM337077 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337077 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337077 is therefore inhibition of GYPA, a GAM337077 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337077 include diagnosis, prevention and treatment of Alzheimer,

and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337077 NGB A A GGTTCTCAAATGAGG GACATTT Neuroglobin (NGB, Accession NM_021257.2) is another GAM337077 target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337077 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337077 is therefore inhibition of NGB, a GAM337077 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337077 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337077 PLAU A A GGTTCTCAAATGAGG GACATTT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) is another GAM337077 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337077 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337077 is therefore inhibition of PLAU, a GAM337077 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337077 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337077 PSEN1 A A GGTTCTCAAATGAGG GACATTT PSEN1 (Accession NM_000021.2) is another GAM337077 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337077 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337077 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337077 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337077 CHAT ACATTTCCAATGTTT GGGGACA Choline Acetyltransferase (CHAT, Accession NM_020986.1) is another GAM337077 target gene. CHAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CHAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CHAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337077 RNA are set forth in Tables 6 and 7, hereby incorporated herein. B A

Another function of GAM337077 is therefore inhibition of CHAT, a GAM337077 target gene which synthesizes the neurotransmitter acetylcholine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337077 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CHAT.The function of CHAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337078 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337078 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337078 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337078 is therefore inhibition of APPBP2, a GAM337078 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337078 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337078 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of A A

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337078 is therefore inhibition of BACE2, a GAM337078 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337078 FHL2 A ACTGCACTCCAGCCT A Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337078 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

GGGCAAC

Another function of GAM337078 is therefore inhibition of FHL2, a GAM337078 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337078 IGF1 A ACTGCACTCCAGCCT A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337078 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

GGGCAAC

Another function of GAM337078 is therefore inhibition of IGF1, a GAM337078 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM337078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337078 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337078 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337078 is therefore inhibition of MME, a GAM337078 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337078 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337078 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337078 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337078 is therefore inhibition of PRND, a GAM337078 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337078 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337079 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337079 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337079 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337079 is therefore inhibition of APPBP2, a GAM337079 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337079 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337079 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337079 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337079 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337079 is therefore inhibition of BACE2, a GAM337079 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337079 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337079 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337079 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337079 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337079 is therefore inhibition of FHL2, a GAM337079 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337079 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337079 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337079 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337079 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337079 is therefore inhibition of IGF1, a GAM337079 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337079 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337079 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337079 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337079 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337079 is therefore inhibition of MME, a GAM337079 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337079 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337079 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337079 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337079 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337079 is therefore inhibition of PRND, a GAM337079 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337079 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337080 ADAMTS5 ATGATGAGTCTTAGT A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GATCTGG Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM337080 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337080 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337080 is therefore inhibition of ADAMTS5, a GAM337080 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337080 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337081 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337081 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337081 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337081 is therefore inhibition of APPBP2, a GAM337081 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337081 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337081 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337081 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337081 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337081 is therefore inhibition of BACE2, a GAM337081 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337081 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337081 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337081 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337081 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337081 is therefore inhibition of FHL2, a GAM337081 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337081 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337081 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337081 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337081 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337081 is therefore inhibition of IGF1, a GAM337081 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337081 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337081 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337081 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337081 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337081 is therefore inhibition of MME, a GAM337081 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337081 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337081 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337081 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337081 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337081 is therefore inhibition of PRND, a GAM337081 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337081 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with

various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337082 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337082 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337082 is therefore inhibition of APPBP2, a GAM337082 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337082 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337082 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337082 is therefore inhibition of BACE2, a GAM337082 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337082 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337082 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM337082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337082 is therefore inhibition of FHL2, a GAM337082 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337082 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337082 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337082 is therefore inhibition of IGF1, a GAM337082 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337082 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337082 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337082 is therefore inhibition of MME, a GAM337082 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337082 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337082 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337082 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337082 is therefore inhibition of PRND, a GAM337082 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337082 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337083 FHL2 ACTGTACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

AGGCAAC a GAM337083 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337083 is therefore inhibition of FHL2, a GAM337083 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337083 IGF1 ACTGTACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AGGCAAC NM_000618.2) is another GAM337083 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337083 is therefore inhibition of IGF1, a GAM337083 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337083 PRND ACTGTACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

AGGCAAC another GAM337083 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337083 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337083 is therefore inhibition of PRND, a GAM337083 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337083 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337084 FHL2 ACTGTACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

AGGCAAC a GAM337084 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337084 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337084 is therefore inhibition of FHL2, a GAM337084 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337084 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337084 IGF1 ACTGTACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AGGCAAC NM_000618.2) is another GAM337084 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337084 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337084 is therefore inhibition of IGF1, a GAM337084 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337084 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337084 PRND ACTGTACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

AGGCAAC another GAM337084 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337084 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337084 is therefore inhibition of PRND, a GAM337084 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337084 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337087 ACE ATTGCTTGAGCCCAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GAGTTCA (ACE, Accession NM_152831.1) is a GAM337087 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337087 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337087 is therefore inhibition of ACE, a GAM337087 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with

Alzheimer. Accordingly, utilities of GAM337087 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337087 GFAP ATTGCTTGAGCCCAG GFAP (Accession NM_002055.2) is another GAM337087 target gene. A A

GAGTTCA GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337087 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337087 is therefore inhibition of GFAP. Accordingly, utilities of GAM337087 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337087 IGF1 ATTGCTTGAGCCCAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GAGTTCA NM_000618.2) is another GAM337087 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337087 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337087 is therefore inhibition of IGF1, a GAM337087 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337087 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337087 PRND ATTGCTTGAGCCCAG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GAGTTCA another GAM337087 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337087 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337087 is therefore inhibition of PRND, a GAM337087 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337087 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337088 PSEN1 TTCCCCATGTGATGC PSEN1 (Accession NM_000021.2) is a GAM337088 target gene. PSEN1 A A

TATTGCT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337088 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337088 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337088 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337089 PSEN1 TTCCCCATGTGATGC PSEN1 (Accession NM_000021.2) is a GAM337089 target gene. PSEN1 A A

TATTGCT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337089 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337089 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337089 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337091 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337091 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337091 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337091 is therefore inhibition of APPBP2,

a GAM337091 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337091 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337091 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337091 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337091 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337091 is therefore inhibition of BACE2, a GAM337091 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337091 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337091 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337091 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337091 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337091 is therefore inhibition of FHL2, a GAM337091 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337091 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337091 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337091 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337091 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337091 is therefore inhibition of IGF1, a GAM337091 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337091 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337091 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337091 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337091 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337091 is therefore inhibition of MME, a GAM337091 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337091 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337091 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337091 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337091 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337091 is therefore inhibition of PRND, a GAM337091 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337091 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337092 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337092 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337092 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337092 is therefore inhibition of APP. Accordingly, utilities of GAM337092 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337093 ADAMTS5 TGGCAGGATTCCTGG A Disintegrin- like and Metalloprotease (reprolysin type) with A A

GATTTCA Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM337093 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337093 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337093 is therefore inhibition of ADAMTS5, a GAM337093 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337093 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337093 APPBP2 TGGCAGGATTCCTGG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GATTTCA Protein 2 (APPBP2, Accession NM_006380.2) is another GAM337093 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337093 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337093 is therefore inhibition of APPBP2, a GAM337093 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337093 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337094 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337094 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337094 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337094 is therefore inhibition of APP. Accordingly, utilities of GAM337094 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337095 APBB2 AAGGCTGTGTAGGCA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAATTCT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337095 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337095 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337095 is therefore inhibition of APBB2, a GAM337095 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337095 B2M AAGGCTGTGTAGGCA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another A A

GAATTCT GAM337095 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337095 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM337095 is therefore inhibition of B2M, a GAM337095 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM337095 PSEN1 AAGGCTGTGTAGGCA PSEN1 (Accession NM_007319.1) is another GAM337095 target gene. A A

GAATTCT PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337095 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337095 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337095 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337096 CTSB CACTGCACTCTAGCC CTSB (Accession NM_147782.1) is a GAM337096 target gene. CTSB A A

TCGGTGA BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337096 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337096 is therefore inhibition of CTSB. Accordingly, utilities of GAM337096 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM337096 FHL2 CACTGCACTCTAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TCGGTGA another GAM337096 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337096 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337096 is therefore inhibition of

FHL2, a GAM337096 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337096 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337096 IGF1 CACTGCACTCTAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCGGTGA NM_000618.2) is another GAM337096 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337096 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337096 is therefore inhibition of IGF1, a GAM337096 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337096 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337096 PRND CACTGCACTCTAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TCGGTGA another GAM337096 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337096 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337096 is therefore inhibition of PRND, a GAM337096 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337096 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337097 CTSB TGGAAAGCATGTACA CTSB (Accession NM_147783.1) is a GAM337097 target gene. CTSB A A
TTTGGAG BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CTSB,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337097 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337097 is therefore inhibition of CTSB. Accordingly, utilities of GAM337097 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM337097 IGF1 TGGAAAGCATGTACA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TTTGGAG NM_000618.2) is another GAM337097 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337097 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337097 is therefore inhibition of IGF1, a GAM337097 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337097 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337098 BACE TCTTTTTGTTGTAGC Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

TGTATGG is a GAM337098 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337098 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337098 is therefore inhibition of BACE, a GAM337098 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337098 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337098 BCHE TCTTTTTGTTGTAGC BCHE (Accession NM_000055.1) is another GAM337098 target gene. A A

TGTATGG BCHE BINDING SITE1 and BCHE BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BCHE, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE1 and BCHE BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337098 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337098 is therefore inhibition of BCHE. Accordingly, utilities of GAM337098 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM337098 IL1A TCTTTTTGTTGTAGC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TGTATGG GAM337098 target gene. IL1A BINDING SITE1 and IL1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IL1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE1 and IL1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337098 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337098 is therefore inhibition of IL1A, a GAM337098 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337098 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337099 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337099 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337099 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337099 is therefore inhibition of APP. Accordingly, utilities of GAM337099 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337100 B2M TAAAGTGTGTATGGG Beta- 2- microglobulin (B2M, Accession NM_004048.1) is a A A
CAGGTGT GAM337100 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337100 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337100 is therefore inhibition of B2M, a GAM337100 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337100 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM337101 APBB2 TCTTGGGATAGTGTC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TCATGGC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337101 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337101 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337101 is therefore inhibition of APBB2, a GAM337101 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337101 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337101 MAPT TCTTGGGATAGTGTC Microtubule- associated Protein Tau (MAPT, Accession A A

TCATGGC NM_173727.1) is another GAM337101 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337101 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337101 is therefore inhibition of MAPT, a GAM337101 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337101 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337105 CTSK TGCAAGTTGTCTTCT CTSK (Accession NM_000396.2) is a GAM337105 target gene. CTSK A A

AGGGTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337105 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337105 is therefore inhibition of CTSK. Accordingly, utilities of GAM337105 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM337105 DLST TGCAAGTTGTCTTCT Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

AGGGTGT oxo- glutarat (DLST, Accession NM_001933.2) is another GAM337105 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337105 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337105 is therefore inhibition of DLST, a GAM337105 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337105 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337106 DLST CACAGCATTGGTCAT Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GAGGTCA oxo- glutarat (DLST, Accession NM_001933.2) is a GAM337106 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337106 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337106 is therefore inhibition of DLST, a GAM337106 target gene which catalyzes the oxidative decarboxylation

of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337106 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337108 DLST CACAGCATTGGTCAT Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GAGGTCA oxo- glutarat (DLST, Accession NM_001933.2) is a GAM337108 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337108 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337108 is therefore inhibition of DLST, a GAM337108 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337108 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337109 IGF1 ATGGCTCATGTTTGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

AGTCTCA NM_000618.2) is a GAM337109 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337109 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337109 is therefore inhibition of IGF1, a GAM337109 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337109 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337110 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337110 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337110 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337110 is therefore inhibition of APP. Accordingly, utilities of GAM337110 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337111 APPBP2 ACTGTACTTCAGCCT GGGTAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337111 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337111 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337111 is therefore inhibition of APPBP2, a GAM337111 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337111 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337111 FHL2 ACTGTACTTCAGCCT GGGTAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337111 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337111 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337111 is therefore inhibition of FHL2, a GAM337111 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337111 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337111 IGF1 ACTGTACTTCAGCCT GGGTAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337111 target gene. IGF1 BINDING SITE is A A

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337111 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337111 is therefore inhibition of IGF1, a GAM337111 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337111 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337111 PRND ACTGTACTTCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTAAC another GAM337111 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337111 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337111 is therefore inhibition of PRND, a GAM337111 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337111 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337112 APPBP2 ACTGTACTTCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGTAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337112 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337112 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337112 is therefore inhibition of APPBP2, a GAM337112 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337112 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337112 FHL2 ACTGTACTTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTAAC another GAM337112 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337112 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337112 is therefore inhibition of FHL2, a GAM337112 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337112 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337112 IGF1 ACTGTACTTCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTAAC NM_000618.2) is another GAM337112 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337112 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337112 is therefore inhibition of IGF1, a GAM337112 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337112 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337112 PRND ACTGTACTTCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGTAAC another GAM337112 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337112 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337112 is therefore inhibition of PRND, a GAM337112 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337112 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337113 APPBP2 ACTGTACTTCAGCCT GGGTAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337113 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337113 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337113 is therefore inhibition of APPBP2, a GAM337113 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337113 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337113 FHL2 ACTGTACTTCAGCCT GGGTAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337113 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337113 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337113 is therefore inhibition of FHL2, a GAM337113 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337113 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM337113 IGF1 ACTGTACTTCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGTAAC NM_000618.2) is another GAM337113 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337113 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337113 is therefore inhibition of IGF1, a GAM337113 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337113 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337113 PRND ACTGTACTTCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGTAAC another GAM337113 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337113 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337113 is therefore inhibition of PRND, a GAM337113 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337113 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337115 GLUL AGCAGCTCAAGTCTT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
CTCCAGA NM_002065.3) is a GAM337115 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337115 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337115 is therefore inhibition of GLUL, a GAM337115 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337115 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337115 HD AGCAGCTCAAGTCTT HD (Accession NM_002111.3) is another GAM337115 target gene. HD A A CTCCAGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337115 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337115 is therefore inhibition of HD. Accordingly, utilities of GAM337115 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337118 APPBP2 GAGTATTACCTATAT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A CACCGTG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337118 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337118 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337118 is therefore inhibition of APPBP2, a GAM337118 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337118 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337119 ACE AGTGATTTTCCTGCC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A TCAGCCT (ACE, Accession NM_152831.1) is a GAM337119 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337119 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337119 is therefore inhibition of ACE, a GAM337119 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337119 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337119 HTR2A AGTGATTTTCCTGCC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
TCAGCCT NM_000621.1) is another GAM337119 target gene. HTR2A BINDING SITE1 and HTR2A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HTR2A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE1 and HTR2A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337119 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337119 is therefore inhibition of HTR2A, a GAM337119 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337119 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337119 IAPP AGTGATTTTCCTGCC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
TCAGCCT another GAM337119 target gene. IAPP BINDING SITE1 and IAPP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IAPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE1 and IAPP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337119 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337119 is therefore inhibition of IAPP, a GAM337119 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337119 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337119 MTNR1A AGTGATTTTCCTGCC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A
TCAGCCT another GAM337119 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337119 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337119 is therefore inhibition of MTNR1A, a GAM337119 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337119 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337119 RAGE AGTGATTTTCCTGCC Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another A A
TCAGCCT GAM337119 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337119 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337119 is therefore inhibition of RAGE, a GAM337119 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM337119 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM337126 MAPT GCTGAGAAAACCAGG Microtubule- associated Protein Tau (MAPT, Accession A A
TTAATGG NM_016835.1) is a GAM337126 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337126 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337126 is therefore inhibition of MAPT, a

GAM337126 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337126 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337127 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337127 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337127 is therefore inhibition of APPBP2, a GAM337127 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337127 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337127 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337127 is therefore inhibition of BACE2, a GAM337127 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337127 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337127 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337127 is therefore inhibition of FHL2, a GAM337127 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337127 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337127 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337127 is therefore inhibition of HD. Accordingly, utilities of GAM337127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337127 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM337127 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337127 is therefore inhibition of IGF1, a GAM337127 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337127 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337127 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337127 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337127 is therefore inhibition of PRND, a GAM337127 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337127 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337128 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337128 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337128 is therefore inhibition of APPBP2, a GAM337128 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337128 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337128 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337128 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337128 is therefore inhibition of BACE2, a GAM337128 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337128 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337128 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337128 is therefore inhibition of FHL2, a GAM337128 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337128 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337128 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337128 is therefore inhibition of HD. Accordingly, utilities of GAM337128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337128 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337128 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337128 is therefore inhibition of IGF1, a GAM337128 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337128 PRND CATTGCACTCCAGCC TGGGCAA A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337128 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337128 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337128 is therefore inhibition of PRND, a GAM337128 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337128 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337129 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337129 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337129 is therefore inhibition of APPBP2, a GAM337129 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337129 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337129 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337129 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337129 is therefore inhibition of BACE2, a GAM337129 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337129 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337129 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337129 is therefore inhibition of FHL2, a GAM337129 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337129 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337129 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337129 is therefore inhibition of IGF1, a GAM337129 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337129 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337129 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337129 is therefore inhibition of MME, a GAM337129 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337129 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337129 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337129 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337129 is therefore inhibition of PRND, a GAM337129 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337129 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337130 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCGAT Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337130 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337130 is therefore inhibition of APPBP2, a GAM337130 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337130 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCGAT another GAM337130 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337130 is therefore inhibition of FHL2, a GAM337130 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337130 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCGAT NM_000618.2) is another GAM337130 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337130 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337130 is therefore inhibition of IGF1, a GAM337130 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337130 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCGAT another GAM337130 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337130 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337130 is therefore inhibition of PRND, a GAM337130 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337130 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337131 LRP1 TTCTCCCTGCCCACA Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
CATCCAG macroglobulin recep (LRP1, Accession NM_002332.1) is a GAM337131 target gene. LRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337131 is therefore inhibition of LRP1, a GAM337131 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337131 OLR1 TTCTCCCTGCCCACA Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A
CATCCAG (OLR1, Accession NM_002543.1) is another GAM337131 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337131 is therefore inhibition of OLR1, a GAM337131 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337131 TFCP2 TTCTCCCTGCCCACA Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM337131 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337131 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A A
CATCCAG

Another function of GAM337131 is therefore inhibition of TFCP2, a GAM337131 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337131 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337133 AVP TGAGGACAGGAGGTT AVP (Accession NM_000490.2) is a GAM337133 target gene. AVP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A A
GTGAGTT

A function of GAM337133 is therefore inhibition of AVP. Accordingly, utilities of GAM337133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM337133 IL1B TGAGGACAGGAGGTT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A
A
GTGAGTT GAM337133 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337133 is therefore inhibition of IL1B, a GAM337133 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM337133 MAPK10 TGAGGACAGGAGGTT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A
A
GTGAGTT NM_138980.1) is another GAM337133 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337133 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337133 is therefore inhibition of MAPK10, a GAM337133 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337133 MME TGAGGACAGGAGGTT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GTGAGTT enkephalinase, (MME, Accession NM_007287.1) is another GAM337133 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337133 RNA are set forth in Tables 6 and 7, hereby incorporated

herein.

Another function of GAM337133 is therefore inhibition of MME, a GAM337133 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337133 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337135 FHL2 CACTGCACTCCAACC TGGACAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM337135 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337135 is therefore inhibition of FHL2, a GAM337135 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337135 IGF1 CACTGCACTCCAACC TGGACAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337135 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337135 is therefore inhibition of IGF1, a GAM337135 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337135 PRND CACTGCACTCCAACC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A

TGGACAA another GAM337135 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337135 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337135 is therefore inhibition of PRND, a GAM337135 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337135 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337136 PSEN1 GAGGGAAGCATGGGA PSEN1 (Accession NM_000021.2) is a GAM337136 target gene. PSEN1 A A

CCATGAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337136 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337136 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337136 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337138 ABCD1 TGAGGCAGGAGTTGG ABCD1 (Accession NM_000033.2) is a GAM337138 target gene. ABCD1 A A

CAAGAGG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337138 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337138 SLC17A7 TGAGGCAGGAGTTGG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

CAAGAGG NM_020309.1) is another GAM337138 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM337138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337138 is therefore inhibition of SLC17A7, a GAM337138 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337138 TGFB1 TGAGGCAGGAGTTGG TGFB1 (Accession NM_000660.1) is another GAM337138 target gene. A A

CAAGAGG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337138 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337138 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337138 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337140 AVP TGAGGACAGGAGGTT AVP (Accession NM_000490.2) is a GAM337140 target gene. AVP A A

GTGAGTT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337140 is therefore inhibition of AVP. Accordingly, utilities of GAM337140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM337140 IL1B TGAGGACAGGAGGTT Interleukin 1, Beta (IL1B, Accession NM_000576.2) is another A A

GTGAGTT GAM337140 target gene. IL1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337140 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337140 is therefore inhibition of

IL1B, a GAM337140 target gene which stimulates thymocyte proliferation. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1B.The function of IL1B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM604.

GAM337140 MAPK10 TGAGGACAGGAGGTT GTGAGTT Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138980.1) is another GAM337140 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337140 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337140 is therefore inhibition of MAPK10, a GAM337140 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337140 MME TGAGGACAGGAGGTT GTGAGTT Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007287.1) is another GAM337140 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337140 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337140 is therefore inhibition of MME, a GAM337140 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337140 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337143 FHL2 CACTGCACTCCAACC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGACAA a GAM337143 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337143 is therefore inhibition of FHL2, a GAM337143 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337143 IGF1 CACTGCACTCCAACC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGACAA NM_000618.2) is another GAM337143 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337143 is therefore inhibition of IGF1, a GAM337143 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337143 PRND CACTGCACTCCAACC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGACAA another GAM337143 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337143 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337143 is therefore inhibition of PRND, a GAM337143 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM337143 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337144 CRAT CGGTGCTGTTCAACA GGTCCTG A A Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is a GAM337144 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337144 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337144 is therefore inhibition of CRAT, a GAM337144 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337144 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337145 ACE AGGCACTGTGCAGGA TGATGGG A A Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM337145 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337145 is therefore inhibition of ACE, a GAM337145 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337145 APCS AGGCACTGTGCAGGA TGATGGG A A Amyloid P Component, Serum (APCS, Accession NM_001639.2) is another GAM337145 target gene. APCS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of APCS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337145 is therefore inhibition of APCS, a GAM337145 target gene which can interact with dna and histones and may scavenge nuclear material released from damaged circulating cells. may also function as a calcium- dependent lectin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APCS.The function of APCS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM772.

GAM337145 NOTCH1 AGGCACTGTGCAGGA Notch (Drosophila) Homolog 1 (translocation- associated) A A

TGATGGG (NOTCH1, Accession NM_017617.2) is another GAM337145 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337145 is therefore inhibition of NOTCH1, a GAM337145 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM337145 OLR1 AGGCACTGTGCAGGA Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A

TGATGGG (OLR1, Accession NM_002543.1) is another GAM337145 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337145 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337145 is therefore inhibition of OLR1, a GAM337145 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337145 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337146 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337146 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337146 is therefore inhibition of APPBP2, a GAM337146 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337146 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337146 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337146 is therefore inhibition of BACE2, a GAM337146 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337146 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337146 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM337146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337146 is therefore inhibition of FHL2, a GAM337146 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337146 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337146 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337146 is therefore inhibition of IGF1, a GAM337146 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337146 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337146 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337146 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337146 is therefore inhibition of MME, a GAM337146 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337146 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337146 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337146 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337146 is therefore inhibition of PRND, a GAM337146 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337146 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337147 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337147 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337147 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337147 is therefore inhibition of APPBP2, a GAM337147 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337147 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337147 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide A A

sequence of GAM337147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337147 is therefore inhibition of BACE2, a GAM337147 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337147 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337147 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337147 is therefore inhibition of FHL2, a GAM337147 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337147 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337147 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337147 is therefore inhibition of IGF1, a GAM337147 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337147 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337147 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337147 is therefore inhibition of MME, a GAM337147 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337147 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337147 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337147 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337147 is therefore inhibition of PRND, a GAM337147 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337147 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337148 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337148 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337148 RNA are set forth in Tables 6 and 7, hereby incorporated

herein.

A function of GAM337148 is therefore inhibition of APPBP2, a GAM337148 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337148 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337148 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337148 is therefore inhibition of BACE2, a GAM337148 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337148 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337148 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337148 is therefore inhibition of FHL2, a GAM337148 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM337148 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM337148 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337148 is therefore inhibition of IGF1, a GAM337148 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337148 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337148 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337148 is therefore inhibition of MME, a GAM337148 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337148 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM337148 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337148 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337148 is therefore inhibition of PRND, a GAM337148 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337148 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337149 OGDH AGGGCAGTGGATCTC Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A
TGCAAAG NM_002541.1) is a GAM337149 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337149 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337149 is therefore inhibition of OGDH, a GAM337149 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337149 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM337150 FHL2 CACTGCACTCCAACC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGACAA a GAM337150 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337150 is therefore inhibition of FHL2, a GAM337150 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337150 IGF1 CACTGCACTCCAACC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGACAA NM_000618.2) is another GAM337150 target gene. IGF1 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337150 is therefore inhibition of IGF1, a GAM337150 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337150 PRND CACTGCACTCCAACC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGACAA another GAM337150 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337150 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337150 is therefore inhibition of PRND, a GAM337150 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337150 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337151 FHL2 ACTGCACTCTAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

AGGTGAT a GAM337151 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337151 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337151 is therefore inhibition of FHL2, a GAM337151 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337151 IGF1 ACTGCACTCTAGCCT AGGTGAT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337151 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337151 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337151 is therefore inhibition of IGF1, a GAM337151 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337151 PRND ACTGCACTCTAGCCT AGGTGAT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337151 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337151 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337151 is therefore inhibition of PRND, a GAM337151 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337151 TFCP2 ACTGCACTCTAGCCT AGGTGAT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM337151 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337151 RNA are set A A

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337151 is therefore inhibition of TFCP2, a GAM337151 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337151 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337152 ADAM17 AGATGATGTTGGAGT A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

CTGTGCT factor, (ADAM17, Accession NM_021832.1) is a GAM337152 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337152 is therefore inhibition of ADAM17, a GAM337152 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337152 IGF1 AGATGATGTTGGAGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CTGTGCT NM_000618.2) is another GAM337152 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337152 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337152 is therefore inhibition of IGF1, a GAM337152 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337152 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337153 APBA1 ACTGCACTCCATCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A GGGGAGC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337153 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337153 is therefore inhibition of APBA1, a GAM337153 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337153 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A GGGGAGC another GAM337153 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337153 is therefore inhibition of FHL2, a GAM337153 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337153 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A GGGGAGC NM_000618.2) is another GAM337153 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337153 is therefore inhibition of IGF1, a GAM337153 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337153 PLAU ACTGCACTCCATCCT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GGGGAGC is another GAM337153 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337153 is therefore inhibition of PLAU, a GAM337153 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337153 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGGAGC another GAM337153 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337153 is therefore inhibition of PRND, a GAM337153 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337153 TNF ACTGCACTCCATCCT Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

GGGGAGC Accession NM_000594.2) is another GAM337153 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337153 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337153 is therefore inhibition of TNF, a GAM337153 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337153 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337154 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337154 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337154 is therefore inhibition of APPBP2, a GAM337154 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337154 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337154 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337154 is therefore inhibition of

BACE2, a GAM337154 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337154 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337154 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337154 is therefore inhibition of FHL2, a GAM337154 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337154 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337154 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337154 is therefore inhibition of IGF1, a GAM337154 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337154 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337154 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337154 is therefore inhibition of MME, a GAM337154 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337154 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337154 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337154 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337154 is therefore inhibition of PRND, a GAM337154 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337154 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337155 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337155 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337155 is therefore inhibition of APPBP2, a GAM337155 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337155 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337155 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337155 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337155 is therefore inhibition of BACE2, a GAM337155 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337155 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337155 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337155 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337155 is therefore inhibition of FHL2, a GAM337155 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337155 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337155 target gene. IGF1 BINDING SITE is A A

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337155 is therefore inhibition of IGF1, a GAM337155 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337155 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337155 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337155 is therefore inhibition of MME, a GAM337155 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337155 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337155 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337155 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337155 is therefore inhibition of PRND, a GAM337155 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM337155 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337156 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337156 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337156 is therefore inhibition of APPBP2, a GAM337156 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337156 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337156 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337156 is therefore inhibition of BACE2, a GAM337156 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337156 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337156 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337156 is therefore inhibition of FHL2, a GAM337156 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337156 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337156 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337156 is therefore inhibition of IGF1, a GAM337156 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337156 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337156 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337156 is therefore inhibition of MME, a GAM337156 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM337156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337156 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337156 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337156 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337156 is therefore inhibition of PRND, a GAM337156 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337156 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337157 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGTGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337157 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337157 is therefore inhibition of APPBP2, a GAM337157 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337157 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGTGA another GAM337157 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337157 is therefore inhibition of FHL2, a GAM337157 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337157 IGF1 CATTGCACTCCAGCC A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
TGGGTGA NM_000618.2) is another GAM337157 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337157 is therefore inhibition of IGF1, a GAM337157 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337157 PRND CATTGCACTCCAGCC A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
TGGGTGA another GAM337157 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337157 is therefore inhibition of PRND, a GAM337157 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with

various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337157 target A A TNFRSF5 CATTGCACTCCAGCC TGGGTGA

TNFRSF5 (Accession NM_152854.1) is another GAM337157 target gene. TNFRSF5 BINDING SITE1 and TNFRSF5 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE1 and TNFRSF5 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337157 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337157 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM337157 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM337158 DLST AATGTGCATGGATCG A A CTCAGAA

Dihydrolipoamide S- succinyltransferase (E2 component of 2- oxo- glutarat (DLST, Accession NM_001933.2) is a GAM337158 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337158 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337158 is therefore inhibition of DLST, a GAM337158 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337158 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337159 APP TGTGCACAACATGCA A A GGTTTGT

APP (Accession NM_000484.1) is a GAM337159 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337159 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337159 is therefore inhibition of APP. Accordingly, utilities of GAM337159 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337160 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337160 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337160 is therefore inhibition of APPBP2, a GAM337160 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337160 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337160 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337160 is therefore inhibition of BACE2, a GAM337160 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337160 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337160 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337160 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337160 is therefore inhibition of FHL2, a GAM337160 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337160 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337160 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337160 is therefore inhibition of IGF1, a GAM337160 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337160 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337160 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337160 is therefore inhibition of MME, a GAM337160 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337160 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337160 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337160 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337160 is therefore inhibition of PRND, a GAM337160 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337160 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337161 AVP AGGGGGTTTAGCTCC AVP (Accession NM_000490.2) is a GAM337161 target gene. AVP A A

ACAGGGT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337161 is therefore inhibition of AVP. Accordingly, utilities of GAM337161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM337161 BACE2 AGGGGGTTTAGCTCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

ACAGGGT NM_138992.1) is another GAM337161 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337161 is therefore inhibition of BACE2, a GAM337161 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337161 HD AGGGGGTTTAGCTCC HD (Accession NM_002111.3) is another GAM337161 target gene. HD A A

ACAGGGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337161 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337161 is therefore inhibition of HD. Accordingly, utilities of GAM337161 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337162 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337162 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337162 is therefore inhibition of APPBP2, a GAM337162 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337162 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337162 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337162 is therefore inhibition of BACE2, a GAM337162 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM337162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337162 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337162 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337162 is therefore inhibition of FHL2, a GAM337162 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337162 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337162 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337162 is therefore inhibition of IGF1, a GAM337162 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337162 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337162 target gene. MME BINDING SITE is a target binding site found in the

5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337162 is therefore inhibition of MME, a GAM337162 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337162 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM337162 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337162 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337162 is therefore inhibition of PRND, a GAM337162 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337162 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337166 APBA1 ACTGCACTCCATCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A GGGGAGC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337166 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337166 is therefore inhibition of APBA1, a GAM337166 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337166 FHL2 ACTGCACTCCATCCT A A GGGGAGC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337166 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337166 is therefore inhibition of FHL2, a GAM337166 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337166 IGF1 ACTGCACTCCATCCT A A GGGGAGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337166 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337166 is therefore inhibition of IGF1, a GAM337166 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337166 PLAU ACTGCACTCCATCCT A A GGGGAGC Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) is another GAM337166 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337166 is therefore inhibition of PLAU, a GAM337166 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337166 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGGAGC another GAM337166 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337166 is therefore inhibition of PRND, a GAM337166 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337166 TNF ACTGCACTCCATCCT Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A GGGGAGC Accession NM_000594.2) is another GAM337166 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337166 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337166 is therefore inhibition of TNF, a GAM337166 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337166 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337167 CNTF TTTGCAGCTTCCAAA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A

TTTCTGA GAM337167 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337167 is therefore inhibition of CNTF, a GAM337167 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337167 SLC17A7 TTTGCAGCTTCCAAA SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

TTTCTGA NM_020309.1) is another GAM337167 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337167 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337167 is therefore inhibition of SLC17A7, a GAM337167 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337167 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337168 APPBP2 TGAGATGAACCCGGT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

ACCTCAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337168 target gene. APPBP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337168 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337168 is therefore inhibition of APPBP2,

a GAM337168 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337168 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337169 DLST GAGAAGTAGGAATAT Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

CAGGAGT oxo- glutarat (DLST, Accession NM_001933.2) is a GAM337169 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337169 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337169 is therefore inhibition of DLST, a GAM337169 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337169 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337170 MME CAGAGCAGTGGAGAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TAGGTCT enkephalinase, (MME, Accession NM_007288.1) is a GAM337170 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337170 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337170 is therefore inhibition of MME, a GAM337170 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337170 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337171 APBA1 ACTGCACTCCATCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGGGAGC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337171 target gene.

APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337171 is therefore inhibition of APBA1, a GAM337171 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337171 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGGAGC another GAM337171 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337171 is therefore inhibition of FHL2, a GAM337171 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337171 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGGAGC NM_000618.2) is another GAM337171 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337171 is therefore inhibition of IGF1, a GAM337171 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer.

Accordingly, utilities of GAM337171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337171 PLAU ACTGCACTCCATCCT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GGGGAGC is another GAM337171 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337171 is therefore inhibition of PLAU, a GAM337171 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337171 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGGAGC another GAM337171 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337171 is therefore inhibition of PRND, a GAM337171 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337171 TNF ACTGCACTCCATCCT Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

GGGGAGC Accession NM_000594.2) is another GAM337171 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337171 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337171 is therefore inhibition of TNF, a GAM337171 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337171 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337172 APPBP2 ACAAAAAATTAGCCA GACTGGT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337172 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337172 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337172 is therefore inhibition of APPBP2, a GAM337172 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337172 IGF1 ACAAAAAATTAGCCA GACTGGT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337172 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337172 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337172 is therefore inhibition of IGF1, a GAM337172 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337172 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337173 PRND TTGAGAATGCTGTAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A

TTGGAGG GAM337173 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337173 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337173 is therefore inhibition of PRND, a GAM337173 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337173 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337174 CNTF GCAGGTGTGCAAATC Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A

ACAACTT GAM337174 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337174 is therefore inhibition of CNTF, a GAM337174 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337174 IGF1 GCAGGTGTGCAAATC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACAACTT NM_000618.2) is another GAM337174 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337174 is therefore inhibition of IGF1, a GAM337174 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337174 PLAU GCAGGTGTGCAAATC Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

ACAACTT is another GAM337174 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337174 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337174 is therefore inhibition of PLAU, a GAM337174 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337174 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337177 ACE GTGAAGAAGTTGCTT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

CATCCTT (ACE, Accession NM_152831.1) is a GAM337177 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337177 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337177 is therefore inhibition of ACE, a GAM337177 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337177 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337177 APPBP2 GTGAAGAAGTTGCTT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CATCCTT Protein 2 (APPBP2, Accession NM_006380.2) is another GAM337177

target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337177 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337177 is therefore inhibition of APPBP2, a GAM337177 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337177 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337179 IGF1 CTGTGGGTGAGAGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGAGA NM_000618.2) is a GAM337179 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337179 is therefore inhibition of IGF1, a GAM337179 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337179 OGDH CTGTGGGTGAGAGAG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A
TGGGAGA NM_002541.1) is another GAM337179 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337179 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337179 is therefore inhibition of OGDH, a GAM337179 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337179 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM337179 OLR1 CTGTGGGTGAGAGAG TGGGAGA Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 (OLR1, Accession NM_002543.1) is another GAM337179 target gene. OLR1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337179 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337179 is therefore inhibition of OLR1, a GAM337179 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337179 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337180 TNFRSF6 AGTGCTTTGATTATG AGAAAGT TNFRSF6 (Accession NM_152875.1) is a GAM337180 target gene. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337180 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337180 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM337180 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM337181 TNFRSF6 AGTGCTTTGATTATG AGAAAGT TNFRSF6 (Accession NM_152875.1) is a GAM337181 target gene. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337181 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337181 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM337181 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with TNFRSF6.

GAM337183 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337183 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337183 is therefore inhibition of APPBP2, a GAM337183 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337183 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337183 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337183 is therefore inhibition of BACE2, a GAM337183 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337183 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337183 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337183 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337183 is therefore inhibition of FHL2, a GAM337183 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337183 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337183 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337183 is therefore inhibition of HD. Accordingly, utilities of GAM337183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337183 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337183 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337183 is therefore inhibition of IGF1, a GAM337183 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337183 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337183 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337183 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337183 is therefore inhibition of PRND, a GAM337183 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337183 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337184 APPBP2 GACTGGCTAATTTAT AAAGGAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337184 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337184 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337184 is therefore inhibition of APPBP2, a GAM337184 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337184 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337185 APPBP2 ATTGTTCTCCAGCCT GGGCGAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337185 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337185 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337185 is therefore inhibition of APPBP2, a GAM337185 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337185 FHL2 ATTGTTCTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCGAC another GAM337185 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337185 is therefore inhibition of FHL2, a GAM337185 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337185 IGF1 ATTGTTCTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCGAC NM_000618.2) is another GAM337185 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337185 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337185 is therefore inhibition of IGF1, a GAM337185 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337185 PRND ATTGTTCTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCGAC another GAM337185 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337185 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337185 is therefore inhibition of PRND, a GAM337185 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337185 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337186 APPBP2 ATTGTTCTCCAGCCT GGGCGAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337186 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337186 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337186 is therefore inhibition of APPBP2, a GAM337186 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337186 FHL2 ATTGTTCTCCAGCCT GGGCGAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337186 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337186 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337186 is therefore inhibition of FHL2, a GAM337186 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337186 IGF1 ATTGTTCTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCGAC NM_000618.2) is another GAM337186 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337186 is therefore inhibition of IGF1, a GAM337186 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337186 PRND ATTGTTCTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCGAC another GAM337186 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337186 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337186 is therefore inhibition of PRND, a GAM337186 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337186 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337187 IGF1 GGACTGAGACATGAT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TAACTTG NM_000618.2) is a GAM337187 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337187 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337187 is therefore inhibition of IGF1, a GAM337187 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity

and therefore is associated with Alzheimer. Accordingly, utilities of GAM337187 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337188 FHL2 TGCACCAATGCACTC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CAGCCTG a GAM337188 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337188 is therefore inhibition of FHL2, a GAM337188 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337188 IGF1 TGCACCAATGCACTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CAGCCTG NM_000618.2) is another GAM337188 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337188 is therefore inhibition of IGF1, a GAM337188 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337188 MAPT TGCACCAATGCACTC Microtubule- associated Protein Tau (MAPT, Accession A A

CAGCCTG NM_173727.1) is another GAM337188 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337188 is therefore inhibition of MAPT, a GAM337188 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337188 PRND TGCACCAATGCACTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A CAGCCTG another GAM337188 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337188 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337188 is therefore inhibition of PRND, a GAM337188 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337188 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337189 FHL2 TGCACCAATGCACTC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A CAGCCTG a GAM337189 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337189 is therefore inhibition of FHL2, a GAM337189 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337189 IGF1 TGCACCAATGCACTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

CAGCCTG NM_000618.2) is another GAM337189 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337189 is therefore inhibition of IGF1, a GAM337189 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337189 MAPT TGCACCAATGCACTC Microtubule- associated Protein Tau (MAPT, Accession A A

CAGCCTG NM_173727.1) is another GAM337189 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337189 is therefore inhibition of MAPT, a GAM337189 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337189 PRND TGCACCAATGCACTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

CAGCCTG another GAM337189 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2,

and secondary structure complementarity to the nucleotide sequence of GAM337189 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337189 is therefore inhibition of PRND, a GAM337189 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337189 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337190 MAPK10 ACTGGCACAGACATC A A TGTCAAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession NM_138981.1) is a GAM337190 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337190 is therefore inhibition of MAPK10, a GAM337190 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337190 MTNR1A ACTGGCACAGACATC A A TGTCAAG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM337190 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337190 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337190 is therefore inhibition of MTNR1A, a GAM337190 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337190 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337191 SLC6A4 TCACAGTTGAGAGAA GGTTCTG Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is a GAM337191 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337191 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337191 is therefore inhibition of SLC6A4, a GAM337191 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337191 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM337192 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337192 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337192 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337192 is therefore inhibition of APP. Accordingly, utilities of GAM337192 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337193 S100B TATTTGTTTTTAATG CTGGGTG S100 Calcium- binding Protein, Beta (neural) (S100B, Accession NM_006272.1) is a GAM337193 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337193 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337193 is therefore inhibition of S100B, a GAM337193 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337193 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM337194 ABCD1 CTGGCTCCCAGGAGG ABCD1 (Accession NM_000033.2) is a GAM337194 target gene.
ABCD1 A A

CCTCTCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337194 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337194 CAV2 CTGGCTCCCAGGAGG Caveolin 2 (CAV2, Accession NM_001233.2) is another
GAM337194 A A

CCTCTCT target gene. CAV2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337194 is therefore inhibition of CAV2, a GAM337194 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337194 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337194 HD CTGGCTCCCAGGAGG HD (Accession NM_002111.3) is another GAM337194 target gene.
HD A A

CCTCTCT BINDING SITE1 and HD BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 and HD BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337194 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337194 is therefore inhibition of HD. Accordingly, utilities of GAM337194 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337195 ABCD1 CTGGCTCCCAGGAGG ABCD1 (Accession NM_000033.2) is a GAM337195 target gene. ABCD1 A A

CCTCTCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337195 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337195 CAV2 CTGGCTCCCAGGAGG Caveolin 2 (CAV2, Accession NM_001233.2) is another GAM337195 A A

CCTCTCT target gene. CAV2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337195 is therefore inhibition of CAV2, a GAM337195 target gene which may function as an accessory protein in conjunction with caveolin- 1and act as a scaffolding protein within caveolar membranes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV2.The function of CAV2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337195 HD CTGGCTCCCAGGAGG HD (Accession NM_002111.3) is another GAM337195 target gene. HD A A

CCTCTCT BINDING SITE1 and HD BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE1 and HD BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337195 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337195 is therefore inhibition of HD. Accordingly, utilities of GAM337195 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337196 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337196 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337196 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337196 is therefore inhibition of APP. Accordingly, utilities of GAM337196 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337197 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337197 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337197 is therefore inhibition of APPBP2, a GAM337197 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337197 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337197 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337197 is therefore inhibition of BACE2, a GAM337197 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM189.

GAM337197 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337197 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337197 is therefore inhibition of FHL2, a GAM337197 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337197 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337197 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337197 is therefore inhibition of HD. Accordingly, utilities of GAM337197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337197 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337197 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337197 is therefore inhibition of IGF1, a GAM337197 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337197 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337197 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337197 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337197 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337197 is therefore inhibition of PRND, a GAM337197 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337197 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337199 BACE TGGTTAGTTTTATGG Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

GCCTGGA is a GAM337199 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337199 is therefore inhibition of BACE, a GAM337199 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337199 CLU TGGTTAGTTTTATGG Clusterin (complement lysis inhibitor, SP- 40,40, sulfated A A

GCCTGGA glycoprotein (CLU, Accession NM_001831.1) is another GAM337199 target gene. CLU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CLU BINDING SITE, and secondary structure complementarity to the nucleotide sequence

of GAM337199 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337199 is therefore inhibition of CLU, a GAM337199 target gene which has a role in the terminal complement reaction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CLU.The function of CLU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM337199 LRP1 TGGTTAGTTTTATGG GCCTGGA Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337199 target gene. LRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337199 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337199 is therefore inhibition of LRP1, a GAM337199 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337199 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337200 CRAT TGCGCCCCTGTACTC TGGGCAA Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is a GAM337200 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337200 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337200 is therefore inhibition of CRAT, a GAM337200 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337200 PRND TGCGCCCCTGTACTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM337200 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337200 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337200 is therefore inhibition of PRND, a GAM337200 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337200 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337202 IL1A TTGAGGTCATCTAAT Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is a A A
GGTGTTG GAM337202 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337202 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337202 is therefore inhibition of IL1A, a GAM337202 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337202 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337203 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337203 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337203 is therefore inhibition of APPBP2,

a GAM337203 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337203 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337203 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337203 is therefore inhibition of BACE2, a GAM337203 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337203 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337203 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337203 is therefore inhibition of FHL2, a GAM337203 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337203 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337203 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337203 is therefore inhibition of IGF1, a GAM337203 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337203 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337203 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337203 is therefore inhibition of MME, a GAM337203 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337203 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337203 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337203 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337203 is therefore inhibition of PRND, a GAM337203 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337203 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337204 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337204 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337204 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337204 is therefore inhibition of APP. Accordingly, utilities of GAM337204 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337206 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337206 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337206 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337206 is therefore inhibition of APP. Accordingly, utilities of GAM337206 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337207 IAPP TTTTGCAAATTACTA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a A A

AATTTCT GAM337207 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337207 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337207 is therefore inhibition of IAPP, a GAM337207 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337207 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM347.

GAM337208 IAPP TTTTGCAAATTACTA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a A A

AATTTCT GAM337208 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337208 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337208 is therefore inhibition of IAPP, a GAM337208 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337208 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337209 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337209 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337209 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337209 is therefore inhibition of APP. Accordingly, utilities of GAM337209 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337210 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337210 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337210 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337210 is therefore inhibition of APP. Accordingly, utilities of GAM337210 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337211 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337211 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337211 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337211 is therefore inhibition of APP. Accordingly, utilities of GAM337211 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337212 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337212 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337212 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337212 is therefore inhibition of APP. Accordingly, utilities of GAM337212 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337213 APPBP2 ACTGTACTTCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337213 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337213 is therefore inhibition of APPBP2, a GAM337213 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337213 FHL2 ACTGTACTTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337213 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337213 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337213 is therefore inhibition of FHL2, a GAM337213 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337213 IGF1 ACTGTACTTCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337213 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337213 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337213 is therefore inhibition of IGF1, a GAM337213 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337213 PRND ACTGTACTTCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337213 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337213 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337213 is therefore inhibition of PRND, a GAM337213 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337213 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337214 APPBP2 ACTGTACTTCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337214 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337214 is therefore inhibition of APPBP2, a GAM337214 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337214 FHL2 ACTGTACTTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337214 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337214 is therefore inhibition of FHL2, a GAM337214 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337214 IGF1 ACTGTACTTCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337214 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337214 is therefore inhibition of IGF1, a GAM337214 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337214 PRND ACTGTACTTCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337214 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337214 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337214 is therefore inhibition of PRND, a GAM337214 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337214 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337215 APPBP2 ACTGTACTTCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337215 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337215 is therefore inhibition of APPBP2, a GAM337215 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337215 FHL2 ACTGTACTTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337215 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337215 is therefore inhibition of FHL2, a GAM337215 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337215 IGF1 ACTGTACTTCAGCCT AA GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337215 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337215 is therefore inhibition of IGF1, a GAM337215 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337215 PRND ACTGTACTTCAGCCT AA GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337215 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337215 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337215 is therefore inhibition of PRND, a GAM337215 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337215 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337216 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337216 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337216 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337216 is therefore inhibition of APP. Accordingly, utilities of GAM337216 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337217 DLST AGGCAGTAAGGGAGA Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

GTTTTGC oxo- glutarat (DLST, Accession NM_001933.2) is a GAM337217 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337217 is therefore inhibition of DLST, a GAM337217 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337217 HD AGGCAGTAAGGGAGA HD (Accession NM_002111.3) is another GAM337217 target gene. HD A A

GTTTTGC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337217 is therefore inhibition of HD. Accordingly, utilities of GAM337217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337217 TRPM2 AGGCAGTAAGGGAGA TRPM2 (Accession NM_003307.1) is another GAM337217 target gene. A A

GTTTTGC TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337217 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337217 is therefore inhibition of TRPM2, a GAM337217 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM337217 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337218 APBB2 TGGCTCTGTCTATTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GGATGTG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337218 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337218 is therefore inhibition of APBB2, a GAM337218 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337218 CASP3 TGGCTCTGTCTATTG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

GGATGTG Accession NM_032991.1) is another GAM337218 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337218 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337218 is therefore inhibition of CASP3, a GAM337218 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic

cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337218 MPO TGGCTCTGTCTATTG GGATGTG Myeloperoxidase (MPO, Accession NM_000250.1) is another GAM337218 target gene. MPO BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337218 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337218 is therefore inhibition of MPO, a GAM337218 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337218 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM337220 APBB2 GCTGGGTTGAGCTGG GCTGAGA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337220 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337220 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337220 is therefore inhibition of APBB2, a GAM337220 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337220 CRAT GCTGGGTTGAGCTGG GCTGAGA Carnitine Acetyltransferase (CRAT, Accession NM_144782.1) is another GAM337220 target gene. CRAT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as A A

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337220 is therefore inhibition of CRAT, a GAM337220 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337220 IGF1 GCTGGGTTGAGCTGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GCTGAGA NM_000618.2) is another GAM337220 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337220 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337220 is therefore inhibition of IGF1, a GAM337220 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337220 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337221 BACE GCAGAGAGGAAGGCT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A

ATGAAAC is a GAM337221 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337221 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337221 is therefore inhibition of BACE, a GAM337221 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337221 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The

function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337224 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337224 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337224 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337224 is therefore inhibition of APP. Accordingly, utilities of GAM337224 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337225 HD GGTGACAGAGACTCT HD (Accession NM_002111.3) is a GAM337225 target gene. HD A A
GCCTCGA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337225 is therefore inhibition of HD. Accordingly, utilities of GAM337225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337225 TFCP2 GGTGACAGAGACTCT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A
GCCTCGA another GAM337225 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337225 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337225 is therefore inhibition of TFCP2, a GAM337225 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337225 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337226 APPBP2 TACCCTGTGATCATC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGTGTGC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337226 target

gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337226 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337226 is therefore inhibition of APPBP2, a GAM337226 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337226 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337227 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337227 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337227 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337227 is therefore inhibition of APPBP2, a GAM337227 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337227 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337227 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337227 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337227 is therefore inhibition of

BACE2, a GAM337227 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337227 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337227 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337227 is therefore inhibition of FHL2, a GAM337227 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337227 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337227 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337227 is therefore inhibition of IGF1, a GAM337227 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337227 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337227 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337227 is therefore inhibition of MME, a GAM337227 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337227 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337227 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337227 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337227 is therefore inhibition of PRND, a GAM337227 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337227 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337228 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337228 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337228 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337228 is therefore inhibition of APP. Accordingly, utilities of GAM337228 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337229 ACE AGCACCACAACAGGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

ACTGGGC (ACE, Accession NM_152831.1) is a GAM337229 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337229 is therefore inhibition of ACE, a GAM337229 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337229 PLCD1 AGCACCACAACAGGG Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is
A A

ACTGGGC another GAM337229 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337229 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337229 is therefore inhibition of PLCD1, a GAM337229 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM337229 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM337230 UBB TTCACCAACCACTCC Ubiquitin B (UBB, Accession NM_018955.2) is a GAM337230 target
A A

ACCAGCT gene. UBB BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by UBB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of UBB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337230 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337230 is therefore inhibition of UBB, a GAM337230 target gene which marks cellular proteins for degradation

and therefore is associated with Alzheimer. Accordingly, utilities of GAM337230 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with UBB.The function of UBB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM3298.

GAM337232 PSEN1 TATTGGGTTTAAAGT PSEN1 (Accession NM_007318.1) is a GAM337232 target gene. PSEN1 A A

CACCGTT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337232 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337232 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337232 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337233 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337233 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337233 is therefore inhibition of APPBP2, a GAM337233 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337233 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337233 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337233 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337233 is therefore inhibition of BACE2, a GAM337233 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337233 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337233 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337233 is therefore inhibition of FHL2, a GAM337233 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337233 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337233 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337233 is therefore inhibition of IGF1, a GAM337233 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM337233 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337233 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337233 is therefore inhibition of MME, a GAM337233 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337233 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337233 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337233 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337233 is therefore inhibition of PRND, a GAM337233 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337233 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337234 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337234 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337234 is therefore inhibition of APPBP2, a GAM337234 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337234 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337234 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337234 is therefore inhibition of BACE2, a GAM337234 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337234 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337234 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337234 is therefore inhibition of FHL2, a GAM337234 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337234 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM337234 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337234 is therefore inhibition of IGF1, a GAM337234 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337234 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337234 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337234 is therefore inhibition of MME, a GAM337234 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337234 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM337234 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337234 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337234 is therefore inhibition of PRND, a GAM337234 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337234 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337235 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337235 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337235 is therefore inhibition of APPBP2, a GAM337235 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337235 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337235 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337235 is therefore inhibition of BACE2, a GAM337235 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337235 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337235 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337235 is therefore inhibition of FHL2, a GAM337235 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337235 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337235 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337235 is therefore inhibition of IGF1, a GAM337235 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337235 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337235 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337235 is therefore inhibition of

MME, a GAM337235 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337235 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337235 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337235 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337235 is therefore inhibition of PRND, a GAM337235 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337235 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337237 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337237 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337237 is therefore inhibition of APPBP2, a GAM337237 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337237 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337237 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337237 is therefore inhibition of BACE2, a GAM337237 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337237 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337237 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337237 is therefore inhibition of FHL2, a GAM337237 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337237 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337237 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337237 is therefore inhibition of IGF1, a GAM337237 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337237 MME ACTGCACTCCAGCCT GGGCAAC A A

Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337237 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337237 is therefore inhibition of MME, a GAM337237 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337237 PRND ACTGCACTCCAGCCT GGGCAAC A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337237 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337237 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337237 is therefore inhibition of PRND, a GAM337237 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337237 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337238 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337238 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by

APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337238 is therefore inhibition of APPBP2, a GAM337238 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337238 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337238 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337238 is therefore inhibition of BACE2, a GAM337238 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337238 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337238 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337238 is therefore inhibition of FHL2, a GAM337238 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM337238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337238 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337238 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337238 is therefore inhibition of IGF1, a GAM337238 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337238 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337238 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337238 is therefore inhibition of MME, a GAM337238 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337238 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337238 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337238 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337238 is therefore inhibition of PRND, a GAM337238 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337238 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337242 NGB AGATATGGTGAACAG Neuroglobin (NGB, Accession NM_021257.2) is a GAM337242 target A A
ACAGATG gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337242 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337242 is therefore inhibition of NGB, a GAM337242 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337242 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337243 APPBP2 TGCTACATTTCTTCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TTCTTGG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337243 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337243 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337243 is therefore inhibition of APPBP2, a GAM337243 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337243 IGF1 TGCTACATTTCTTCA TTCTTGG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337243 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337243 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337243 is therefore inhibition of IGF1, a GAM337243 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337243 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337245 HTR2A TAGAAAGCTAACAAG CTAGAGA 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is a GAM337245 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337245 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337245 is therefore inhibition of HTR2A, a GAM337245 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337245 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337245 MME TAGAAAGCTAACAAG CTAGAGA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337245 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337245 RNA are set forth in Tables 6 and A A

7, hereby incorporated herein.

Another function of GAM337245 is therefore inhibition of MME, a GAM337245 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337245 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337246 HTR2A TAGAAAGCTAACAAG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
CTAGAGA NM_000621.1) is a GAM337246 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337246 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337246 is therefore inhibition of HTR2A, a GAM337246 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337246 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337246 MME TAGAAAGCTAACAAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A
CTAGAGA enkephalinase, (MME, Accession NM_000902.2) is another GAM337246 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337246 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337246 is therefore inhibition of MME, a GAM337246 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337246 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337247 MAPK10 AAGAGCTGAGTAATT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

GGGGGCA NM_002753.2) is a GAM337247 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337247 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337247 is therefore inhibition of MAPK10, a GAM337247 target gene which is a members of the mitogen- activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337247 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337247 MAPT AAGAGCTGAGTAATT Microtubule- associated Protein Tau (MAPT, Accession A A
GGGGGCA NM_005910.2) is another GAM337247 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337247 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337247 is therefore inhibition of MAPT, a GAM337247 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337247 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337247 SNCA AAGAGCTGAGTAATT SNCA (Accession NM_000345.2) is another GAM337247 target gene. A A
GGGGGCA SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337247 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337247 is therefore inhibition of SNCA. Accordingly, utilities of GAM337247 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM337248 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337248 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337248 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337248 is therefore inhibition of APP. Accordingly, utilities of GAM337248 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337250 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337250 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337250 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337250 is therefore inhibition of APP. Accordingly, utilities of GAM337250 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337251 GFAP TATCGCTTGAGCCCA GFAP (Accession NM_002055.2) is a GAM337251 target gene. GFAP A A

GGAGTTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337251 is therefore inhibition of GFAP. Accordingly, utilities of GAM337251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337251 IGF1 TATCGCTTGAGCCCA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGAGTTT NM_000618.2) is another GAM337251 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337251 is therefore inhibition of IGF1, a GAM337251 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337251 PRND TATCGCTTGAGCCCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGAGTTT another GAM337251 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337251 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337251 is therefore inhibition of PRND, a GAM337251 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337251 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337254 BACE TTTCCTGTTTTGGTT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138973.1) A A TGGAGAG is a GAM337254 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337254 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337254 is therefore inhibition of BACE, a GAM337254 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337254 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337254 GYPA TTTCCTGTTTTGGTT Glycophorin A (includes MN blood group) (GYPA, Accession A A

TGGAGAG NM_002099.2) is another GAM337254 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337254 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337254 is therefore inhibition of GYPA, a GAM337254 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337254 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337255 GFAP TGGCTCAGTTTGCTC GFAP (Accession NM_002055.2) is a GAM337255 target gene. GFAP A A

AGCAGTG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337255 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337255 is therefore inhibition of GFAP. Accordingly, utilities of GAM337255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337255 IL1A TGGCTCAGTTTGCTC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

AGCAGTG GAM337255 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337255 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337255 is therefore inhibition of IL1A, a GAM337255 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337255 PSEN2 TGGCTCAGTTTGCTC PSEN2 (Accession NM_012486.1) is another GAM337255 target gene. A A

AGCAGTG PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337255 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337255 is therefore inhibition of PSEN2. Accordingly, utilities of GAM337255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM337255 S100B TGGCTCAGTTTGCTC S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A
AGCAGTG NM_006272.1) is another GAM337255 target gene. S100B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337255 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337255 is therefore inhibition of S100B, a GAM337255 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM337255 SNCAIP TGGCTCAGTTTGCTC Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, A A
AGCAGTG Accession NM_005460.1) is another GAM337255 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337255 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337255 is therefore inhibition of SNCAIP, a GAM337255 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337255 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337256 GFAP TGGCTCAGTTTGCTC GFAP (Accession NM_002055.2) is a GAM337256 target gene. GFAP A A

AGCAGTG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337256 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337256 is therefore inhibition of GFAP. Accordingly, utilities of GAM337256 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337256 IL1A TGGCTCAGTTTGCTC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

AGCAGTG GAM337256 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337256 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337256 is therefore inhibition of IL1A, a GAM337256 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337256 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337256 PSEN2 TGGCTCAGTTTGCTC PSEN2 (Accession NM_012486.1) is another GAM337256 target gene. A A

AGCAGTG PSEN2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337256 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337256 is therefore inhibition of PSEN2. Accordingly, utilities of GAM337256 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM337256 S100B TGGCTCAGTTTGCTC S100 Calcium- binding Protein, Beta (neural) (S100B, Accession A A

AGCAGTG NM_006272.1) is another GAM337256 target gene. S100B BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by S100B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of S100B BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337256 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337256 is therefore inhibition of S100B, a GAM337256 target gene which weakly binds calcium but binds zinc very tightly- distinct binding sites with different affinities exist for both ions on each monomer. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337256 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with S100B.The function of S100B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.

GAM337256 SNCAIP TGGCTCAGTTTGCTC AGCAGTG Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is another GAM337256 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337256 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337256 is therefore inhibition of SNCAIP, a GAM337256 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337256 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337257 FHL2 TGGCTGTTTGGGGTT GCCGTGT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is a GAM337257 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337257 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337257 is therefore inhibition of FHL2, a GAM337257 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337257 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337257 MAPK10 TGGCTGTTTGGGGTT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

GCCGTGT NM_138980.1) is another GAM337257 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337257 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337257 is therefore inhibition of MAPK10, a GAM337257 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337257 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337258 FHL2 TGGCTGTTTGGGGTT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GCCGTGT a GAM337258 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337258 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337258 is therefore inhibition of FHL2, a GAM337258 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337258 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337258 MAPK10 TGGCTGTTTGGGGTT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

GCCGTGT NM_138980.1) is another GAM337258 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337258 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337258 is therefore inhibition of MAPK10, a GAM337258 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337258 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337263 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337263 target gene. APP
A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337263 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337263 is therefore inhibition of APP. Accordingly, utilities of GAM337263 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337264 APBA2 TAGTTGTTTGGGATT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A
A

GGTAGTG 2 (X11- I (APBA2, Accession NM_005503.2) is a GAM337264 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337264 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337264 is therefore inhibition of APBA2, a GAM337264 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337264 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337264 HTR2C TAGTTGTTTGGGATT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A

GGTAGTG NM_000868.1) is another GAM337264 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337264 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337264 is therefore inhibition of HTR2C, a GAM337264 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337264 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337265 APBA2 TAGTTGTTTGGGATT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGTAGTG 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM337265 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337265 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337265 is therefore inhibition of APBA2, a GAM337265 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337265 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337265 HTR2C TAGTTGTTTGGGATT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

GGTAGTG NM_000868.1) is another GAM337265 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337265 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337265 is therefore inhibition of HTR2C, a GAM337265 target gene which activates phospholipase C and

regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337265 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337266 APBA2 TAGTTGTTTGGGATT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGTAGTG 2 (X11- l (APBA2, Accession NM_005503.2) is a GAM337266 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337266 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337266 is therefore inhibition of APBA2, a GAM337266 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337266 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337266 HTR2C TAGTTGTTTGGGATT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A

GGTAGTG NM_000868.1) is another GAM337266 target gene. HTR2C BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337266 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337266 is therefore inhibition of HTR2C, a GAM337266 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337266 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337267 ESR2 TGCAGCAGACCTTTT Estrogen Receptor 2 (ER beta) (ESR2, Accession NM_001437.1) is A A

GCCTTCT a GAM337267 target gene. ESR2 BINDING SITE is a target binding site

found in the 5` untranslated region of mRNA encoded by ESR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ESR2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337267 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337267 is therefore inhibition of ESR2, a GAM337267 target gene which transcriptional activator involved in regulation of reproduction. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337267 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ESR2.The function of ESR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM4188.

GAM337269 CAV1 AGTAAGCAAACTCAG TTTAATC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM337269 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337269 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337269 is therefore inhibition of CAV1, a GAM337269 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337269 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337269 FOS AGTAAGCAAACTCAG TTTAATC V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, Accession NM_005252.2) is another GAM337269 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337269 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337269 is therefore inhibition of FOS, a GAM337269 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337269 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337269 MAPK10 AGTAAGCAAACTCAG Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

TTTAATC NM_138982.1) is another GAM337269 target gene. MAPK10 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337269 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337269 is therefore inhibition of MAPK10, a GAM337269 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337269 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337270 APBB2 TGATGACTGAAGTGG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CCTGGAC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337270 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337270 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337270 is therefore inhibition of APBB2, a GAM337270 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337270 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337271 APBB2 TGATGACTGAAGTGG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

CCTGGAC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337271 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337271 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337271 is therefore inhibition of APBB2, a GAM337271 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337271 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337273 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337273 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337273 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337273 is therefore inhibition of APPBP2, a GAM337273 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337273 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337273 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337273 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337273 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337273 is therefore inhibition of BACE2, a GAM337273 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM337273 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337273 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337273 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337273 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337273 is therefore inhibition of FHL2, a GAM337273 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337273 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337273 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337273 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337273 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337273 is therefore inhibition of IGF1, a GAM337273 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337273 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337273 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337273 target gene. MME BINDING SITE is a target binding site found in the

5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337273 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337273 is therefore inhibition of MME, a GAM337273 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337273 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337273 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM337273 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337273 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337273 is therefore inhibition of PRND, a GAM337273 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337273 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337274 ADAM10 ACTGGAGTTTGTTCA A Disintegrin and Metalloproteinase Domain 10 (ADAM10, A A AGAAATA Accession NM_001110.1) is a GAM337274 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337274 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337274 is therefore inhibition of ADAM10, a GAM337274 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337274 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337275 ADAM10 ACTGGAGTTTGTTCA AGAAATA A Disintegrin and Metalloproteinase Domain 10 (ADAM10, Accession NM_001110.1) is a GAM337275 target gene. ADAM10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAM10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337275 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337275 is therefore inhibition of ADAM10, a GAM337275 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337275 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM10.The function of ADAM10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337277 ADAM17 TTAGATATGTCCCCT TCTATAA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is a GAM337277 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337277 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337277 is therefore inhibition of ADAM17, a GAM337277 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337277 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337278 HD AGTCCAGTGTTCTCT GCTCTGT HD (Accession NM_002111.3) is a GAM337278 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337278 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337278 is therefore inhibition of HD. Accordingly, utilities of GAM337278 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337278 TFCP2 AGTCCAGTGTTCTCT GCTCTGT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is another GAM337278 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337278 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337278 is therefore inhibition of TFCP2, a GAM337278 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337278 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337279 ACE GAGGTCACTGTTGGA TGTCAGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM337279 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337279 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337279 is therefore inhibition of ACE, a GAM337279 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337279 APLP2 GAGGTCACTGTTGGA TGTCAGA Amyloid Beta (A4) Precursor- like Protein 2 (APLP2, Accession NM_001642.1) is another GAM337279 target gene. APLP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APLP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. A A

Nucleotide sequences of APLP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337279 is therefore inhibition of APLP2, a GAM337279 target gene which may play a role in the regulation of hemostasis. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP2.The function of APLP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM674.

GAM337279 APOC1 GAGGTCACTGTTGGA A A TGTCAGA Apolipoprotein C- I (APOC1, Accession NM_001645.2) is another GAM337279 target gene. APOC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APOC1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337279 is therefore inhibition of APOC1, a GAM337279 target gene which appears to modulate the interaction of apoe with beta- migrating vldl and inhibit binding of beta- vldl to the ldl receptor- related protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APOC1.The function of APOC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1144.

GAM337279 B2M GAGGTCACTGTTGGA A A TGTCAGA Beta- 2- microglobulin (B2M, Accession NM_004048.1) is another GAM337279 target gene. B2M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B2M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of B2M BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337279 is therefore inhibition of B2M, a GAM337279 target gene which is the beta- chain of major histocompatibility complex class I molecules. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with B2M.The function of B2M and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM337279 FOS A TGTCAGA A GAGGTCACTGTTGGA V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, Accession NM_005252.2) is another GAM337279 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337279 is therefore inhibition of FOS, a GAM337279 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337279 HD A TGTCAGA A GAGGTCACTGTTGGA HD (Accession NM_002111.3) is another GAM337279 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337279 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337279 is therefore inhibition of HD. Accordingly, utilities of GAM337279 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337281 APPBP2 A GGGCAAC A ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337281 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337281 is therefore inhibition of APPBP2, a GAM337281 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337281 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337281 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337281 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337281 is therefore inhibition of BACE2, a GAM337281 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337281 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337281 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337281 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337281 is therefore inhibition of FHL2, a GAM337281 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337281 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337281 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337281 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337281 is therefore inhibition of IGF1, a GAM337281 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337281 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337281 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337281 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337281 is therefore inhibition of MME, a GAM337281 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337281 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337281 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337281 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337281 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337281 is therefore inhibition of PRND, a GAM337281 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337281 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337282 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337282 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337282 is therefore inhibition of APPBP2, a GAM337282 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337282 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337282 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337282 is therefore inhibition of BACE2, a GAM337282 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337282 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337282 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337282 is therefore inhibition of FHL2, a GAM337282 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337282 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337282 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337282 is therefore inhibition of IGF1, a GAM337282 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337282 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337282 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337282 is therefore inhibition of MME, a GAM337282 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated

with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337282 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337282 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337282 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337282 is therefore inhibition of PRND, a GAM337282 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337282 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337283 ABCD1 GGCACTGAGAAGCAA ABCD1 (Accession NM_000033.2) is a GAM337283 target gene. ABCD1 A A

ACAGGAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337283 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337283 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337283 GLUL GGCACTGAGAAGCAA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

ACAGGAT NM_002065.3) is another GAM337283 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337283 is therefore inhibition of GLUL, a GAM337283 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337283 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337283 MAPT GGCACTGAGAAGCAA Microtubule- associated Protein Tau (MAPT, Accession A A

ACAGGAT NM_173727.1) is another GAM337283 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337283 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337283 is therefore inhibition of MAPT, a GAM337283 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337283 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337285 APPBP2 GGAGGAGGTGTGAAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

AAATGAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337285 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337285 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337285 is therefore inhibition of APPBP2, a GAM337285 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337285 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337285 GLUL GGAGGAGGTGTGAAG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

AAATGAA NM_002065.3) is another GAM337285 target gene. GLUL BINDING SITE1 and GLUL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GLUL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE1 and GLUL BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337285 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337285 is therefore inhibition of GLUL, a GAM337285 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337285 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337285 MME GGAGGAGGTGTGAAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

AAATGAA enkephalinase, (MME, Accession NM_007288.1) is another GAM337285 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337285 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337285 is therefore inhibition of MME, a GAM337285 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337285 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337286 APPBP2 GGAGGAGGTGTGAAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

AAATGAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337286 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337286 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337286 is therefore inhibition of APPBP2, a GAM337286 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337286 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337286 GLUL GGAGGAGGTGTGAAG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

AAATGAA NM_002065.3) is another GAM337286 target gene. GLUL BINDING SITE1 and GLUL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GLUL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE1 and GLUL BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337286 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337286 is therefore inhibition of GLUL, a GAM337286 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337286 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337286 MME GGAGGAGGTGTGAAG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

AAATGAA enkephalinase, (MME, Accession NM_007288.1) is another GAM337286 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337286 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337286 is therefore inhibition of MME, a GAM337286 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337286 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337288 ADAM17 CACTGGGATTACAGA A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

TGTGAGC factor, (ADAM17, Accession NM_021832.1) is a GAM337288 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM337288 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337288 is therefore inhibition of ADAM17, a GAM337288 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337288 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337288 MTNR1A CACTGGGATTACAGA A A TGTGAGC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM337288 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337288 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337288 is therefore inhibition of MTNR1A, a GAM337288 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337288 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337288 TGFB1 CACTGGGATTACAGA A A TGTGAGC TGFB1 (Accession NM_000660.1) is another GAM337288 target gene. TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337288 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337288 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337288 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337289 ADAM17 CACTGGGATTACAGA A A TGTGAGC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis factor, (ADAM17, Accession NM_021832.1) is a GAM337289 target gene. ADAM17 BINDING SITE is a target binding site found in the 3`

untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337289 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337289 is therefore inhibition of ADAM17, a GAM337289 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337289 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337289 MTNR1A CACTGGGATTACAGA A A TGTGAGC Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM337289 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337289 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337289 is therefore inhibition of MTNR1A, a GAM337289 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337289 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337289 TGFB1 CACTGGGATTACAGA A A TGTGAGC TGFB1 (Accession NM_000660.1) is another GAM337289 target gene. TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337289 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337289 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337289 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337290 ADAM17 TCACAGAGACTTGGG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis
A A
CCTCAAA factor, (ADAM17, Accession NM_003183.3) is a GAM337290 target gene.
ADAM17 BINDING SITE is a target binding site found in the 3`
untranslated region of multiple transcripts of mRNA encoded by
ADAM17, corresponding to a target binding site such as BINDING SITE
I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide
sequences of ADAM17 BINDING SITE, and secondary structure
complementarity to the nucleotide sequence of GAM337290 RNA are set
forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337290 is therefore inhibition of ADAM17,
a GAM337290 target gene which is a member of ADAM family of zinc
metalloproteases. and therefore is associated with Alzheimer.
Accordingly, utilities of GAM337290 include diagnosis, prevention
and treatment of Alzheimer, and of other diseases and clinical
conditions associated with ADAM17.The function of ADAM17 and its
association with various diseases and clinical conditions, has been
established by previous studies, as described hereinabove with
reference to GAM317.
GAM337291 HD ATAAGCACAGGGAGG HD (Accession NM_002111.3) is a GAM337291 target gene. HD
A A
TTCTGTC BINDING SITE is a target binding site found in the 3` untranslated
region of mRNA encoded by HD, corresponding to a target binding site
such as BINDING SITE I, BINDING SITE II or BINDING SITE III of
Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary
structure complementarity to the nucleotide sequence of GAM337291
RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337291 is therefore inhibition of HD.
Accordingly, utilities of GAM337291 include diagnosis, prevention
and treatment of Alzheimer, and of other diseases and clinical
conditions associated with HD.
GAM337291 HTR2C ATAAGCACAGGGAGG 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession
A A
TTCTGTC NM_000868.1) is another GAM337291 target gene. HTR2C BINDING SITE is
a target binding site found in the 3` untranslated region of mRNA
encoded by HTR2C, corresponding to a target binding site such as
BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.
Nucleotide sequences of HTR2C BINDING SITE, and secondary structure
complementarity to the nucleotide sequence of GAM337291 RNA are set
forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337291 is therefore inhibition of
HTR2C, a GAM337291 target gene which activates phospholipase C and
regulates intracellular calcium flux. and therefore is associated
with Alzheimer. Accordingly, utilities of GAM337291 include
diagnosis, prevention and treatment of Alzheimer, and of other
diseases and clinical conditions associated with HTR2C.The function
of HTR2C and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337291 LRP1 ATAAGCACAGGGAGG TTCTGTC A A Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337291 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337291 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337291 is therefore inhibition of LRP1, a GAM337291 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337291 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337291 TRPM2 ATAAGCACAGGGAGG TTCTGTC A A TRPM2 (Accession NM_003307.1) is another GAM337291 target gene. TRPM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337291 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337291 is therefore inhibition of TRPM2, a GAM337291 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM337291 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337292 APP TGTGCACAACATGCA GGTTTGT A A APP (Accession NM_000484.1) is a GAM337292 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337292 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337292 is therefore inhibition of APP. Accordingly, utilities of GAM337292 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337293 GFAP TTCAGTTCTTGACCT GFAP (Accession NM_002055.2) is a GAM337293 target gene. GFAP A A

GCCCCAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337293 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337293 is therefore inhibition of GFAP. Accordingly, utilities of GAM337293 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337293 NGB TTCAGTTCTTGACCT Neuroglobin (NGB, Accession NM_021257.2) is another GAM337293 A A

GCCCCAG target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337293 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337293 is therefore inhibition of NGB, a GAM337293 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337293 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337293 TFCP2 TTCAGTTCTTGACCT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A

GCCCCAG another GAM337293 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337293 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337293 is therefore inhibition of TFCP2, a GAM337293 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337293 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337294 GFAP TTCAGTTCTTGACCT GFAP (Accession NM_002055.2) is a GAM337294 target gene.
GFAP A A
GCCCCAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337294 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337294 is therefore inhibition of GFAP. Accordingly, utilities of GAM337294 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337294 NGB TTCAGTTCTTGACCT Neuroglobin (NGB, Accession NM_021257.2) is another GAM337294
A A
GCCCCAG target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337294 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337294 is therefore inhibition of NGB, a GAM337294 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337294 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337294 TFCP2 TTCAGTTCTTGACCT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A
A
GCCCCAG another GAM337294 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337294 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337294 is therefore inhibition of TFCP2, a GAM337294 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337294 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337296 BAX GTGAGAATGGAGGAA A A GAACAGT BCL2- associated X Protein (BAX, Accession NM_138763.1) is a GAM337296 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337296 is therefore inhibition of BAX, a GAM337296 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM337296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM337296 CASP3 GTGAGAATGGAGGAA A A GAACAGT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_004346.2) is another GAM337296 target gene. CASP3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337296 is therefore inhibition of CASP3, a GAM337296 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337296 MME GTGAGAATGGAGGAA A A GAACAGT Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337296 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337296 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337296 is therefore inhibition of MME, a GAM337296 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337296 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337297 BAX GTGAGAATGGAGGAA BCL2- associated X Protein (BAX, Accession NM_138763.1) is a A A
GAACAGT GAM337297 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337297 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337297 is therefore inhibition of BAX, a GAM337297 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM337297 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM337297 CASP3 GTGAGAATGGAGGAA Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A
GAACAGT Accession NM_004346.2) is another GAM337297 target gene. CASP3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337297 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337297 is therefore inhibition of CASP3, a GAM337297 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337297 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337297 MME GTGAGAATGGAGGAA Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GAACAGT enkephalinase, (MME, Accession NM_000902.2) is another GAM337297 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337297 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337297 is therefore inhibition of MME, a GAM337297 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337297 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337298 CTSB AGGCTGAGTGACTGG CTSB (Accession NM_147782.1) is a GAM337298 target gene. CTSB A A

GAGTTAG BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337298 is therefore inhibition of CTSB. Accordingly, utilities of GAM337298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM337298 MME AGGCTGAGTGACTGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GAGTTAG enkephalinase, (MME, Accession NM_007288.1) is another GAM337298 target gene. MME BINDING SITE1 and MME BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MME, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE1 and MME BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337298 is therefore inhibition of MME, a GAM337298 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM25.

GAM337298 NCSTN AGGCTGAGTGACTGG NCSTN (Accession NM_015331.1) is another GAM337298 target gene. A A

GAGTTAG NCSTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337298 is therefore inhibition of NCSTN, a GAM337298 target gene which has a central role in presenilin- mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp-1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337298 SLC17A7 AGGCTGAGTGACTGG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

GAGTTAG NM_020309.1) is another GAM337298 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337298 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337298 is therefore inhibition of SLC17A7, a GAM337298 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337298 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337299 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GAGTGAC a GAM337299 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337299 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337299 is therefore inhibition of FHL2, a GAM337299 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337299 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337299 HD ACTGCACTCCATCCT HD (Accession NM_002111.3) is another GAM337299 target gene. HD A A

GAGTGAC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337299 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337299 is therefore inhibition of HD. Accordingly, utilities of GAM337299 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337299 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GAGTGAC NM_000618.2) is another GAM337299 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337299 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337299 is therefore inhibition of IGF1, a GAM337299 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337299 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337299 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GAGTGAC another GAM337299 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337299 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337299 is therefore inhibition of PRND, a GAM337299 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337299 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337300 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GAGTGAC a GAM337300 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337300 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337300 is therefore inhibition of FHL2, a GAM337300 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337300 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337300 HD ACTGCACTCCATCCT HD (Accession NM_002111.3) is another GAM337300 target gene. HD A A

GAGTGAC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337300 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337300 is therefore inhibition of HD. Accordingly, utilities of GAM337300 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337300 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GAGTGAC NM_000618.2) is another GAM337300 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM337300 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337300 is therefore inhibition of IGF1, a GAM337300 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337300 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337300 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GAGTGAC another GAM337300 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337300 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337300 is therefore inhibition of PRND, a GAM337300 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337300 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337301 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337301 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337301 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337301 is therefore inhibition of APP. Accordingly, utilities of GAM337301 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337302 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337302 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary

structure complementarity to the nucleotide sequence of GAM337302 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337302 is therefore inhibition of APP. Accordingly, utilities of GAM337302 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337303 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337303 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337303 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337303 is therefore inhibition of APPBP2, a GAM337303 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337303 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337303 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337303 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337303 is therefore inhibition of BACE2, a GAM337303 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337303 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337303 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337303 is therefore inhibition of FHL2, a GAM337303 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337303 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337303 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337303 is therefore inhibition of IGF1, a GAM337303 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337303 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337303 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337303 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337303 is therefore inhibition of

MME, a GAM337303 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337303 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337303 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337303 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337303 is therefore inhibition of PRND, a GAM337303 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337303 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337304 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337304 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337304 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337304 is therefore inhibition of APPBP2, a GAM337304 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337304 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337304 target gene. BACE2 BINDING SITE is A A

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337304 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337304 is therefore inhibition of BACE2, a GAM337304 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337304 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337304 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337304 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337304 is therefore inhibition of FHL2, a GAM337304 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337304 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337304 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337304 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337304 is therefore inhibition of IGF1, a GAM337304 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337304 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337304 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337304 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337304 is therefore inhibition of MME, a GAM337304 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337304 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337304 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337304 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337304 is therefore inhibition of PRND, a GAM337304 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337304 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337305 SNCAIP CAGAAAGTAGAAAGC AGATTCG Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is a GAM337305 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. A A

Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337305 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337305 is therefore inhibition of SNCAIP, a GAM337305 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337305 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337306 SNCAIP CAGAAAGTAGAAAGC AGATTCG Synuclein, Alpha Interacting Protein (synphilin) (SNCAIP, Accession NM_005460.1) is a GAM337306 target gene. SNCAIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCAIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCAIP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337306 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337306 is therefore inhibition of SNCAIP, a GAM337306 target gene which promotes formation of cytosolic inclusions in neurons. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337306 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCAIP.The function of SNCAIP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1300.

GAM337310 APP TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337310 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337310 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337310 is therefore inhibition of APP. Accordingly, utilities of GAM337310 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337311 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337311 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or A A

BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337311 is therefore inhibition of APPBP2, a GAM337311 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337311 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337311 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337311 is therefore inhibition of BACE2, a GAM337311 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337311 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337311 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337311 is therefore inhibition of FHL2, a GAM337311 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337311 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337311 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337311 is therefore inhibition of HD. Accordingly, utilities of GAM337311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337311 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337311 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337311 is therefore inhibition of IGF1, a GAM337311 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337311 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337311 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337311 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337311 is therefore inhibition of

PRND, a GAM337311 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337311 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337312 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337312 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337312 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337312 is therefore inhibition of APPBP2, a GAM337312 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337312 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337312 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337312 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337312 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337312 is therefore inhibition of BACE2, a GAM337312 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337312 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337312 FHL2 CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337312 target gene. FHL2 BINDING SITE1 and FHL2 BINDING A A

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337312 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337312 is therefore inhibition of FHL2, a GAM337312 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337312 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337312 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337312 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337312 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337312 is therefore inhibition of HD. Accordingly, utilities of GAM337312 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337312 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337312 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337312 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337312 is therefore inhibition of IGF1, a GAM337312 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337312 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM337312 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337312 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337312 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337312 is therefore inhibition of PRND, a GAM337312 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337312 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337313 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337313 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337313 is therefore inhibition of APPBP2, a GAM337313 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337313 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337313 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337313 is therefore inhibition of BACE2, a GAM337313 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337313 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337313 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337313 is therefore inhibition of FHL2, a GAM337313 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337313 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337313 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337313 is therefore inhibition of HD. Accordingly, utilities of GAM337313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337313 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337313 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337313 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337313 is therefore inhibition of IGF1, a GAM337313 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337313 PRND CATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337313 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337313 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337313 is therefore inhibition of PRND, a GAM337313 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337313 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337314 APPBP2 ATTGCACTTCAGCCT GGGTGAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337314 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337314 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337314 is therefore inhibition of APPBP2, a GAM337314 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337314 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337314 FHL2 ATTGCACTTCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGTGAC another GAM337314 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337314 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337314 is therefore inhibition of FHL2, a GAM337314 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337314 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337314 IGF1 ATTGCACTTCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGTGAC NM_000618.2) is another GAM337314 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337314 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337314 is therefore inhibition of IGF1, a GAM337314 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337314 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337314 PRND ATTGCACTTCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGTGAC another GAM337314 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337314 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337314 is therefore inhibition of PRND, a GAM337314 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337314 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337314 TNFRSF5 ATTGCACTTCAGCCT TNFRSF5 (Accession NM_152854.1) is another GAM337314 target A A

GGGTGAC gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337314 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337314 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM337314 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM337315 ACE AGGTGGCACTGTGTG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GGGTGGG (ACE, Accession NM_152831.1) is a GAM337315 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337315 is therefore inhibition of ACE, a GAM337315 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337315 APBB2 AGGTGGCACTGTGTG Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GGGTGGG 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM337315 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337315 is therefore inhibition of APBB2, a GAM337315 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337315 FOS AGGTGGCACTGTGTG V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
GGGTGGG Accession NM_005252.2) is another GAM337315 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337315 is therefore inhibition of FOS, a GAM337315 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337315 HD AGGTGGCACTGTGTG HD (Accession NM_002111.3) is another GAM337315 target gene. HD A A
GGGTGGG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337315 is therefore inhibition of HD. Accordingly, utilities of GAM337315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337315 NCSTN AGGTGGCACTGTGTG NCSTN (Accession NM_015331.1) is another GAM337315 target gene. A A
GGGTGGG NCSTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337315 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337315 is therefore inhibition of NCSTN, a GAM337315 target gene which has a central role in presenilin- mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp-1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337315 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337317 APBB2 GAGGTGAAGGAACAA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

ATGCTGA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337317 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337317 is therefore inhibition of APBB2, a GAM337317 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337317 SNCA GAGGTGAAGGAACAA SNCA (Accession NM_000345.2) is another GAM337317 target gene. A A

ATGCTGA SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337317 is therefore inhibition of SNCA. Accordingly, utilities of GAM337317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and

clinical conditions associated with SNCA.

GAM337317 TFCP2 GAGGTGAAGGAACAA Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A

ATGCTGA another GAM337317 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337317 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337317 is therefore inhibition of TFCP2, a GAM337317 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337317 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337318 APBB2 GAGGTGAAGGAACAA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

ATGCTGA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337318 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337318 is therefore inhibition of APBB2, a GAM337318 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337318 SNCA GAGGTGAAGGAACAA SNCA (Accession NM_000345.2) is another GAM337318 target gene. A A

ATGCTGA SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337318 is therefore inhibition of SNCA. Accordingly, utilities of GAM337318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM337318 TFCP2 GAGGTGAAGGAACAA Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is
A A
ATGCTGA another GAM337318 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337318 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337318 is therefore inhibition of TFCP2, a GAM337318 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337318 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337319 APBB2 GAGGTGAAGGAACAA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member
A A
ATGCTGA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337319 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337319 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337319 is therefore inhibition of APBB2, a GAM337319 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337319 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337319 SNCA GAGGTGAAGGAACAA SNCA (Accession NM_000345.2) is another GAM337319 target gene. A A
ATGCTGA SNCA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCA BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337319 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337319 is therefore inhibition of SNCA. Accordingly, utilities of GAM337319 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCA.

GAM337319 TFCP2 GAGGTGAAGGAACAA Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A
ATGCTGA another GAM337319 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337319 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337319 is therefore inhibition of TFCP2, a GAM337319 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337319 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337320 CAV1 TCCCCAAGCCTTGTA Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A
CCAGCGT NM_001753.3) is a GAM337320 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337320 is therefore inhibition of CAV1, a GAM337320 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337320 GFAP TCCCCAAGCCTTGTA GFAP (Accession NM_002055.2) is another GAM337320 target gene. A A
CCAGCGT GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337320 is therefore inhibition of GFAP. Accordingly, utilities of GAM337320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337320 TFCP2 TCCCCAAGCCTTGTA Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A
CCAGCGT another GAM337320 target gene. TFCP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337320 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337320 is therefore inhibition of TFCP2, a GAM337320 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337320 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337321 FHL2 ACCTGCATTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGCTGAC a GAM337321 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337321 is therefore inhibition of FHL2, a GAM337321 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337321 IGF1 ACCTGCATTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGCTGAC NM_000618.2) is another GAM337321 target gene. IGF1 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337321 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337321 is therefore inhibition of IGF1, a GAM337321 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337321 MAPT ACCTGCATTCCAGCC TGCTGAC Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is another GAM337321 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337321 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337321 is therefore inhibition of MAPT, a GAM337321 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337321 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337324 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337324 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337324 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337324 is therefore inhibition of APPBP2,

a GAM337324 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337324 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337324 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337324 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337324 is therefore inhibition of BACE2, a GAM337324 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337324 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337324 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337324 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337324 is therefore inhibition of FHL2, a GAM337324 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337324 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337324 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337324 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337324 is therefore inhibition of IGF1, a GAM337324 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337324 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337324 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337324 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337324 is therefore inhibition of MME, a GAM337324 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337324 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337324 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337324 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337324 is therefore inhibition of PRND, a GAM337324 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337324 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337326 ABCD1 CTTTGGCCACGGGGA ABCD1 (Accession NM_000033.2) is a GAM337326 target gene.
ABCD1 A A
TATGAAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337326 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337326 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337326 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337326 DHCR24 CTTTGGCCACGGGGA 24- dehydrocholesterol Reductase (DHCR24, Accession
A A
TATGAAT NM_014762.1) is another GAM337326 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337326 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337326 is therefore inhibition of DHCR24, a GAM337326 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337326 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337327 ABCD1 CTTTGGCCACGGGGA ABCD1 (Accession NM_000033.2) is a GAM337327 target gene.
ABCD1 A A
TATGAAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337327 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337327 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337327 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with ABCD1.

GAM337327 DHCR24 CTTTGGCCACGGGGA A A TATGAAT 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM337327 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337327 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337327 is therefore inhibition of DHCR24, a GAM337327 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337327 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337328 ABCD1 CTTTGGCCACGGGGA A A TATGAAT ABCD1 (Accession NM_000033.2) is a GAM337328 target gene. ABCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337328 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337328 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337328 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337328 DHCR24 CTTTGGCCACGGGGA A A TATGAAT 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is another GAM337328 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337328 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337328 is therefore inhibition of DHCR24, a GAM337328 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337328 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM44.

GAM337329 CNTF TGGAATTGAGTTCCC Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A

TGGGTTT GAM337329 target gene. CNTF BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337329 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337329 is therefore inhibition of CNTF, a GAM337329 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337329 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337330 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337330 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337330 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337330 is therefore inhibition of APP. Accordingly, utilities of GAM337330 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337331 APPBP2 TTGCACTCCAGCCTG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGTAACA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337331 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337331 is therefore inhibition of APPBP2, a GAM337331 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337331 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337331 FHL2 TTGCACTCCAGCCTG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGTAACA another GAM337331 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337331 is therefore inhibition of FHL2, a GAM337331 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337331 IGF1 TTGCACTCCAGCCTG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGTAACA NM_000618.2) is another GAM337331 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337331 is therefore inhibition of IGF1, a GAM337331 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337331 PRND TTGCACTCCAGCCTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGTAACA another GAM337331 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337331 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337331 is therefore inhibition of PRND, a GAM337331 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337331 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337333 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337333 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337333 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337333 is therefore inhibition of APP. Accordingly, utilities of GAM337333 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337334 BACE GAGAGTGCTTTGGGT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

GTAGGCC is a GAM337334 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337334 is therefore inhibition of BACE, a GAM337334 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337334 SLC17A7 GAGAGTGCTTTGGGT SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

GTAGGCC NM_020309.1) is another GAM337334 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337334 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337334 is therefore inhibition of SLC17A7, a GAM337334 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337334 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337336 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337336 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337336 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337336 is therefore inhibition of APP. Accordingly, utilities of GAM337336 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337337 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337337 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337337 is therefore inhibition of APPBP2, a GAM337337 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337337 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337337 target gene. BACE2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337337 is therefore inhibition of BACE2, a GAM337337 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337337 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337337 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337337 is therefore inhibition of FHL2, a GAM337337 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337337 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337337 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337337 is therefore inhibition of IGF1, a GAM337337 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337337 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337337 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337337 is therefore inhibition of MME, a GAM337337 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337337 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337337 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337337 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337337 is therefore inhibition of PRND, a GAM337337 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337337 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337341 APBB2 AGTGGGATGGAGTCA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GCAGAAG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337341 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337341 is therefore inhibition of APBB2, a GAM337341 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337341 GLUL AGTGGGATGGAGTCA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
GCAGAAG NM_002065.3) is another GAM337341 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337341 is therefore inhibition of GLUL, a GAM337341 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337341 IL1A AGTGGGATGGAGTCA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
GCAGAAG GAM337341 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337341 is therefore inhibition of IL1A, a GAM337341 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337341 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337341 NGB AGTGGGATGGAGTCA Neuroglobin (NGB, Accession NM_021257.2) is another GAM337341 A A

GCAGAAG target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337341 is therefore inhibition of NGB, a GAM337341 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337341 PRND AGTGGGATGGAGTCA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GCAGAAG another GAM337341 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337341 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337341 is therefore inhibition of PRND, a GAM337341 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337341 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337343 CNTF AGATGGAGTTGCAGG Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is a A A

TGGTCCT GAM337343 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337343 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337343 is therefore inhibition of CNTF, a GAM337343 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337343 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337344 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337344 target gene. APP
A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337344 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337344 is therefore inhibition of APP. Accordingly, utilities of GAM337344 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337345 APBA1 ACTGCACTCCATCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A
A

GGGGAGC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337345 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337345 is therefore inhibition of APBA1, a GAM337345 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337345 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A

GGGGAGC another GAM337345 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337345 is therefore inhibition of FHL2, a GAM337345 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337345 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGGAGC NM_000618.2) is another GAM337345 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337345 is therefore inhibition of IGF1, a GAM337345 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337345 PLAU ACTGCACTCCATCCT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GGGGAGC is another GAM337345 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337345 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337345 is therefore inhibition of PLAU, a GAM337345 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM282.

GAM337345 PRND ACTGCACTCCATCCT GGGGAGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337345 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337345 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337345 is therefore inhibition of PRND, a GAM337345 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337345 TNF ACTGCACTCCATCCT GGGGAGC Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM337345 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337345 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337345 is therefore inhibition of TNF, a GAM337345 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337345 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337346 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337346 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337346 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337346 is therefore inhibition of APPBP2, a GAM337346 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337346 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337346 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337346 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337346 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337346 is therefore inhibition of BACE2, a GAM337346 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337346 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337346 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337346 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337346 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337346 is therefore inhibition of FHL2, a GAM337346 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337346 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337346 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM337346 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337346 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337346 is therefore inhibition of IGF1, a GAM337346 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337346 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337346 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337346 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337346 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337346 is therefore inhibition of MME, a GAM337346 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337346 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337346 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM337346 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337346 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337346 is therefore inhibition of PRND, a GAM337346 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337346 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337350 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337350 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337350 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337350 is therefore inhibition of APPBP2, a GAM337350 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337350 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337350 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337350 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337350 is therefore inhibition of BACE2, a GAM337350 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337350 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337350 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337350 is therefore inhibition of FHL2, a GAM337350 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337350 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337350 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337350 is therefore inhibition of IGF1, a GAM337350 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337350 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337350 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337350 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337350 is therefore inhibition of

MME, a GAM337350 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337350 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337350 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337350 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337350 is therefore inhibition of PRND, a GAM337350 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337350 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337351 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337351 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337351 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337351 is therefore inhibition of APPBP2, a GAM337351 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337351 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337351 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337351 target gene. BACE2 BINDING SITE is A A

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337351 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337351 is therefore inhibition of BACE2, a GAM337351 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337351 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337351 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337351 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337351 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337351 is therefore inhibition of FHL2, a GAM337351 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337351 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337351 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337351 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337351 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337351 is therefore inhibition of IGF1, a GAM337351 target gene which are structurally and functionally related to insulin but have a much higher growth-

promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337351 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337351 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337351 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337351 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337351 is therefore inhibition of MME, a GAM337351 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337351 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337351 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337351 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337351 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337351 is therefore inhibition of PRND, a GAM337351 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337351 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337352 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337352 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by A A

APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337352 is therefore inhibition of APPBP2, a GAM337352 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337352 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337352 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337352 is therefore inhibition of BACE2, a GAM337352 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337352 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337352 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337352 is therefore inhibition of FHL2, a GAM337352 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer.

Accordingly, utilities of GAM337352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337352 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337352 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337352 is therefore inhibition of IGF1, a GAM337352 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337352 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337352 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337352 is therefore inhibition of MME, a GAM337352 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337352 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337352 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337352 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337352 is therefore inhibition of PRND, a GAM337352 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337352 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337353 PRND TACATGTGCCCAGTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A

GCTGCTG GAM337353 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337353 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337353 is therefore inhibition of PRND, a GAM337353 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337353 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337354 PRND TACATGTGCCCAGTG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A

GCTGCTG GAM337354 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337354 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337354 is therefore inhibition of PRND, a GAM337354 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337354 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337355 APBA1 ACTGCACTCCATCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
GGGGAGC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337355 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337355 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337355 is therefore inhibition of APBA1, a GAM337355 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337355 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337355 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGGAGC another GAM337355 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337355 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337355 is therefore inhibition of FHL2, a GAM337355 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337355 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337355 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGGAGC NM_000618.2) is another GAM337355 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337355 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337355 is therefore inhibition of

IGF1, a GAM337355 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337355 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337355 PLAU ACTGCACTCCATCCT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GGGGAGC is another GAM337355 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337355 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337355 is therefore inhibition of PLAU, a GAM337355 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337355 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337355 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGGAGC another GAM337355 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337355 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337355 is therefore inhibition of PRND, a GAM337355 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337355 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337355 TNF ACTGCACTCCATCCT Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

GGGGAGC Accession NM_000594.2) is another GAM337355 target gene. TNF BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337355 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337355 is therefore inhibition of TNF, a GAM337355 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337355 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337356 HTR2C AGCAGCGCAGGTAGA A A TGGGGCT 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is a GAM337356 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337356 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337356 is therefore inhibition of HTR2C, a GAM337356 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337356 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337356 RAGE AGCAGCGCAGGTAGA A A TGGGGCT Renal Tumor Antigen (RAGE, Accession NM_014226.1) is another GAM337356 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337356 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337356 is therefore inhibition of RAGE, a GAM337356 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM337356 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM337357 APBA1 ACTGCACTCCATCCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

GGGGAGC 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337357 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337357 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337357 is therefore inhibition of APBA1, a GAM337357 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337357 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGGAGC another GAM337357 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337357 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337357 is therefore inhibition of FHL2, a GAM337357 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337357 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGGAGC NM_000618.2) is another GAM337357 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM337357 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337357 is therefore inhibition of IGF1, a GAM337357 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337357 PLAU ACTGCACTCCATCCT Plasminogen Activator, Urokinase (PLAU, Accession NM_002658.1) A A

GGGGAGC is another GAM337357 target gene. PLAU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLAU BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337357 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337357 is therefore inhibition of PLAU, a GAM337357 target gene which is an urokinase plasminogen activator and serine protease . and therefore is associated with Alzheimer. Accordingly, utilities of GAM337357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLAU.The function of PLAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337357 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGGAGC another GAM337357 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337357 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337357 is therefore inhibition of PRND, a GAM337357 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM337357 TNF ACTGCACTCCATCCT GGGGAGC Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, Accession NM_000594.2) is another GAM337357 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337357 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337357 is therefore inhibition of TNF, a GAM337357 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337357 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337358 CAV1 AGGCTTTTGGAGAAG CATATGC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM337358 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337358 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337358 is therefore inhibition of CAV1, a GAM337358 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337358 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337358 HTR2A AGGCTTTTGGAGAAG CATATGC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM337358 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337358 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337358 is therefore inhibition of

HTR2A, a GAM337358 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337358 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337359 CAV1 AGGCTTTTGGAGAAG CATATGC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM337359 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337359 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337359 is therefore inhibition of CAV1, a GAM337359 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337359 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337359 HTR2A AGGCTTTTGGAGAAG CATATGC 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM337359 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337359 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337359 is therefore inhibition of HTR2A, a GAM337359 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337359 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337361 CAV1 GTGGCACCATTGGAG TCTAAGG Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is a GAM337361 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA A A

encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337361 is therefore inhibition of CAV1, a GAM337361 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337361 IGF1 GTGGCACCATTGGAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCTAAGG NM_000618.2) is another GAM337361 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337361 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337361 is therefore inhibition of IGF1, a GAM337361 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337361 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337363 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337363 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337363 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337363 is therefore inhibition of APP. Accordingly, utilities of GAM337363 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337364 APBA1 AGAAGGCTCGCTCTC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A

TCAGGGG 1 (X11) (APBA1, Accession NM_001163.2) is a GAM337364 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337364 is therefore inhibition of APBA1, a GAM337364 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337364 MAPT AGAAGGCTCGCTCTC Microtubule- associated Protein Tau (MAPT, Accession A A

TCAGGGG NM_173727.1) is another GAM337364 target gene. MAPT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337364 is therefore inhibition of MAPT, a GAM337364 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337364 NCSTN AGAAGGCTCGCTCTC NCSTN (Accession NM_015331.1) is another GAM337364 target gene. A A

TCAGGGG NCSTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337364 is therefore inhibition of NCSTN, a GAM337364 target gene which has a central role in

presenilin- mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp-1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337364 PLCD1 AGAAGGCTCGCTCTC Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is A A

TCAGGGG another GAM337364 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337364 is therefore inhibition of PLCD1, a GAM337364 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM337364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM337364 PRND AGAAGGCTCGCTCTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TCAGGGG another GAM337364 target gene. PRND BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337364 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337364 is therefore inhibition of PRND, a GAM337364 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337364 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337366 CTSK ACTGCACTCCATCCT CTSK (Accession NM_000396.2) is a GAM337366 target gene. CTSK A A

GGGACAG BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337366 is therefore inhibition of CTSK. Accordingly, utilities of GAM337366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM337366 FHL2 ACTGCACTCCATCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGACAG another GAM337366 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337366 is therefore inhibition of FHL2, a GAM337366 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337366 IGF1 ACTGCACTCCATCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGACAG NM_000618.2) is another GAM337366 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337366 is therefore inhibition of IGF1, a GAM337366 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337366 PRND ACTGCACTCCATCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGACAG another GAM337366 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337366 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337366 is therefore inhibition of PRND, a GAM337366 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337366 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337367 NGB target A A ACCACAGTGTCACAG AGTCCAT Neuroglobin (NGB, Accession NM_021257.2) is a GAM337367 gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337367 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337367 is therefore inhibition of NGB, a GAM337367 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337367 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337368 NGB target A A ACCACAGTGTCACAG AGTCCAT Neuroglobin (NGB, Accession NM_021257.2) is a GAM337368 gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337368 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337368 is therefore inhibition of NGB, a GAM337368 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337368 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337370 ABCD1 TTGTTGCGGGTGGGG ABCD1 (Accession NM_000033.2) is a GAM337370 target gene. ABCD1 A A

AGAGGAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337370 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337370 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337370 ACHE TTGTTGCGGGTGGGG Acetylcholinesterase (YT blood group) (ACHE, Accession A A

AGAGGAT NM_015831.1) is another GAM337370 target gene. ACHE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337370 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337370 is therefore inhibition of ACHE, a GAM337370 target gene which rapidly hydrolyzes choline released into the synapse. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACHE.The function of ACHE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1191.

GAM337370 OGDH TTGTTGCGGGTGGGG Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession A A

AGAGGAT NM_002541.1) is another GAM337370 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337370 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337370 is therefore inhibition of OGDH, a GAM337370 target gene which helps convert a- ketoglutarate

to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM337370 PRNP TTGTTGCGGGTGGGG AGAGGAT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- Strausler- (PRNP, Accession NM_000311.1) is another GAM337370 target gene. PRNP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337370 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337370 is therefore inhibition of PRNP, a GAM337370 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337370 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM337371 APPBP2 TTGTAAATAACATTT TTTAGCA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337371 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337371 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337371 is therefore inhibition of APPBP2, a GAM337371 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337371 GYPA TTGTAAATAACATTT Glycophorin A (includes MN blood group) (GYPA, Accession A A

TTTAGCA NM_002099.2) is another GAM337371 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337371 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337371 is therefore inhibition of GYPA, a GAM337371 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337371 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337372 ABCD1 TGGAGGCAGGTGCAG ABCD1 (Accession NM_000033.2) is a GAM337372 target gene. ABCD1 A A

ATGGAGG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337372 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337372 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337372 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337372 CRAT TGGAGGCAGGTGCAG Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is A A

ATGGAGG another GAM337372 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337372 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337372 is therefore inhibition of CRAT, a GAM337372 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337372 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337372 DLST TGGAGGCAGGTGCAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

ATGGAGG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM337372 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337372 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337372 is therefore inhibition of DLST, a GAM337372 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337372 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337372 HD TGGAGGCAGGTGCAG HD (Accession NM_002111.3) is another GAM337372 target gene.
HD A A

ATGGAGG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337372 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337372 is therefore inhibition of HD. Accordingly, utilities of GAM337372 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337372 NGB TGGAGGCAGGTGCAG Neuroglobin (NGB, Accession NM_021257.2) is another
GAM337372 A A

ATGGAGG target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337372 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337372 is therefore inhibition of NGB, a GAM337372 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337372 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337373 ABCD1 TGGAGGCAGGTGCAG ABCD1 (Accession NM_000033.2) is a GAM337373 target gene. ABCD1 A A

ATGGAGG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ABCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337373 is therefore inhibition of ABCD1. Accordingly, utilities of GAM337373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ABCD1.

GAM337373 CRAT TGGAGGCAGGTGCAG Carnitine Acetyltransferase (CRAT, Accession NM_004003.2) is A A

ATGGAGG another GAM337373 target gene. CRAT BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CRAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRAT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337373 is therefore inhibition of CRAT, a GAM337373 target gene which catalyzes the reversible transfer of acyl groups from an acyl- CoA thioester to carnitine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRAT.The function of CRAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337373 DLST TGGAGGCAGGTGCAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

ATGGAGG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM337373 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337373 is therefore inhibition of DLST, a GAM337373 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337373 HD TGGAGGCAGGTGCAG HD (Accession NM_002111.3) is another GAM337373 target gene. HD A A

ATGGAGG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337373 is therefore inhibition of HD. Accordingly, utilities of GAM337373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337373 NGB TGGAGGCAGGTGCAG Neuroglobin (NGB, Accession NM_021257.2) is another GAM337373 A A

ATGGAGG target gene. NGB BINDING SITE1 and NGB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NGB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE1 and NGB BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337373 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337373 is therefore inhibition of NGB, a GAM337373 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337373 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337374 IAPP CACTGCTGTAATGGA Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is a A A

CGGTGAG GAM337374 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337374 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337374 is therefore inhibition of IAPP, a GAM337374 target gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337374 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The

function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337375 APLP1 TCCATTGCACTCCAG Amyloid Beta (A4) Precursor- like Protein 1 (APLP1, Accession A A

TCTGGGC NM_005166.2) is a GAM337375 target gene. APLP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APLP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337375 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337375 is therefore inhibition of APLP1, a GAM337375 target gene which is a membrane- associated glycoprotein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APLP1.The function of APLP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM282.

GAM337375 FHL2 TCCATTGCACTCCAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TCTGGGC another GAM337375 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337375 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337375 is therefore inhibition of FHL2, a GAM337375 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337375 FLNB TCCATTGCACTCCAG Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A

TCTGGGC NM_001457.1) is another GAM337375 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337375 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337375 is therefore inhibition of FLNB, a GAM337375 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM337375 IGF1 TCCATTGCACTCCAG TCTGGGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337375 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337375 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337375 is therefore inhibition of IGF1, a GAM337375 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337375 PRND TCCATTGCACTCCAG TCTGGGC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337375 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337375 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337375 is therefore inhibition of PRND, a GAM337375 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337375 PSEN1 TCCATTGCACTCCAG PSEN1 (Accession NM_007318.1) is another GAM337375 target gene. A A

TCTGGGC PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337375 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337375 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337375 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337376 NCKAP1 GTCTTCCAGCCTCCA NCKAP1 (Accession NM_013436.2) is a GAM337376 target gene. A A

TCTTTCT NCKAP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCKAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCKAP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337376 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337376 is therefore inhibition of NCKAP1. Accordingly, utilities of GAM337376 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCKAP1.

GAM337377 APPBP2 CTCTGCCTCCCGGGT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CTAGGCT Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337377 target gene. APPBP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337377 is therefore inhibition of APPBP2, a GAM337377 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337377 BACE CTCTGCCTCCCGGGT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

CTAGGCT is another GAM337377 target gene. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple

transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337377 is therefore inhibition of BACE, a GAM337377 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337377 CASP3 CTCTGCCTCCCGGGT CTAGGCT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is another GAM337377 target gene. CASP3 BINDING SITE1 and CASP3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE1 and CASP3 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337377 is therefore inhibition of CASP3, a GAM337377 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337377 CAV1 CTCTGCCTCCCGGGT CTAGGCT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM337377 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337377 is therefore inhibition of CAV1, a GAM337377 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and

therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337377 MTNR1A CTCTGCCTCCCGGGT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

CTAGGCT another GAM337377 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337377 is therefore inhibition of MTNR1A, a GAM337377 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337377 TFCP2 CTCTGCCTCCCGGGT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A

CTAGGCT another GAM337377 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337377 is therefore inhibition of TFCP2, a GAM337377 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337377 TGFB1 CTCTGCCTCCCGGGT TGFB1 (Accession NM_000660.1) is another GAM337377 target gene. A A

CTAGGCT TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337377 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337377 TRPM2 CTCTGCCTCCCGGGT CTAGGCT TRPM2 (Accession NM_003307.1) is another GAM337377 target gene. A A A A

TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337377 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337377 is therefore inhibition of TRPM2, a GAM337377 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM337377 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337378 APPBP2 CTCTGCCTCCCGGGT CTAGGCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337378 target gene. A A A A APPBP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337378 is therefore inhibition of APPBP2, a GAM337378 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337378 BACE CTCTGCCTCCCGGGT CTAGGCT Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) is another GAM337378 target gene. A A A A BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple

transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337378 is therefore inhibition of BACE, a GAM337378 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337378 CASP3 CTCTGCCTCCCGGGT CTAGGCT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is another GAM337378 target gene. CASP3 BINDING SITE1 and CASP3 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CASP3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE1 and CASP3 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337378 is therefore inhibition of CASP3, a GAM337378 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337378 CAV1 CTCTGCCTCCCGGGT CTAGGCT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession NM_001753.3) is another GAM337378 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337378 is therefore inhibition of CAV1, a GAM337378 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and

therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337378 MTNR1A CTCTGCCTCCCGGGT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is A A

CTAGGCT another GAM337378 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337378 is therefore inhibition of MTNR1A, a GAM337378 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337378 TFCP2 CTCTGCCTCCCGGGT Transcription Factor CP2 (TFCP2, Accession NM_005653.2) is A A

CTAGGCT another GAM337378 target gene. TFCP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TFCP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TFCP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337378 is therefore inhibition of TFCP2, a GAM337378 target gene which is a transcription factor CP2 and recognizes sites within the alpha- globin gene and SV40 late promoters. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TFCP2.The function of TFCP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM760.

GAM337378 TGFB1 CTCTGCCTCCCGGGT TGFB1 (Accession NM_000660.1) is another GAM337378 target gene. A A

CTAGGCT TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337378 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337378 TRPM2 CTCTGCCTCCCGGGT TRPM2 (Accession NM_003307.1) is another GAM337378 target gene. A A

CTAGGCT TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337378 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337378 is therefore inhibition of TRPM2, a GAM337378 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM337378 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337379 CAV1 AACTGCTTTTGTTGT Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A

GCAGGGA NM_001753.3) is a GAM337379 target gene. CAV1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337379 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337379 is therefore inhibition of CAV1, a GAM337379 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337379 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337380 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337380 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337380 is therefore inhibition of APPBP2, a GAM337380 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337380 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM337380 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337380 is therefore inhibition of BACE2, a GAM337380 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337380 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM337380 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337380 is therefore inhibition of FHL2, a GAM337380 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337380 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337380 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337380 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337380 is therefore inhibition of HD. Accordingly, utilities of GAM337380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337380 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337380 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337380 is therefore inhibition of IGF1, a GAM337380 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337380 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337380 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337380 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337380 is therefore inhibition of PRND, a GAM337380 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337380 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337383 IGF1 GTGTCACTTTCAGGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GCTCTAA NM_000618.2) is a GAM337383 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337383 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337383 is therefore inhibition of IGF1, a GAM337383 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337383 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337384 CAV1 GAGGAGGGCTTTCCC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A

TGACTTT NM_001753.3) is a GAM337384 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337384 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337384 is therefore inhibition of CAV1, a GAM337384 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337384 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337385 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337385 target

gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337385 is therefore inhibition of APPBP2, a GAM337385 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337385 BACE2 ACTGCACTCCAGCCT A A GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337385 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337385 is therefore inhibition of BACE2, a GAM337385 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337385 FHL2 ACTGCACTCCAGCCT A A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337385 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337385 is therefore inhibition of

FHL2, a GAM337385 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337385 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337385 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337385 is therefore inhibition of IGF1, a GAM337385 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337385 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337385 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337385 is therefore inhibition of MME, a GAM337385 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337385 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337385 target gene. PRND BINDING SITE1 through PRND

BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337385 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337385 is therefore inhibition of PRND, a GAM337385 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337385 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337386 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337386 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337386 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337386 is therefore inhibition of APPBP2, a GAM337386 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337386 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337386 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337386 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337386 is therefore inhibition of BACE2, a GAM337386 target gene which cleaves intracellularly the b-

secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337386 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337386 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337386 is therefore inhibition of FHL2, a GAM337386 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337386 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337386 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337386 is therefore inhibition of IGF1, a GAM337386 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337386 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337386

target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337386 is therefore inhibition of MME, a GAM337386 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337386 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM337386 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337386 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337386 is therefore inhibition of PRND, a GAM337386 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337386 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337387 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337387 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337387 is therefore inhibition of APPBP2, a GAM337387 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM337387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337387 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337387 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337387 is therefore inhibition of BACE2, a GAM337387 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337387 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337387 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337387 is therefore inhibition of FHL2, a GAM337387 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337387 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337387 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337387 is therefore inhibition of IGF1, a GAM337387 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337387 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A
A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337387 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337387 is therefore inhibition of MME, a GAM337387 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337387 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337387 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
A
GGGCAAC another GAM337387 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337387 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337387 is therefore inhibition of PRND, a GAM337387 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337387 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337388 APBB2 GAATAATGTCCCACT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GGGAGGC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337388 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337388 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337388 is therefore inhibition of APBB2, a GAM337388 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337388 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337388 IGF1 GAATAATGTCCCACT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGAGGC NM_000618.2) is another GAM337388 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337388 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337388 is therefore inhibition of IGF1, a GAM337388 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337388 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337389 APBB2 GAATAATGTCCCACT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GGGAGGC 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337389 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337389 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337389 is therefore inhibition of APBB2, a GAM337389 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337389 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337389 IGF1 GAATAATGTCCCACT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGAGGC NM_000618.2) is another GAM337389 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337389 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337389 is therefore inhibition of IGF1, a GAM337389 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337389 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337390 SNCB TGAGGACAGAAAGTT Synuclein, Beta (SNCB, Accession NM_003085.2) is a GAM337390 A A
TGTGCTG target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337390 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337390 is therefore inhibition of SNCB, a GAM337390 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337390 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases

and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337391 SNCB TGAGGACAGAAAGTT TGTGCTG Synuclein, Beta (SNCB, Accession NM_003085.2) is a GAM337391 target gene. SNCB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNCB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SNCB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337391 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337391 is therefore inhibition of SNCB, a GAM337391 target gene which may inhibit phospholipase D2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337391 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SNCB.The function of SNCB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337393 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337393 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337393 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337393 is therefore inhibition of APPBP2, a GAM337393 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337393 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337393 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337393 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337393 is therefore inhibition of BACE2, a GAM337393 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337393 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337393 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337393 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337393 is therefore inhibition of FHL2, a GAM337393 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337393 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337393 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337393 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337393 is therefore inhibition of HD. Accordingly, utilities of GAM337393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337393 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337393 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337393 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337393 is therefore inhibition of IGF1, a GAM337393 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337393 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM337393 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337393 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337393 is therefore inhibition of PRND, a GAM337393 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337393 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337394 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337394 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337394 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337394 is therefore inhibition of APPBP2, a GAM337394 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337394 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337394 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337394 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337394 is therefore inhibition of BACE2, a GAM337394 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337394 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337394 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337394 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337394 is therefore inhibition of FHL2, a GAM337394 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337394 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337394 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337394

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337394 is therefore inhibition of HD. Accordingly, utilities of GAM337394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337394 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TGGGCAA NM_000618.2) is another GAM337394 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337394 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337394 is therefore inhibition of IGF1, a GAM337394 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337394 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM337394 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337394 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337394 is therefore inhibition of PRND, a GAM337394 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337394 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337395 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337395 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337395 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337395 is therefore inhibition of APPBP2, a GAM337395 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337395 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337395 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337395 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337395 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337395 is therefore inhibition of BACE2, a GAM337395 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337395 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337395 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337395 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337395 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337395 is therefore inhibition of FHL2, a GAM337395 target gene which Contains four LIM domains and an

additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337395 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337395 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337395 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337395 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337395 is therefore inhibition of IGF1, a GAM337395 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337395 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337395 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337395 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337395 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337395 is therefore inhibition of MME, a GAM337395 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337395 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337395 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337395 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337395 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337395 is therefore inhibition of PRND, a GAM337395 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337395 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337396 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337396 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337396 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337396 is therefore inhibition of APPBP2, a GAM337396 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337396 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337396 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337396 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337396 is therefore inhibition of BACE2, a GAM337396 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is

associated with Alzheimer. Accordingly, utilities of GAM337396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337396 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337396 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337396 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337396 is therefore inhibition of FHL2, a GAM337396 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337396 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337396 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337396 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337396 is therefore inhibition of IGF1, a GAM337396 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337396 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337396 target gene. MME BINDING SITE is a target binding site found in the

5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337396 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337396 is therefore inhibition of MME, a GAM337396 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337396 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337396 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337396 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337396 is therefore inhibition of PRND, a GAM337396 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337396 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337397 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337397 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337397 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337397 is therefore inhibition of APPBP2, a GAM337397 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337397 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337397 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337397 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337397 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337397 is therefore inhibition of BACE2, a GAM337397 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337397 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337397 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337397 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337397 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337397 is therefore inhibition of FHL2, a GAM337397 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337397 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337397 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337397 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337397 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337397 is therefore inhibition of IGF1, a GAM337397 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337397 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337397 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337397 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337397 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337397 is therefore inhibition of MME, a GAM337397 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337397 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337397 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337397 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337397 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337397 is therefore inhibition of PRND, a GAM337397 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337397 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337399 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337399 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337399 is therefore inhibition of APPBP2, a GAM337399 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337399 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337399 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337399 is therefore inhibition of BACE2, a GAM337399 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337399 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337399 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337399 is therefore inhibition of FHL2, a GAM337399 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337399 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337399 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337399 is therefore inhibition of IGF1, a GAM337399 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337399 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337399 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337399 is therefore inhibition of MME, a GAM337399 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated

with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337399 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337399 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337399 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337399 is therefore inhibition of PRND, a GAM337399 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337399 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337400 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337400 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337400 is therefore inhibition of APPBP2, a GAM337400 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337400 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337400 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337400 is therefore inhibition of BACE2, a GAM337400 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337400 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337400 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337400 is therefore inhibition of FHL2, a GAM337400 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337400 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337400 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337400 is therefore inhibition of IGF1, a GAM337400 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337400 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337400 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337400 is therefore inhibition of MME, a GAM337400 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337400 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337400 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337400 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337400 is therefore inhibition of PRND, a GAM337400 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337400 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337401 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337401 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of

GAM337401 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337401 is therefore inhibition of APPBP2, a GAM337401 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337401 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337401 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337401 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337401 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337401 is therefore inhibition of BACE2, a GAM337401 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337401 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337401 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337401 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337401 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337401 is therefore inhibition of FHL2, a GAM337401 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337401 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM189.

GAM337401 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337401 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337401 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337401 is therefore inhibition of IGF1, a GAM337401 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337401 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337401 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337401 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337401 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337401 is therefore inhibition of MME, a GAM337401 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337401 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337401 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337401 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337401 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337401 is therefore inhibition of PRND, a GAM337401 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337401 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337402 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337402 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337402 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337402 is therefore inhibition of APPBP2, a GAM337402 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337402 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337402 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337402 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337402 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337402 is therefore inhibition of BACE2, a GAM337402 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337402 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM189.

GAM337402 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337402 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337402 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337402 is therefore inhibition of FHL2, a GAM337402 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337402 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337402 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337402 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337402 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337402 is therefore inhibition of IGF1, a GAM337402 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337402 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337402 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337402 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337402 RNA are set forth in Tables 6 and

7, hereby incorporated herein.

Another function of GAM337402 is therefore inhibition of MME, a GAM337402 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337402 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337402 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337402 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337402 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337402 is therefore inhibition of PRND, a GAM337402 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337402 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337403 PRND GTACACATTTTCATG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A
TTACCAT GAM337403 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337403 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337403 is therefore inhibition of PRND, a GAM337403 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337403 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337405 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337405 target

gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337405 is therefore inhibition of APPBP2, a GAM337405 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337405 BACE2 ACTGCACTCCAGCCT A A GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337405 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337405 is therefore inhibition of BACE2, a GAM337405 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337405 FHL2 ACTGCACTCCAGCCT A A GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337405 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337405 is therefore inhibition of

FHL2, a GAM337405 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337405 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337405 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337405 is therefore inhibition of IGF1, a GAM337405 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337405 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337405 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337405 is therefore inhibition of MME, a GAM337405 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337405 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337405 target gene. PRND BINDING SITE1 through PRND

BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337405 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337405 is therefore inhibition of PRND, a GAM337405 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337405 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337407 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337407 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337407 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337407 is therefore inhibition of APP. Accordingly, utilities of GAM337407 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337408 LRP1 ATCTCATAGGCCCCC Low Density Lipoprotein- related Protein 1 (alpha- 2- A A

AGTGGGG macroglobulin recep (LRP1, Accession NM_002332.1) is a GAM337408 target gene. LRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337408 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337408 is therefore inhibition of LRP1, a GAM337408 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337408 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337409 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337409 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337409 is therefore inhibition of APPBP2, a GAM337409 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337409 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337409 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337409 is therefore inhibition of BACE2, a GAM337409 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337409 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337409 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337409 is therefore inhibition of FHL2, a GAM337409 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337409 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337409 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337409 is therefore inhibition of IGF1, a GAM337409 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337409 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337409 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337409 is therefore inhibition of MME, a GAM337409 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337409 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337409 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337409 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337409 is therefore inhibition of PRND, a GAM337409 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337409 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337410 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337410 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337410 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337410 is therefore inhibition of APPBP2, a GAM337410 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337410 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337410 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337410 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337410 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337410 is therefore inhibition of

BACE2, a GAM337410 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337410 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337410 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337410 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337410 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337410 is therefore inhibition of FHL2, a GAM337410 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337410 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337410 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337410 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337410 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337410 is therefore inhibition of IGF1, a GAM337410 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337410 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337410 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337410 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337410 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337410 is therefore inhibition of MME, a GAM337410 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337410 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337410 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337410 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337410 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337410 is therefore inhibition of PRND, a GAM337410 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337410 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337411 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337411 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337411 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337411 is therefore inhibition of APPBP2, a GAM337411 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337411 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337411 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337411 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337411 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337411 is therefore inhibition of BACE2, a GAM337411 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337411 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337411 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337411 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337411 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337411 is therefore inhibition of FHL2, a GAM337411 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337411 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337411 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337411 target gene. IGF1 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337411 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337411 is therefore inhibition of IGF1, a GAM337411 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337411 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337411 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337411 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337411 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337411 is therefore inhibition of MME, a GAM337411 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337411 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337411 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337411 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337411 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337411 is therefore inhibition of PRND, a GAM337411 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM337411 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337413 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337413 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337413 is therefore inhibition of APPBP2, a GAM337413 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337413 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337413 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337413 is therefore inhibition of BACE2, a GAM337413 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337413 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337413 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337413 is therefore inhibition of FHL2, a GAM337413 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337413 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337413 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337413 is therefore inhibition of IGF1, a GAM337413 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337413 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337413 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337413 is therefore inhibition of MME, a GAM337413 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities

of GAM337413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337413 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337413 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337413 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337413 is therefore inhibition of PRND, a GAM337413 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337413 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337414 ADAM17 AAGTGCTGGGATTAC A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

AGGCCTG factor, (ADAM17, Accession NM_021832.1) is a GAM337414 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337414 is therefore inhibition of ADAM17, a GAM337414 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337414 GFAP AAGTGCTGGGATTAC GFAP (Accession NM_002055.2) is another GAM337414 target gene. A A

AGGCCTG GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337414 is therefore inhibition of GFAP. Accordingly, utilities of GAM337414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337414 HTR2A AAGTGCTGGGATTAC A A AGGCCTG 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is another GAM337414 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337414 is therefore inhibition of HTR2A, a GAM337414 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337414 IAPP AAGTGCTGGGATTAC A A AGGCCTG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is another GAM337414 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337414 is therefore inhibition of IAPP, a GAM337414 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337414 MTNR1A AAGTGCTGGGATTAC A A AGGCCTG Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is another GAM337414 target gene. MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2 are target binding sites found in untranslated regions

of mRNA encoded by MTNR1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE1 and MTNR1A BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337414 is therefore inhibition of MTNR1A, a GAM337414 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337414 TGFB1 AAGTGCTGGGATTAC TGFB1 (Accession NM_000660.1) is another GAM337414 target gene. A A

AGGCCTG TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337414 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337414 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337414 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337415 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337415 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337415 is therefore inhibition of APPBP2, a GAM337415 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described

hereinabove with reference to GAM44.

GAM337415 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337415 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337415 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337415 is therefore inhibition of BACE2, a GAM337415 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337415 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337415 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337415 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337415 is therefore inhibition of FHL2, a GAM337415 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337415 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337415 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337415 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337415 is therefore inhibition of IGF1, a GAM337415 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337415 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337415 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337415 is therefore inhibition of MME, a GAM337415 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337415 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337415 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337415 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337415 is therefore inhibition of PRND, a GAM337415 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337415 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337416 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337416 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337416 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337416 is therefore inhibition of APPBP2, a GAM337416 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337416 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337416 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337416 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337416 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337416 is therefore inhibition of BACE2, a GAM337416 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337416 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337416 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337416 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337416 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337416 is therefore inhibition of FHL2, a GAM337416 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337416 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337416 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337416 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337416 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337416 is therefore inhibition of IGF1, a GAM337416 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337416 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337416 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337416 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337416 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337416 is therefore inhibition of MME, a GAM337416 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337416 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337416 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337416 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337416 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337416 is therefore inhibition of PRND, a GAM337416 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337416 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337417 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337417 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337417 is therefore inhibition of APPBP2, a GAM337417 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337417 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337417 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337417 is therefore inhibition of

BACE2, a GAM337417 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337417 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337417 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337417 is therefore inhibition of FHL2, a GAM337417 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337417 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337417 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337417 is therefore inhibition of IGF1, a GAM337417 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337417 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337417 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337417 is therefore inhibition of MME, a GAM337417 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337417 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337417 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337417 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337417 is therefore inhibition of PRND, a GAM337417 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337417 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337418 ACE GAGTGAGTGTGATCT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

TGGCTCA (ACE, Accession NM_152831.1) is a GAM337418 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337418 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337418 is therefore inhibition of ACE, a GAM337418 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337418 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337418 APBA1 GAGTGAGTGTGATCT Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A
TGGCTCA 1 (X11) (APBA1, Accession NM_001163.2) is another GAM337418 target gene. APBA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337418 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337418 is therefore inhibition of APBA1, a GAM337418 target gene which stabilises APP and inhibits production of proteolytic APP fragments. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337418 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA1.The function of APBA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337418 HTR2A GAGTGAGTGTGATCT 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
TGGCTCA NM_000621.1) is another GAM337418 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337418 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337418 is therefore inhibition of HTR2A, a GAM337418 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337418 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337419 APPBP2 AGTAGAACAGAATAT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TTTAGCT Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337419 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337419 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337419 is therefore inhibition of APPBP2, a GAM337419 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337419 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337420 PRND CTGGAGGATAACAAT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A
GATAATG GAM337420 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337420 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337420 is therefore inhibition of PRND, a GAM337420 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337420 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337421 MPO AACACGTAGTAGGTG Myeloperoxidase (MPO, Accession NM_000250.1) is a GAM337421 A A
TTCGATA target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337421 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337421 is therefore inhibition of MPO, a GAM337421 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337421 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM337424 APPBP2 ACTGCACTCTAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337424 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337424 is therefore inhibition of APPBP2, a GAM337424 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337424 FHL2 ACTGCACTCTAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337424 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337424 is therefore inhibition of FHL2, a GAM337424 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337424 IGF1 ACTGCACTCTAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337424 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337424 is therefore inhibition of IGF1, a GAM337424 target gene which are structurally and

functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337424 PRND ACTGCACTCTAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337424 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337424 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337424 is therefore inhibition of PRND, a GAM337424 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337424 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337425 APPBP2 ACTGCACTCTAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337425 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337425 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337425 is therefore inhibition of APPBP2, a GAM337425 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337425 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337425 FHL2 ACTGCACTCTAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337425 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337425 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337425 is therefore inhibition of FHL2, a GAM337425 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337425 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337425 IGF1 ACTGCACTCTAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337425 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337425 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337425 is therefore inhibition of IGF1, a GAM337425 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337425 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337425 PRND ACTGCACTCTAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337425 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337425 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337425 is therefore inhibition of PRND, a GAM337425 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337425 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337426 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337426 target gene. APP
A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337426 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337426 is therefore inhibition of APP. Accordingly, utilities of GAM337426 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337428 FHL2 TGTGCCACTGCACTC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A
CATGGGT a GAM337428 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337428 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337428 is therefore inhibition of FHL2, a GAM337428 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337428 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337428 IAPP TGTGCCACTGCACTC Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A
A
CATGGGT another GAM337428 target gene. IAPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337428 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337428 is therefore inhibition of IAPP, a GAM337428 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337428

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337428 IGF1 TGTGCCACTGCACTC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CATGGGT NM_000618.2) is another GAM337428 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337428 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337428 is therefore inhibition of IGF1, a GAM337428 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337428 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337428 PRND TGTGCCACTGCACTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
CATGGGT another GAM337428 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337428 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337428 is therefore inhibition of PRND, a GAM337428 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337428 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337429 HTR2C TTCCAGTTTTTCCTA 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession A A
CCCCTTA NM_000868.1) is a GAM337429 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337429 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337429 is therefore inhibition of HTR2C, a GAM337429 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337429 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337430 DHCR24 TGATGGAGGAAATGG A A TGGTATC 24- dehydrocholesterol Reductase (DHCR24, Accession NM_014762.1) is a GAM337430 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337430 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337430 is therefore inhibition of DHCR24, a GAM337430 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337430 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337430 MME TGATGGAGGAAATGG A A TGGTATC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007288.1) is another GAM337430 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337430 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337430 is therefore inhibition of MME, a GAM337430 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337430 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous

studies, as described hereinabove with reference to GAM25.

GAM337431 DHCR24 TGATGGAGGAAATGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGGTATC NM_014762.1) is a GAM337431 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337431 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337431 is therefore inhibition of DHCR24, a GAM337431 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337431 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337431 MME TGATGGAGGAAATGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGGTATC enkephalinase, (MME, Accession NM_007288.1) is another GAM337431 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337431 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337431 is therefore inhibition of MME, a GAM337431 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337431 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337432 DHCR24 TGATGGAGGAAATGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGGTATC NM_014762.1) is a GAM337432 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337432 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337432 is therefore inhibition of DHCR24,

a GAM337432 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337432 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337432 MME TGATGGAGGAAATGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGGTATC enkephalinase, (MME, Accession NM_007288.1) is another GAM337432 target gene. MME BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337432 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337432 is therefore inhibition of MME, a GAM337432 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337432 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337433 DHCR24 TGATGGAGGAAATGG 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGGTATC NM_014762.1) is a GAM337433 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337433 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337433 is therefore inhibition of DHCR24, a GAM337433 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337433 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337433 MME TGATGGAGGAAATGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGGTATC enkephalinase, (MME, Accession NM_007288.1) is another GAM337433 target gene. MME BINDING SITE is a target binding site found in the

3` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337433 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337433 is therefore inhibition of MME, a GAM337433 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337433 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337435 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337435 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337435 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337435 is therefore inhibition of APP. Accordingly, utilities of GAM337435 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337437 ACE TGTGTACTTGTCTTA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
GTTTGCT (ACE, Accession NM_152831.1) is a GAM337437 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337437 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337437 is therefore inhibition of ACE, a GAM337437 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337437 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337437 IL1A TGTGTACTTGTCTTA Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
GTTTGCT GAM337437 target gene. IL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL1A,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337437 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337437 is therefore inhibition of IL1A, a GAM337437 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337437 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337437 OLR1 TGTGTACTTGTCTTA GTTTGCT Oxidised Low Density Lipoprotein (lectin- like) Receptor 1 A A

(OLR1, Accession NM_002543.1) is another GAM337437 target gene. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OLR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337437 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337437 is therefore inhibition of OLR1, a GAM337437 target gene which is involved in degradation of oxidized LDL by vascular endothelial cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337437 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OLR1.The function of OLR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337438 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337438 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337438 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337438 is therefore inhibition of APPBP2, a GAM337438 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337438 include

diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337438 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337438 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337438 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337438 is therefore inhibition of BACE2, a GAM337438 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337438 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337438 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337438 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337438 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337438 is therefore inhibition of FHL2, a GAM337438 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337438 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337438 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337438 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337438 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337438 is therefore inhibition of IGF1, a GAM337438 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337438 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337438 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337438 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337438 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337438 is therefore inhibition of MME, a GAM337438 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337438 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337438 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337438 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337438 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337438 is therefore inhibition of PRND, a GAM337438 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337438 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions

associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337439 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337439 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337439 is therefore inhibition of APPBP2, a GAM337439 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337439 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337439 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337439 is therefore inhibition of BACE2, a GAM337439 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337439 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337439 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337439 is therefore inhibition of FHL2, a GAM337439 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337439 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337439 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337439 is therefore inhibition of IGF1, a GAM337439 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337439 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337439 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337439 is therefore inhibition of MME, a GAM337439 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated

with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337439 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337439 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337439 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337439 is therefore inhibition of PRND, a GAM337439 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337439 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337440 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337440 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337440 is therefore inhibition of APPBP2, a GAM337440 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337440 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337440 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337440 is therefore inhibition of BACE2, a GAM337440 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337440 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337440 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337440 is therefore inhibition of FHL2, a GAM337440 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337440 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337440 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337440 is therefore inhibition of IGF1, a GAM337440 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337440 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337440 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337440 is therefore inhibition of MME, a GAM337440 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337440 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337440 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337440 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337440 is therefore inhibition of PRND, a GAM337440 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337440 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337441 HD TCCCTCTGCCTGCAG HD (Accession NM_002111.3) is a GAM337441 target gene. HD A A

TCCTGCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337441 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337441 is therefore inhibition of HD. Accordingly, utilities of GAM337441 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337441 LRP1 TCCCTCTGCCTGCAG Low Density Lipoprotein- related Protein 1 (alpha- 2- A A
TCCTGCT macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337441 target gene. LRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337441 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337441 is therefore inhibition of LRP1, a GAM337441 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337441 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337441 MAPT TCCCTCTGCCTGCAG Microtubule- associated Protein Tau (MAPT, Accession A A
TCCTGCT NM_016835.1) is another GAM337441 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337441 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337441 is therefore inhibition of MAPT, a GAM337441 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337441 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337442 HD TCCCTCTGCCTGCAG HD (Accession NM_002111.3) is a GAM337442 target gene. HD A A
TCCTGCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337442

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337442 is therefore inhibition of HD. Accordingly, utilities of GAM337442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337442 LRP1 TCCCTCTGCCTGCAG TCCTGCT Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337442 target gene. LRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337442 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337442 is therefore inhibition of LRP1, a GAM337442 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337442 MAPT TCCCTCTGCCTGCAG TCCTGCT Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM337442 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337442 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337442 is therefore inhibition of MAPT, a GAM337442 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337442 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337443 HD TCCCTCTGCCTGCAG TCCTGCT HD (Accession NM_002111.3) is a GAM337443 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of A A

Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337443 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337443 is therefore inhibition of HD. Accordingly, utilities of GAM337443 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337443 LRP1 TCCCTCTGCCTGCAG TCCTGCT Low Density Lipoprotein- related Protein 1 (alpha- 2- macroglobulin recep (LRP1, Accession NM_002332.1) is another GAM337443 target gene. LRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of LRP1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337443 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337443 is therefore inhibition of LRP1, a GAM337443 target gene which is a recycling lipoprotein receptor with possible growth- modulating effects. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337443 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with LRP1.The function of LRP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1975.

GAM337443 MAPT TCCCTCTGCCTGCAG TCCTGCT Microtubule- associated Protein Tau (MAPT, Accession NM_016835.1) is another GAM337443 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337443 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337443 is therefore inhibition of MAPT, a GAM337443 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337443 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337445 BLMH CTGGCTGCATTTAGG AACAAGG Bleomycin Hydrolase (BLMH, Accession NM_000386.1) is a GAM337445 target gene. BLMH BINDING SITE is a target binding site A A

found in the 3` untranslated region of mRNA encoded by BLMH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BLMH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337445 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337445 is therefore inhibition of BLMH, a GAM337445 target gene which is a cysteine protease that inactivates bleomycin and therefore is associated with Alzheimer. Accordingly, utilities of GAM337445 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BLMH.The function of BLMH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM828.

GAM337445 DLST CTGGCTGCATTTAGG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A
AACAAGG oxo- glutarat (DLST, Accession NM_001933.2) is another GAM337445 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337445 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337445 is therefore inhibition of DLST, a GAM337445 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337445 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337445 SLC17A7 CTGGCTGCATTTAGG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A
AACAAGG NM_020309.1) is another GAM337445 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337445 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337445 is therefore inhibition of SLC17A7, a GAM337445 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337445 include diagnosis, prevention and treatment of Alzheimer, and of

other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM354.

GAM337446 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337446 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337446 is therefore inhibition of APPBP2, a GAM337446 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337446 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337446 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337446 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337446 is therefore inhibition of BACE2, a GAM337446 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337446 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337446 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as A A

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337446 is therefore inhibition of FHL2, a GAM337446 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337446 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337446 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337446 is therefore inhibition of IGF1, a GAM337446 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337446 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337446 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337446 is therefore inhibition of MME, a GAM337446 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337446 include diagnosis, prevention and treatment of

Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337446 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337446 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337446 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337446 is therefore inhibition of PRND, a GAM337446 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337446 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337447 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337447 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337447 is therefore inhibition of APPBP2, a GAM337447 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337447 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337447 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337447 is therefore inhibition of BACE2, a GAM337447 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337447 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337447 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337447 is therefore inhibition of FHL2, a GAM337447 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337447 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337447 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337447 is therefore inhibition of IGF1, a GAM337447 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337447 MME ACTGCACTCCAGCCT GGGCAAC A A

Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337447 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337447 is therefore inhibition of MME, a GAM337447 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337447 PRND ACTGCACTCCAGCCT GGGCAAC A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337447 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337447 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337447 is therefore inhibition of PRND, a GAM337447 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337447 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337448 APPBP2 ACTGCACTCCAGCCT GGGCAAC A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337448 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and

secondary structure complementarity to the nucleotide sequence of GAM337448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337448 is therefore inhibition of APPBP2, a GAM337448 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337448 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337448 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337448 is therefore inhibition of BACE2, a GAM337448 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337448 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337448 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337448 is therefore inhibition of FHL2, a GAM337448 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337448 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337448 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337448 is therefore inhibition of IGF1, a GAM337448 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337448 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337448 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337448 is therefore inhibition of MME, a GAM337448 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337448 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337448 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide

sequence of GAM337448 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337448 is therefore inhibition of PRND, a GAM337448 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337448 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337449 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337449 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337449 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337449 is therefore inhibition of APP. Accordingly, utilities of GAM337449 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337450 CASP3 ATAAAGCTAGACGTT Caspase 3, Apoptosis- related Cysteine Protease (CASP3, A A

CATTGAC Accession NM_032991.1) is a GAM337450 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337450 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337450 is therefore inhibition of CASP3, a GAM337450 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337450 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337452 TNFRSF6 TTTGGCTGTTTGTCT TNFRSF6 (Accession NM_152872.1) is a GAM337452 target gene. A A

TGGGCAA TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of TNFRSF6 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337452 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337452 is therefore inhibition of TNFRSF6. Accordingly, utilities of GAM337452 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF6.

GAM337453 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337453 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337453 is therefore inhibition of APPBP2, a GAM337453 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337453 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337453 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337453 is therefore inhibition of BACE2, a GAM337453 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337453 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337453 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337453 is therefore inhibition of FHL2, a GAM337453 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337453 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337453 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337453 is therefore inhibition of HD. Accordingly, utilities of GAM337453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337453 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM337453 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337453 is therefore inhibition of IGF1, a GAM337453 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337453 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337453 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337453 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337453 is therefore inhibition of PRND, a GAM337453 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337453 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337454 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337454 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337454 is therefore inhibition of APPBP2, a GAM337454 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337454 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337454 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337454 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337454 is therefore inhibition of BACE2, a GAM337454 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337454 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337454 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337454 is therefore inhibition of FHL2, a GAM337454 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337454 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337454 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337454 is therefore inhibition of HD. Accordingly, utilities of GAM337454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337454 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337454 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337454 is therefore inhibition of IGF1, a GAM337454 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337454 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM337454 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337454 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337454 is therefore inhibition of PRND, a GAM337454 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337454 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337456 APPBP2 CACTGCACTCCACCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337456 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337456 is therefore inhibition of APPBP2, a GAM337456 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337456 include diagnosis, prevention and treatment of Alzheimer, and of other

diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337456 BACE2 CACTGCACTCCACCC TGGGCAA A A Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM337456 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337456 is therefore inhibition of BACE2, a GAM337456 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337456 FHL2 CACTGCACTCCACCC TGGGCAA A A Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337456 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337456 is therefore inhibition of FHL2, a GAM337456 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337456 IGF1 CACTGCACTCCACCC TGGGCAA A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337456 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM337456 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337456 is therefore inhibition of IGF1, a GAM337456 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337456 PRND CACTGCACTCCACCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337456 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337456 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337456 is therefore inhibition of PRND, a GAM337456 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337456 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337457 APPBP2 CACTGCACTCCACCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337457 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337457 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337457 is therefore inhibition of APPBP2, a GAM337457 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337457 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337457 BACE2 CACTGCACTCCACCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138991.1) is another GAM337457 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337457 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337457 is therefore inhibition of BACE2, a GAM337457 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337457 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337457 FHL2 CACTGCACTCCACCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337457 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337457 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337457 is therefore inhibition of FHL2, a GAM337457 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337457 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337457 IGF1 CACTGCACTCCACCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337457 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337457 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337457 is therefore inhibition of IGF1, a GAM337457 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337457 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337457 PRND CACTGCACTCCACCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM337457 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337457 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337457 is therefore inhibition of PRND, a GAM337457 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337457 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337458 ADAMTS5 CTGGTGAGGAAGGAG A Disintegrin- like and Metalloprotease (reprolysin type) with A A
CAGAGTT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM337458 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337458 is therefore inhibition of ADAMTS5, a GAM337458 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337458 HD CTGGTGAGGAAGGAG HD (Accession NM_002111.3) is another GAM337458 target gene.
HD A A

CAGAGTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337458 is therefore inhibition of HD. Accordingly, utilities of GAM337458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337458 MPO CTGGTGAGGAAGGAG Myeloperoxidase (MPO, Accession NM_000250.1) is another
A A

CAGAGTT GAM337458 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337458 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337458 is therefore inhibition of MPO, a GAM337458 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337458 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM337459 ADAMTS5 CTGGTGAGGAAGGAG A Disintegrin- like and Metalloprotease (reprolysin type) with A
A

CAGAGTT Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM337459 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337459 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337459 is therefore inhibition of ADAMTS5, a GAM337459 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and

clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337459 HD CTGGTGAGGAAGGAG HD (Accession NM_002111.3) is another GAM337459 target gene.
HD A A

CAGAGTT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337459 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337459 is therefore inhibition of HD. Accordingly, utilities of GAM337459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337459 MPO CTGGTGAGGAAGGAG Myeloperoxidase (MPO, Accession NM_000250.1) is another
A A

CAGAGTT GAM337459 target gene. MPO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MPO BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337459 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337459 is therefore inhibition of MPO, a GAM337459 target gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337459 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MPO.The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM337460 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A

GGGTGAC a GAM337460 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337460 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337460 is therefore inhibition of FHL2, a GAM337460 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337460 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337460 IGF1 ACTGCACTCCAGCCT GGGTGAC A A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337460 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337460 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337460 is therefore inhibition of IGF1, a GAM337460 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337460 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337460 PRND ACTGCACTCCAGCCT GGGTGAC A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337460 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337460 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337460 is therefore inhibition of PRND, a GAM337460 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337460 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337461 APPBP2 AATCCCAGCTACTCG GGAGGCT A A Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337461 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337461 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM337461 is therefore inhibition of APPBP2, a GAM337461 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337461 CTSB AATCCCAGCTACTCG CTSB (Accession NM_147782.1) is another GAM337461 target gene. A A

GGAGGCT CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337461 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337461 is therefore inhibition of CTSB. Accordingly, utilities of GAM337461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM337461 FHL2 AATCCCAGCTACTCG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGAGGCT another GAM337461 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337461 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337461 is therefore inhibition of FHL2, a GAM337461 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337461 GFAP AATCCCAGCTACTCG GFAP (Accession NM_002055.2) is another GAM337461 target gene. A A

GGAGGCT GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING

SITE, and secondary structure complementarity to the nucleotide sequence of GAM337461 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337461 is therefore inhibition of GFAP. Accordingly, utilities of GAM337461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337461 IGF1 AATCCCAGCTACTCG GGAGGCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337461 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337461 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337461 is therefore inhibition of IGF1, a GAM337461 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337461 PRND AATCCCAGCTACTCG GGAGGCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337461 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337461 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337461 is therefore inhibition of PRND, a GAM337461 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337461 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337462 APPBP2 GCCATTGCACTCCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CCTGGGC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337462 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337462 is therefore inhibition of APPBP2, a GAM337462 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337462 CTSB GCCATTGCACTCCAG CTSB (Accession NM_147780.1) is another GAM337462 target gene. A A

CCTGGGC CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337462 is therefore inhibition of CTSB. Accordingly, utilities of GAM337462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM337462 FHL2 GCCATTGCACTCCAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CCTGGGC another GAM337462 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337462 is therefore inhibition of FHL2, a GAM337462 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM189.

GAM337462 IGF1 GCCATTGCACTCCAG Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
CCTGGGC NM_000618.2) is another GAM337462 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337462 is therefore inhibition of IGF1, a GAM337462 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337462 PRND GCCATTGCACTCCAG Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
CCTGGGC another GAM337462 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337462 is therefore inhibition of PRND, a GAM337462 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337462 PSEN2 GCCATTGCACTCCAG PSEN2 (Accession NM_000447.1) is another GAM337462 target gene. A A
CCTGGGC PSEN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337462 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337462 is therefore inhibition of PSEN2. Accordingly, utilities of GAM337462 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN2.

GAM337463 APPBP2 TGGAAGAATAGGCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TATTGGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337463 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337463 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337463 is therefore inhibition of APPBP2, a GAM337463 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337463 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337463 CTSK TGGAAGAATAGGCAG CTSK (Accession NM_000396.2) is another GAM337463 target gene. A A

TATTGGA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337463 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337463 is therefore inhibition of CTSK. Accordingly, utilities of GAM337463 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM337463 DLST TGGAAGAATAGGCAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TATTGGA oxo- glutarat (DLST, Accession NM_001933.2) is another GAM337463 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337463 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337463 is therefore inhibition of

DLST, a GAM337463 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337463 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337464 APPBP2 TGGAAGAATAGGCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TATTGGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337464 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337464 is therefore inhibition of APPBP2, a GAM337464 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337464 CTSK TGGAAGAATAGGCAG CTSK (Accession NM_000396.2) is another GAM337464 target gene. A A

TATTGGA CTSK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSK BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337464 is therefore inhibition of CTSK. Accordingly, utilities of GAM337464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSK.

GAM337464 DLST TGGAAGAATAGGCAG Dihydrolipoamide S- succinyltransferase (E2 component of 2- A A

TATTGGA oxo- glutarat (DLST, Accession NM_001933.2) is another GAM337464 target gene. DLST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DLST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DLST BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM337464 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337464 is therefore inhibition of DLST, a GAM337464 target gene which catalyzes the oxidative decarboxylation of alpha- keto acids. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337464 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DLST.The function of DLST and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM240.

GAM337465 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337465 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337465 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337465 is therefore inhibition of APP. Accordingly, utilities of GAM337465 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337466 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337466 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337466 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337466 is therefore inhibition of APP. Accordingly, utilities of GAM337466 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337469 PRND AATGTGAATGTTGTA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A

TGCAGTG GAM337469 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337469 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337469 is therefore inhibition of PRND, a GAM337469 target gene which is similar to prion protein PRNP. and

therefore is associated with Alzheimer. Accordingly, utilities of GAM337469 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337470 SERPINA3 CTAGACTGAAGCTTTATGAGGA Serine (or cysteine) Proteinase Inhibitor, Clade A (alpha- 1 antiprotei (SERPINA3, Accession NM_001085.2) is a GAM337470 target gene. SERPINA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SERPINA3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337470 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337470 is therefore inhibition of SERPINA3, a GAM337470 target gene which is a member of the serpin family of serine protease inhibitors. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337470 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SERPINA3.The function of SERPINA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1032.

GAM337472 GYPA AGAGGCACAGATTAATGGAGTT Glycophorin A (includes MN blood group) (GYPA, Accession NM_002099.2) is a GAM337472 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337472 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337472 is therefore inhibition of GYPA, a GAM337472 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337472 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337472 IGF1 AGAGGCACAGATTAATGGAGTT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337472 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure A A

complementarity to the nucleotide sequence of GAM337472 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337472 is therefore inhibition of IGF1, a GAM337472 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337472 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337473 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337473 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337473 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337473 is therefore inhibition of APP. Accordingly, utilities of GAM337473 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337476 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337476 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337476 is therefore inhibition of APPBP2, a GAM337476 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337476 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337476 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337476 is therefore inhibition of BACE2, a GAM337476 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337476 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337476 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337476 is therefore inhibition of FHL2, a GAM337476 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337476 HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337476 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337476 is therefore inhibition of HD. Accordingly, utilities of GAM337476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337476 IGF1 A A CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession

TGGGCAA NM_000618.2) is another GAM337476 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337476 is therefore inhibition of IGF1, a GAM337476 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337476 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337476 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337476 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337476 is therefore inhibition of PRND, a GAM337476 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337476 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337477 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337477 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337477 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337477 is therefore inhibition of APP. Accordingly, utilities of GAM337477 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with APP.

GAM337478 FLNB TATGTCACTCCTTTG CCCAGAC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession NM_001457.1) is a GAM337478 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337478 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337478 is therefore inhibition of FLNB, a GAM337478 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337478 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM337479 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337479 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337479 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337479 is therefore inhibition of APPBP2, a GAM337479 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337479 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337479 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337479 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337479 is therefore inhibition of BACE2, a GAM337479 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337479 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337479 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337479 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337479 is therefore inhibition of FHL2, a GAM337479 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337479 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337479 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337479 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337479 is therefore inhibition of IGF1, a GAM337479 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337479 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337479 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337479 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337479 is therefore inhibition of MME, a GAM337479 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337479 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337479 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337479 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337479 is therefore inhibition of PRND, a GAM337479 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337479 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337480 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337480 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337480 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337480 is therefore inhibition of APP. Accordingly, utilities of GAM337480 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with APP.

GAM337481 MAPT TACAAATGTTTCTTC TCCTTTT Microtubule- associated Protein Tau (MAPT, Accession NM_173727.1) is a GAM337481 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337481 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337481 is therefore inhibition of MAPT, a GAM337481 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337481 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337482 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337482 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337482 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337482 is therefore inhibition of APPBP2, a GAM337482 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337482 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337482 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337482 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337482 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337482 is therefore inhibition of BACE2, a GAM337482 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337482 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337482 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337482 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337482 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337482 is therefore inhibition of FHL2, a GAM337482 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337482 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337482 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337482 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337482 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337482 is therefore inhibition of HD. Accordingly, utilities of GAM337482 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337482 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337482 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING

SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337482 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337482 is therefore inhibition of IGF1, a GAM337482 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337482 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337482 PRND CATTGCACTCCAGCC TGGGCAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337482 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337482 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337482 is therefore inhibition of PRND, a GAM337482 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337482 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337485 MME GTGGGCTGAGAAAGG CTGCCCA Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_007287.1) is a GAM337485 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337485 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337485 is therefore inhibition of MME, a GAM337485 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337485 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases

and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337485 NCSTN GTGGGCTGAGAAAGG NCSTN (Accession NM_015331.1) is another GAM337485 target gene. A A

CTGCCCA NCSTN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337485 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337485 is therefore inhibition of NCSTN, a GAM337485 target gene which has a central role in presenilin- mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp-1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337485 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337485 NOTCH1 GTGGGCTGAGAAAGG Notch (Drosophila) Homolog 1 (translocation- associated) A A

CTGCCCA (NOTCH1, Accession NM_017617.2) is another GAM337485 target gene. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NOTCH1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337485 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337485 is therefore inhibition of NOTCH1, a GAM337485 target gene which is possibly involved in cell differentiation and lymphocyte function. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337485 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NOTCH1.The function of NOTCH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM869.

GAM337486 DHCR24 TAAGGCACTGCTTCT 24- dehydrocholesterol Reductase (DHCR24, Accession A A

AAGTAGG NM_014762.1) is a GAM337486 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM337486 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337486 is therefore inhibition of DHCR24, a GAM337486 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337486 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337488 APPBP2 TGAGGCAGAAGGATT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

ACTTGAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337488 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337488 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337488 is therefore inhibition of APPBP2, a GAM337488 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337488 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337488 IGF1 TGAGGCAGAAGGATT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

ACTTGAG NM_000618.2) is another GAM337488 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337488 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337488 is therefore inhibition of IGF1, a GAM337488 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337488 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337489 ACE GGAGGAGGAGGCTGG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TGCTGGT (ACE, Accession NM_000789.2) is a GAM337489 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337489 is therefore inhibition of ACE, a GAM337489 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337489 BACE2 GGAGGAGGAGGCTGG Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGCTGGT NM_012105.3) is another GAM337489 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of BACE2, a GAM337489 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337489 GLUL GGAGGAGGAGGCTGG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
TGCTGGT NM_002065.3) is another GAM337489 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of GLUL, a GAM337489 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337489 HD GGAGGAGGAGGCTGG HD (Accession NM_002111.3) is another GAM337489 target gene. HD A A

TGCTGGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of HD. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337489 MAPT GGAGGAGGAGGCTGG Microtubule- associated Protein Tau (MAPT, Accession A A

TGCTGGT NM_173727.1) is another GAM337489 target gene. MAPT BINDING SITE1 and MAPT BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MAPT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE1 and MAPT BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of MAPT, a GAM337489 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337489 MME GGAGGAGGAGGCTGG Membrane Metallo- endopeptidase (neutral endopeptidase, A A

TGCTGGT enkephalinase, (MME, Accession NM_007287.1) is another GAM337489 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of MME, a GAM337489 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337489 OGDH GGAGGAGGAGGCTGG A A TGCTGGT Oxoglutarate Dehydrogenase (lipoamide) (OGDH, Accession NM_002541.1) is another GAM337489 target gene. OGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of OGDH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of OGDH, a GAM337489 target gene which helps convert a- ketoglutarate to succinyl coenzyme A in Krebs cycle. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with OGDH.The function of OGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2014.

GAM337489 PSEN1 GGAGGAGGAGGCTGG A A TGCTGGT PSEN1 (Accession NM_007318.1) is another GAM337489 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337489 SLC6A4 GGAGGAGGAGGCTGG A A TGCTGGT Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM337489 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337489 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337489 is therefore inhibition of SLC6A4, a GAM337489 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337489 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM337490 ACT TTCAGGACTGTGGAC Activator of CAMP- responsive Element Modulator (CR (ACT, A A TGGGCTG Accession NM_020482.3) is a GAM337490 target gene. ACT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337490 is therefore inhibition of ACT, a GAM337490 target gene which a plasma protease inhibitor synthesized in the liver. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACT.The function of ACT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1484.

GAM337490 APBA2 TTCAGGACTGTGGAC Amyloid Beta (A4) Precursor Protein- binding, Family A, Member A A TGGGCTG 2 (X11- l (APBA2, Accession NM_005503.2) is another GAM337490 target gene. APBA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBA2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337490 is therefore inhibition of APBA2, a GAM337490 target gene which interacts with and stabilisesthe Alzheimer's disease amyloid precursor protein (APP) and inhibits production of proteolytic APP fragments. and therefore

is associated with Alzheimer. Accordingly, utilities of GAM337490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBA2.The function of APBA2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337490 APBB2 TTCAGGACTGTGGAC Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

TGGGCTG 2 (Fe65- (APBB2, Accession NM_173075.1) is another GAM337490 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337490 is therefore inhibition of APBB2, a GAM337490 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337490 PLCD1 TTCAGGACTGTGGAC Phospholipase C, Delta 1 (PLCD1, Accession NM_006225.1) is A A

TGGGCTG another GAM337490 target gene. PLCD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLCD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PLCD1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337490 is therefore inhibition of PLCD1, a GAM337490 target gene which acts as a signal transducer that generates 2 messengers, diacylglycerol and inositol 1,4,5-trisphosphate and therefore is associated with Alzheimer. Accordingly, utilities of GAM337490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PLCD1.The function of PLCD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM205.

GAM337490 TRPM2 TTCAGGACTGTGGAC TRPM2 (Accession NM_003307.1) is another GAM337490 target gene. A A

TGGGCTG TRPM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337490 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337490 is therefore inhibition of TRPM2, a GAM337490 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM337490 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337495 APBB2 GATTGCTTGAGCCCT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A
GGAGGTT 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337495 target gene. APBB2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337495 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337495 is therefore inhibition of APBB2, a GAM337495 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337495 GFAP GATTGCTTGAGCCCT GFAP (Accession NM_002055.2) is another GAM337495 target gene. A A
GGAGGTT GFAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337495 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337495 is therefore inhibition of GFAP. Accordingly, utilities of GAM337495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337495 IGF1 GATTGCTTGAGCCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGAGGTT NM_000618.2) is another GAM337495 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337495 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337495 is therefore inhibition of IGF1, a GAM337495 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337495 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337496 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337496 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337496 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337496 is therefore inhibition of APPBP2, a GAM337496 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337496 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337496 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337496 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337496 is therefore inhibition of BACE2, a GAM337496 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337496 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337496 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337496 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337496 is therefore inhibition of FHL2, a GAM337496 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337496 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337496 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337496 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337496 is therefore inhibition of IGF1, a GAM337496 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337496 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337496 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337496 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337496 is therefore inhibition of MME, a GAM337496 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337496 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337496 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337496 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337496 is therefore inhibition of PRND, a GAM337496 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337496 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337497 APPBP2 GTGGCCTTTCTGGTC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGTGTAT Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337497 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337497 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337497 is therefore inhibition of APPBP2, a GAM337497 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM337497 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337497 FLNB GTGGCCTTTCTGGTC Filamin B, Beta (actin- binding protein- 278) (FLNB, Accession A A

TGTGTAT NM_001457.1) is another GAM337497 target gene. FLNB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLNB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FLNB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337497 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337497 is therefore inhibition of FLNB, a GAM337497 target gene which Filamin B, beta; binds actin, interacts with cytoplasmic domain of Ibalpha. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337497 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FLNB.The function of FLNB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1193.

GAM337498 DSCR1 TGATTGTCCAAACGC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

AATTCTT NM_004414.3) is a GAM337498 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337498 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337498 is therefore inhibition of DSCR1, a GAM337498 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337498 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM337499 DSCR1 TGATTGTCCAAACGC Down Syndrome Critical Region Gene 1 (DSCR1, Accession A A

AATTCTT NM_004414.3) is a GAM337499 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337499 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337499 is therefore inhibition of DSCR1, a GAM337499 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337499 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM337500 DSCR1 TGATTGTCCAAACGC A A AATTCTT Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM337500 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337500 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337500 is therefore inhibition of DSCR1, a GAM337500 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337500 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1332.

GAM337501 DSCR1 TGATTGTCCAAACGC A A AATTCTT Down Syndrome Critical Region Gene 1 (DSCR1, Accession NM_004414.3) is a GAM337501 target gene. DSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DSCR1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337501 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337501 is therefore inhibition of DSCR1, a GAM337501 target gene which inhibits calcineurin- dependent transcriptional responses. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337501 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DSCR1.The function of DSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM1332.

GAM337502 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337502 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337502 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337502 is therefore inhibition of APP. Accordingly, utilities of GAM337502 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337507 BAX CCTTGTGTTTTCCAG BCL2- associated X Protein (BAX, Accession NM_138764.1) is a A A

ATTCTGA GAM337507 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337507 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337507 is therefore inhibition of BAX, a GAM337507 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM337507 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM337507 TNF CCTTGTGTTTTCCAG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

ATTCTGA Accession NM_000594.2) is another GAM337507 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337507 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337507 is therefore inhibition of TNF, a GAM337507 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337507 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM99.

GAM337508 BAX CCTTGTGTTTTCCAG BCL2- associated X Protein (BAX, Accession NM_138764.1) is a A A

ATTCTGA GAM337508 target gene. BAX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BAX BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337508 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337508 is therefore inhibition of BAX, a GAM337508 target gene which accelerates programmed cell death and therefore is associated with Alzheimer. Accordingly, utilities of GAM337508 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BAX.The function of BAX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1650.

GAM337508 TNF CCTTGTGTTTTCCAG Tumor Necrosis Factor (TNF superfamily, member 2) (TNF, A A

ATTCTGA Accession NM_000594.2) is another GAM337508 target gene. TNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337508 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337508 is therefore inhibition of TNF, a GAM337508 target gene which mediates proinflammatory responses and apoptosis and therefore is associated with Alzheimer. Accordingly, utilities of GAM337508 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNF.The function of TNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337510 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337510 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337510 is therefore inhibition of APPBP2,

a GAM337510 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337510 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337510 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337510 is therefore inhibition of BACE2, a GAM337510 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337510 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337510 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337510 is therefore inhibition of FHL2, a GAM337510 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337510 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337510 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337510 is therefore inhibition of HD. Accordingly, utilities of GAM337510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337510 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337510 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337510 is therefore inhibition of IGF1, a GAM337510 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337510 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337510 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337510 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337510 is therefore inhibition of PRND, a GAM337510 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337510 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM337511 RAGE AGAATGAAAGGCAGT Renal Tumor Antigen (RAGE, Accession NM_014226.1) is a A A TCCTAGC GAM337511 target gene. RAGE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAGE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of RAGE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337511 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337511 is therefore inhibition of RAGE, a GAM337511 target gene which is essential for the completion of the start, the controlling event, in the cell cycle and therefore is associated with Alzheimer. Accordingly, utilities of GAM337511 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with RAGE.The function of RAGE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1523.

GAM337512 FHL2 ACTGCACTCCTGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A GGGTGAC a GAM337512 target gene. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337512 is therefore inhibition of FHL2, a GAM337512 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337512 IGF1 ACTGCACTCCTGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A GGGTGAC NM_000618.2) is another GAM337512 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337512 is therefore inhibition of

IGF1, a GAM337512 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337512 PRND ACTGCACTCCTGCCT GGGTGAC A A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337512 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337512 is therefore inhibition of PRND, a GAM337512 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337512 TNFRSF5 ACTGCACTCCTGCCT GGGTGAC A A TNFRSF5 (Accession NM_152854.1) is another GAM337512 target gene. TNFRSF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TNFRSF5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337512 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337512 is therefore inhibition of TNFRSF5. Accordingly, utilities of GAM337512 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TNFRSF5.

GAM337515 PSEN1 TGATGCTTGAGCACA GTACCTC A A PSEN1 (Accession NM_007318.1) is a GAM337515 target gene. PSEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337515 RNA are set forth in Tables 6

and 7, hereby incorporated herein.

A function of GAM337515 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337515 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337516 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337516 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337516 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337516 is therefore inhibition of APPBP2, a GAM337516 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337516 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337516 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337516 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337516 is therefore inhibition of BACE2, a GAM337516 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337516 FHL2 ACTGCACTCCAGCCT GGGCAAC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337516 target gene. FHL2 BINDING SITE1 and FHL2 BINDING A A

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337516 is therefore inhibition of FHL2, a GAM337516 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337516 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337516 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337516 is therefore inhibition of IGF1, a GAM337516 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337516 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337516 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337516 is therefore inhibition of MME, a GAM337516 target gene which is thermolysin- like specificity.

and therefore is associated with Alzheimer. Accordingly, utilities of GAM337516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337516 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337516 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337516 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337516 is therefore inhibition of PRND, a GAM337516 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337516 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337518 AVP GACCCCTTGCCCGTG AVP (Accession NM_000490.2) is a GAM337518 target gene. AVP A A

GCTCCCA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AVP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AVP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337518 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337518 is therefore inhibition of AVP. Accordingly, utilities of GAM337518 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AVP.

GAM337518 TGFB1 GACCCCTTGCCCGTG TGFB1 (Accession NM_000660.1) is another GAM337518 target gene. A A

GCTCCCA TGFB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337518 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337518 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337518 include diagnosis,

prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337520 MTNR1A TGTATGCTCTGTGAA A A GCTTACT Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is a GAM337520 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337520 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337520 is therefore inhibition of MTNR1A, a GAM337520 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337520 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337521 ACE TTGCAAGGAAGGGGA A A GGAGGCT Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 (ACE, Accession NM_152831.1) is a GAM337521 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337521 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337521 is therefore inhibition of ACE, a GAM337521 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337521 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337521 BACE2 TTGCAAGGAAGGGGA A A GGAGGCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337521 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337521 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337521 is therefore inhibition of BACE2, a GAM337521 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337521 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337521 CNTF TTGCAAGGAAGGGGA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A

GGAGGCT another GAM337521 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337521 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337521 is therefore inhibition of CNTF, a GAM337521 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337521 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337521 GLUL TTGCAAGGAAGGGGA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A

GGAGGCT NM_002065.3) is another GAM337521 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337521 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337521 is therefore inhibition of GLUL, a GAM337521 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337521 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337521 HD TTGCAAGGAAGGGGA HD (Accession NM_002111.3) is another GAM337521 target gene. HD A A

GGAGGCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337521 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337521 is therefore inhibition of HD. Accordingly, utilities of GAM337521 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337521 IGF1 TTGCAAGGAAGGGGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGAGGCT NM_000618.2) is another GAM337521 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337521 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337521 is therefore inhibition of IGF1, a GAM337521 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337521 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337522 ACE TTGCAAGGAAGGGGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GGAGGCT (ACE, Accession NM_152831.1) is a GAM337522 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337522 is therefore inhibition of ACE, a GAM337522 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM44.

GAM337522 BACE2 TTGCAAGGAAGGGGA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A GGAGGCT NM_138992.1) is another GAM337522 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337522 is therefore inhibition of BACE2, a GAM337522 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337522 CNTF TTGCAAGGAAGGGGA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A GGAGGCT another GAM337522 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337522 is therefore inhibition of CNTF, a GAM337522 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337522 GLUL TTGCAAGGAAGGGGA Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A GGAGGCT NM_002065.3) is another GAM337522 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337522 is therefore inhibition of GLUL, a GAM337522 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337522 HD TTGCAAGGAAGGGGA HD (Accession NM_002111.3) is another GAM337522 target gene. HD A A

GGAGGCT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337522 is therefore inhibition of HD. Accordingly, utilities of GAM337522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337522 IGF1 TTGCAAGGAAGGGGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGAGGCT NM_000618.2) is another GAM337522 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337522 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337522 is therefore inhibition of IGF1, a GAM337522 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337522 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337523 ACE TTGCAAGGAAGGGGA Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GGAGGCT (ACE, Accession NM_152831.1) is a GAM337523 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence

of GAM337523 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337523 is therefore inhibition of ACE, a GAM337523 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337523 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337523 BACE2 TTGCAAGGAAGGGGA GGAGGCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337523 target gene. BACE2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337523 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337523 is therefore inhibition of BACE2, a GAM337523 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337523 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337523 CNTF TTGCAAGGAAGGGGA GGAGGCT Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is another GAM337523 target gene. CNTF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337523 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337523 is therefore inhibition of CNTF, a GAM337523 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337523 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM175.

GAM337523 GLUL TTGCAAGGAAGGGGA A A GGAGGCT Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession NM_002065.3) is another GAM337523 target gene. GLUL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337523 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337523 is therefore inhibition of GLUL, a GAM337523 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337523 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337523 HD TTGCAAGGAAGGGGA A A GGAGGCT HD (Accession NM_002111.3) is another GAM337523 target gene. HD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337523 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337523 is therefore inhibition of HD. Accordingly, utilities of GAM337523 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337523 IGF1 TTGCAAGGAAGGGGA A A GGAGGCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337523 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337523 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337523 is therefore inhibition of IGF1, a GAM337523 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337523 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its

association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337524 ACE CGCTATGTTGGCCAG Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A

GCTGGTC (ACE, Accession NM_152831.1) is a GAM337524 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337524 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337524 is therefore inhibition of ACE, a GAM337524 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337524 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337524 ADAM17 CGCTATGTTGGCCAG A Disintegrin and Metalloproteinase Domain 17 (tumor necrosis A A

GCTGGTC factor, (ADAM17, Accession NM_021832.1) is another GAM337524 target gene. ADAM17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADAM17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAM17 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337524 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337524 is therefore inhibition of ADAM17, a GAM337524 target gene which is a member of ADAM family of zinc metalloproteases. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337524 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAM17.The function of ADAM17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337524 HD CGCTATGTTGGCCAG HD (Accession NM_002111.3) is another GAM337524 target gene. HD A A

GCTGGTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337524

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337524 is therefore inhibition of HD. Accordingly, utilities of GAM337524 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337524 IAPP CGCTATGTTGGCCAG Islet Amyloid Polypeptide (IAPP, Accession NM_000415.1) is A A
GCTGGTC another GAM337524 target gene. IAPP BINDING SITE1 and IAPP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IAPP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IAPP BINDING SITE1 and IAPP BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337524 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337524 is therefore inhibition of IAPP, a GAM337524 target gene which selectively inhibits insulin-stimulated glucose utilization and glycogen deposition and therefore is associated with Alzheimer. Accordingly, utilities of GAM337524 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IAPP.The function of IAPP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.

GAM337524 TGFB1 CGCTATGTTGGCCAG TGFB1 (Accession NM_000660.1) is another GAM337524 target gene. A A
GCTGGTC TGFB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGFB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TGFB1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337524 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337524 is therefore inhibition of TGFB1. Accordingly, utilities of GAM337524 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TGFB1.

GAM337525 HD TTGCATATGCATGGG HD (Accession NM_002111.3) is a GAM337525 target gene. HD A A
TACACAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337525 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337525 is therefore inhibition of HD.

Accordingly, utilities of GAM337525 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337526 PRNP AGGCAGAGAGGTATT Prion Protein (p27- 30) (Creutzfeld- Jakob disease, Gerstmann- A A
TAGGCAT Strausler- (PRNP, Accession NM_000311.1) is a GAM337526 target gene. PRNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRNP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337526 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337526 is therefore inhibition of PRNP, a GAM337526 target gene which the function of prp is not known. prp is encoded in the host genome and is expressed both in normal and infected cells. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337526 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRNP.The function of PRNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.

GAM337528 NPY GGCTAGAAAGCCAGA Neuropeptide Y (NPY, Accession NM_000905.2) is a GAM337528 A A
GAGACAG target gene. NPY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NPY BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337528 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337528 is therefore inhibition of NPY, a GAM337528 target gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337528 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NPY.The function of NPY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM193.

GAM337529 APPBP2 TTTATTAGTTGTCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGTTTA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337529 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and

secondary structure complementarity to the nucleotide sequence of GAM337529 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337529 is therefore inhibition of APPBP2, a GAM337529 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337529 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337530 APBB2 TAAGAAGAGAAAGAA Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAGGCTG 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337530 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337530 is therefore inhibition of APBB2, a GAM337530 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337530 BACE TAAGAAGAGAAAGAA Beta- site APP- cleaving Enzyme (BACE, Accession NM_138971.1) A A

GAGGCTG is another GAM337530 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337530 is therefore inhibition of BACE, a GAM337530 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with

BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337530 BCHE TAAGAAGAGAAAGAA BCHE (Accession NM_000055.1) is another GAM337530 target gene. A A

GAGGCTG BCHE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BCHE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337530 is therefore inhibition of BCHE. Accordingly, utilities of GAM337530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BCHE.

GAM337530 FOS TAAGAAGAGAAAGAA V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A

GAGGCTG Accession NM_005252.2) is another GAM337530 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337530 is therefore inhibition of FOS, a GAM337530 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337530 GYPA TAAGAAGAGAAAGAA Glycophorin A (includes MN blood group) (GYPA, Accession A A

GAGGCTG NM_002099.2) is another GAM337530 target gene. GYPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GYPA BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337530 is therefore inhibition of GYPA, a GAM337530 target gene which determines the M or N blood group. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337530 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with GYPA.The function of GYPA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM317.

GAM337530 NGB A A TAAGAAGAGAAAGAA GAGGCTG Neuroglobin (NGB, Accession NM_021257.2) is another target gene. NGB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NGB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NGB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337530 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337530 is therefore inhibition of NGB, a GAM337530 target gene which has function in oxygen transport and storage in humans. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337530 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NGB.The function of NGB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337531 APP A A TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337531 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337531 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337531 is therefore inhibition of APP. Accordingly, utilities of GAM337531 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337533 APP A A TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337533 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337533 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337533 is therefore inhibition of APP. Accordingly, utilities of GAM337533 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337534 APP A A TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337534 target gene. APP

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337534 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337534 is therefore inhibition of APP. Accordingly, utilities of GAM337534 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337541 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337541 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337541 is therefore inhibition of APPBP2, a GAM337541 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337541 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337541 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337541 is therefore inhibition of BACE2, a GAM337541 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM189.

GAM337541 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337541 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337541 is therefore inhibition of FHL2, a GAM337541 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337541 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337541 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337541 is therefore inhibition of HD. Accordingly, utilities of GAM337541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337541 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337541 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337541 is therefore inhibition of IGF1, a GAM337541 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337541 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337541 PRND CATTGCACTCCAGCC TGGGCAA A A

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337541 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337541 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337541 is therefore inhibition of PRND, a GAM337541 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337541 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337542 APPBP2 CATTGCACTCCAGCC TGGGCAA A A

Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337542 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337542 is therefore inhibition of APPBP2, a GAM337542 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337542 BACE2 CATTGCACTCCAGCC TGGGCAA A A

Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337542 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337542 is therefore inhibition of BACE2, a GAM337542 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337542 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337542 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337542 is therefore inhibition of FHL2, a GAM337542 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337542 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337542 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337542 is therefore inhibition of HD. Accordingly, utilities of GAM337542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337542 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337542 target gene. IGF1 BINDING SITE1

and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337542 is therefore inhibition of IGF1, a GAM337542 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337542 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM337542 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337542 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337542 is therefore inhibition of PRND, a GAM337542 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337542 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337543 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337543 target gene. APP A A GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337543 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337543 is therefore inhibition of APP. Accordingly, utilities of GAM337543 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337544 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337544 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337544 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337544 is therefore inhibition of APP. Accordingly, utilities of GAM337544 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337545 APPBP2 GCCATTGCACTCCAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

CCTGGAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337545 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337545 is therefore inhibition of APPBP2, a GAM337545 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337545 CTSB GCCATTGCACTCCAG CTSB (Accession NM_001908.2) is another GAM337545 target gene. A A

CCTGGAC CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CTSB BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337545 is therefore inhibition of CTSB. Accordingly, utilities of GAM337545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CTSB.

GAM337545 FHL2 GCCATTGCACTCCAG Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

CCTGGAC another GAM337545 target gene. FHL2 BINDING SITE is a target binding

site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337545 is therefore inhibition of FHL2, a GAM337545 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337545 IGF1 GCCATTGCACTCCAG A Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
CCTGGAC NM_000618.2) is another GAM337545 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337545 is therefore inhibition of IGF1, a GAM337545 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337545 PRND GCCATTGCACTCCAG A Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A
CCTGGAC another GAM337545 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337545 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337545 is therefore inhibition of PRND, a GAM337545 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM337545 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337547 IGF1 TCTTTCTTAAATGGA TGCATGA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is a GAM337547 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337547 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337547 is therefore inhibition of IGF1, a GAM337547 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337547 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337548 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337548 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337548 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337548 is therefore inhibition of APPBP2, a GAM337548 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337548 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337548 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a A A

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337548 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337548 is therefore inhibition of BACE2, a GAM337548 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337548 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337548 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337548 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337548 is therefore inhibition of FHL2, a GAM337548 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337548 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337548 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337548 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337548 is therefore inhibition of IGF1, a GAM337548 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337548 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337548 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337548 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337548 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337548 is therefore inhibition of MME, a GAM337548 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337548 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337548 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337548 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337548 is therefore inhibition of PRND, a GAM337548 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337548 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337549 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337549 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide

sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337549 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337549 is therefore inhibition of APPBP2, a GAM337549 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337549 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337549 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337549 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337549 is therefore inhibition of BACE2, a GAM337549 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337549 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337549 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337549 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337549 is therefore inhibition of FHL2, a GAM337549 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337549 IGF1 ACTGCACTCCAGCCT GGGCAAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337549 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337549 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337549 is therefore inhibition of IGF1, a GAM337549 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337549 MME ACTGCACTCCAGCCT GGGCAAC Membrane Metallo- endopeptidase (neutral endopeptidase, enkephalinase, (MME, Accession NM_000902.2) is another GAM337549 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337549 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337549 is therefore inhibition of MME, a GAM337549 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337549 PRND ACTGCACTCCAGCCT GGGCAAC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337549 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING A A

SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337549 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337549 is therefore inhibition of PRND, a GAM337549 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337549 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337552 APPBP2 ACTGCACTCCAGCCT GGGCAAC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337552 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337552 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337552 is therefore inhibition of APPBP2, a GAM337552 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337552 BACE2 ACTGCACTCCAGCCT GGGCAAC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_012105.3) is another GAM337552 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337552 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337552 is therefore inhibition of BACE2, a GAM337552 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The

function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337552 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337552 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337552 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337552 is therefore inhibition of FHL2, a GAM337552 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337552 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337552 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337552 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337552 is therefore inhibition of IGF1, a GAM337552 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337552 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337552 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences

of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337552 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337552 is therefore inhibition of MME, a GAM337552 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337552 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A GGGCAAC another GAM337552 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337552 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337552 is therefore inhibition of PRND, a GAM337552 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337552 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337553 FOS TGAAAGAGATGGGAC V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A AGTGACT Accession NM_005252.2) is a GAM337553 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337553 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337553 is therefore inhibition of FOS, a GAM337553 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337553 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337554 FOS TGAAAGAGATGGGAC V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A

AGTGACT Accession NM_005252.2) is a GAM337554 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337554 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337554 is therefore inhibition of FOS, a GAM337554 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337554 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337555 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337555 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337555 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337555 is therefore inhibition of APPBP2, a GAM337555 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337555 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337555 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337555 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337555 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337555 is therefore inhibition of BACE2, a GAM337555 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337555 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337555 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337555 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337555 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337555 is therefore inhibition of FHL2, a GAM337555 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337555 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337555 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337555 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337555 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337555 is therefore inhibition of IGF1, a GAM337555 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337555 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337555 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337555 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337555 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337555 is therefore inhibition of MME, a GAM337555 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337555 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337555 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337555 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337555 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337555 is therefore inhibition of PRND, a GAM337555 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337555 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337556 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337556 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337556 is therefore inhibition of APPBP2, a GAM337556 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337556 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A GGGCAAC NM_012105.3) is another GAM337556 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337556 is therefore inhibition of BACE2, a GAM337556 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337556 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A GGGCAAC another GAM337556 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337556 is therefore inhibition of FHL2, a GAM337556 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337556 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337556 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337556 is therefore inhibition of IGF1, a GAM337556 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337556 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337556 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337556 is therefore inhibition of MME, a GAM337556 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337556 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337556 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337556 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337556 is therefore inhibition of PRND, a GAM337556 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337556 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337558 PRND ATGCCACAGCACTTC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is a A A
AGCCTGA GAM337558 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337558 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337558 is therefore inhibition of PRND, a GAM337558 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337558 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337566 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337566 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337566 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337566 is therefore inhibition of APP. Accordingly, utilities of GAM337566 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337567 APPBP2 TGTAAACATCCCCGA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
CTGGAAG Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337567 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337567 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337567 is therefore inhibition of APPBP2, a GAM337567 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated

with Alzheimer. Accordingly, utilities of GAM337567 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337567 CASP3 TGTAAACATCCCCGA CTGGAAG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is another GAM337567 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337567 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337567 is therefore inhibition of CASP3, a GAM337567 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337567 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337568 APPBP2 TGTAAACATCCCCGA CTGGAAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337568 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337568 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337568 is therefore inhibition of APPBP2, a GAM337568 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337568 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337568 CASP3 TGTAAACATCCCCGA CTGGAAG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is another GAM337568 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, A A

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337568 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337568 is therefore inhibition of CASP3, a GAM337568 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337568 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337569 APPBP2 TGTAAACATCCCCGA CTGGAAG Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337569 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337569 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337569 is therefore inhibition of APPBP2, a GAM337569 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337569 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337569 CASP3 TGTAAACATCCCCGA CTGGAAG Caspase 3, Apoptosis- related Cysteine Protease (CASP3, Accession NM_032991.1) is another GAM337569 target gene. CASP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CASP3 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337569 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337569 is therefore inhibition of CASP3, a GAM337569 target gene which is one apoptosis- related cysteine protease and is important for the initiation of apoptotic cell death. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337569 include diagnosis, prevention and treatment

of Alzheimer, and of other diseases and clinical conditions associated with CASP3.The function of CASP3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM801.

GAM337570 ACE TTGATGAATGGGTGC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TCCAGGA (ACE, Accession NM_152831.1) is a GAM337570 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337570 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337570 is therefore inhibition of ACE, a GAM337570 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337570 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337570 IGF1 TTGATGAATGGGTGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCCAGGA NM_000618.2) is another GAM337570 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337570 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337570 is therefore inhibition of IGF1, a GAM337570 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337570 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337570 IL1A TTGATGAATGGGTGC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TCCAGGA GAM337570 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the

nucleotide sequence of GAM337570 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337570 is therefore inhibition of IL1A, a GAM337570 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337570 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337571 ACE TTGATGAATGGGTGC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A TCCAGGA (ACE, Accession NM_152831.1) is a GAM337571 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337571 is therefore inhibition of ACE, a GAM337571 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337571 IGF1 TTGATGAATGGGTGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A TCCAGGA NM_000618.2) is another GAM337571 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337571 is therefore inhibition of IGF1, a GAM337571 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337571 IL1A TTGATGAATGGGTGC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TCCAGGA GAM337571 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337571 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337571 is therefore inhibition of IL1A, a GAM337571 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337571 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337572 ACE TTGATGAATGGGTGC Angiotensin I Converting Enzyme (peptidyl- dipeptidase A) 1 A A
TCCAGGA (ACE, Accession NM_152831.1) is a GAM337572 target gene. ACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337572 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337572 is therefore inhibition of ACE, a GAM337572 target gene which Angiotensin I- converting enzyme (dipeptidyl carboxypeptidase 1). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337572 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ACE.The function of ACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337572 IGF1 TTGATGAATGGGTGC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
TCCAGGA NM_000618.2) is another GAM337572 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337572 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337572 is therefore inhibition of IGF1, a GAM337572 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337572 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337572 IL1A TTGATGAATGGGTGC Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A

TCCAGGA GAM337572 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337572 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337572 is therefore inhibition of IL1A, a GAM337572 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337572 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337573 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337573 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337573 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337573 is therefore inhibition of APP. Accordingly, utilities of GAM337573 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337574 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337574 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337574 is therefore inhibition of APPBP2, a GAM337574 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337574 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337574 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337574 is therefore inhibition of BACE2, a GAM337574 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337574 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337574 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337574 is therefore inhibition of FHL2, a GAM337574 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical

conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337574 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337574 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337574 is therefore inhibition of HD. Accordingly, utilities of GAM337574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337574 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337574 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337574 is therefore inhibition of IGF1, a GAM337574 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337574 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337574 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337574 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337574 is therefore inhibition of

PRND, a GAM337574 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337574 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337575 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337575 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337575 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337575 is therefore inhibition of APPBP2, a GAM337575 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337575 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337575 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337575 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337575 is therefore inhibition of BACE2, a GAM337575 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337575 FHL2 CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337575 target gene. FHL2 BINDING SITE1 and FHL2 BINDING A A

SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337575 is therefore inhibition of FHL2, a GAM337575 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337575 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337575 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337575 is therefore inhibition of HD. Accordingly, utilities of GAM337575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337575 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337575 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337575 is therefore inhibition of IGF1, a GAM337575 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with

reference to GAM25.

GAM337575 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337575 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337575 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337575 is therefore inhibition of PRND, a GAM337575 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337575 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337576 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337576 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337576 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337576 is therefore inhibition of APP. Accordingly, utilities of GAM337576 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337578 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337578 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337578 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337578 is therefore inhibition of APP. Accordingly, utilities of GAM337578 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337579 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337579 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337579 is therefore inhibition of APPBP2, a GAM337579 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337579 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337579 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337579 is therefore inhibition of BACE2, a GAM337579 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337579 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337579 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337579 is therefore inhibition of FHL2, a GAM337579 target gene which Contains four LIM domains and an

additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337579 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337579 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337579 is therefore inhibition of IGF1, a GAM337579 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337579 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337579 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337579 is therefore inhibition of MME, a GAM337579 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337579 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337579 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337579 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337579 is therefore inhibition of PRND, a GAM337579 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337579 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337580 TRPM2 ACAGTCCTCTACTCC TRPM2 (Accession NM_003307.1) is a GAM337580 target gene. TRPM2 A A

AGCTCCC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337580 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337580 is therefore inhibition of TRPM2, a GAM337580 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of GAM337580 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337581 SLC17A7 GGCAGGATGGAGCAG SOLUTE CARRIER FAMILY 17, MEMBER 7 (SLC17A7, Accession A A

GGCTAAA NM_020309.1) is a GAM337581 target gene. SLC17A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC17A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC17A7 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337581 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337581 is therefore inhibition of SLC17A7, a GAM337581 target gene which is a brain- specific Na-dependent inorganic phosphate cotransporter and therefore is associated with Alzheimer. Accordingly, utilities of GAM337581 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC17A7.The function of SLC17A7 and its association with various diseases and clinical conditions, has been established by previous studies, as

described hereinabove with reference to GAM354.

GAM337584 AGER CCAGTACTGTCTTGA Advanced Glycosylation End Product- specific Receptor (AGER, A A TGCCTGC Accession NM_172197.1) is a GAM337584 target gene. AGER BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AGER, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AGER BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337584 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337584 is therefore inhibition of AGER, a GAM337584 target gene which Receptor for advanced glycosylation end products (receptor for AGE). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337584 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AGER.The function of AGER and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2350.

GAM337585 AGER CCAGTACTGTCTTGA Advanced Glycosylation End Product- specific Receptor (AGER, A A TGCCTGC Accession NM_172197.1) is a GAM337585 target gene. AGER BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AGER, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of AGER BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337585 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337585 is therefore inhibition of AGER, a GAM337585 target gene which Receptor for advanced glycosylation end products (receptor for AGE). and therefore is associated with Alzheimer. Accordingly, utilities of GAM337585 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with AGER.The function of AGER and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM2350.

GAM337586 MTNR1A GGCAACATGCTGAAA Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is a A A CCCCAGC GAM337586 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337586 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337586 is therefore inhibition of MTNR1A, a GAM337586 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337586 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337586 PRND GGCAACATGCTGAAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

CCCCAGC another GAM337586 target gene. PRND BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337586 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337586 is therefore inhibition of PRND, a GAM337586 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337586 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337587 MTNR1A GGCAACATGCTGAAA Melatonin Receptor 1A (MTNR1A, Accession NM_005958.2) is a A A

CCCCAGC GAM337587 target gene. MTNR1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTNR1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MTNR1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337587 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337587 is therefore inhibition of MTNR1A, a GAM337587 target gene which likely mediates the reproductive and circadian actions of melatonin. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337587 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MTNR1A.The function of MTNR1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM401.

GAM337587 PRND GGCAACATGCTGAAA Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

CCCCAGC another GAM337587 target gene. PRND BINDING SITE is a target binding

site found in the 3` untranslated region of mRNA encoded by PRND, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337587 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337587 is therefore inhibition of PRND, a GAM337587 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337587 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337588 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337588 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337588 is therefore inhibition of APPBP2, a GAM337588 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337588 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337588 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337588 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337588 is therefore inhibition of BACE2, a GAM337588 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337588

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337588 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337588 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337588 is therefore inhibition of FHL2, a GAM337588 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337588 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337588 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337588 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337588 is therefore inhibition of HD. Accordingly, utilities of GAM337588 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337588 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337588 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337588 is therefore inhibition of

IGF1, a GAM337588 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337588 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337588 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM337588 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337588 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337588 is therefore inhibition of PRND, a GAM337588 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337588 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337589 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337589 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337589 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337589 is therefore inhibition of APP. Accordingly, utilities of GAM337589 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337590 APPBP2 ATTGCACACCAACCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337590 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337590 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337590 is therefore inhibition of APPBP2, a GAM337590 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337590 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337590 PRND ATTGCACACCAACCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337590 target gene. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337590 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337590 is therefore inhibition of PRND, a GAM337590 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337590 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337591 CAV1 GAGATGACTGGTGGC Caveolin 1, Caveolae Protein, 22kD (CAV1, Accession A A

TGGGGGC NM_001753.3) is a GAM337591 target gene. CAV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CAV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CAV1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337591 is therefore inhibition of CAV1, a GAM337591 target gene which may act as a scaffolding protein within caveolar membranes, and interacts directly with g- protein alpha subunits and can functionally regulate their activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CAV1.The function of CAV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1087.

GAM337591 DHCR24 GAGATGACTGGTGGC 24- dehydrocholesterol Reductase (DHCR24, Accession A A

TGGGGGC NM_014762.1) is another GAM337591 target gene. DHCR24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHCR24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of DHCR24 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337591 is therefore inhibition of DHCR24, a GAM337591 target gene which catalyzes the reduction of sterol intermediates. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with DHCR24.The function of DHCR24 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337591 SLC6A4 GAGATGACTGGTGGC Solute Carrier Family 6 (neurotransmitter transporter, A A
TGGGGGC serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM337591 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337591 is therefore inhibition of SLC6A4, a GAM337591 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM337591 TRPM2 GAGATGACTGGTGGC TRPM2 (Accession NM_003307.1) is another GAM337591 target gene. A A
TGGGGGC TRPM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TRPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of TRPM2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337591 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337591 is therefore inhibition of TRPM2, a GAM337591 target gene which may be a calcium channel and therefore is associated with Alzheimer. Accordingly, utilities of

GAM337591 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with TRPM2.The function of TRPM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM335.

GAM337592 HTR2A GAGATCCTTTCACAG TTGTGGT A A — 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession NM_000621.1) is a GAM337592 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337592 is therefore inhibition of HTR2A, a GAM337592 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337592 HTR2C GAGATCCTTTCACAG TTGTGGT A A — 5- hydroxytryptamine (serotonin) Receptor 2C (HTR2C, Accession NM_000868.1) is another GAM337592 target gene. HTR2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2C BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337592 is therefore inhibition of HTR2C, a GAM337592 target gene which activates phospholipase C and regulates intracellular calcium flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2C.The function of HTR2C and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM31.

GAM337592 SLC6A4 GAGATCCTTTCACAG TTGTGGT A A — Solute Carrier Family 6 (neurotransmitter transporter, serotonin), Mem (SLC6A4, Accession NM_001045.1) is another GAM337592 target gene. SLC6A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of SLC6A4 BINDING SITE, and secondary structure complementarity to the nucleotide

sequence of GAM337592 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337592 is therefore inhibition of SLC6A4, a GAM337592 target gene which terminates the action of serotonine by its high affinity sodium- dependent reuptake into presynaptic terminals. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337592 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with SLC6A4.The function of SLC6A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1294.

GAM337593 APP A A TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337593 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337593 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337593 is therefore inhibition of APP. Accordingly, utilities of GAM337593 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337594 APP A A TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337594 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337594 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337594 is therefore inhibition of APP. Accordingly, utilities of GAM337594 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337595 APP A A TGTGCACAACATGCA GGTTTGT APP (Accession NM_000484.1) is a GAM337595 target gene. APP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337595 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337595 is therefore inhibition of APP. Accordingly, utilities of GAM337595 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337597 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337597 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337597 is therefore inhibition of APPBP2, a GAM337597 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337597 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337597 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337597 is therefore inhibition of BACE2, a GAM337597 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337597 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337597 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence

of GAM337597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337597 is therefore inhibition of FHL2, a GAM337597 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337597 HD A A TGGGCAA CATTGCACTCCAGCC

HD (Accession NM_002111.3) is another GAM337597 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337597 is therefore inhibition of HD. Accordingly, utilities of GAM337597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337597 IGF1 A A TGGGCAA CATTGCACTCCAGCC

Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337597 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337597 is therefore inhibition of IGF1, a GAM337597 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337597 PRND A A TGGGCAA CATTGCACTCCAGCC

Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is another GAM337597 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions

of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337597 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337597 is therefore inhibition of PRND, a GAM337597 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337597 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337598 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337598 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337598 is therefore inhibition of APPBP2, a GAM337598 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337598 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337598 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337598 is therefore inhibition of BACE2, a GAM337598 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337598

include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337598 FHL2 A A CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337598 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337598 is therefore inhibition of FHL2, a GAM337598 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337598 HD HD A A CATTGCACTCCAGCC TGGGCAA HD (Accession NM_002111.3) is another GAM337598 target gene. BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337598 is therefore inhibition of HD. Accordingly, utilities of GAM337598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337598 IGF1 A A CATTGCACTCCAGCC TGGGCAA Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession NM_000618.2) is another GAM337598 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337598 is therefore inhibition of

IGF1, a GAM337598 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337598 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
TGGGCAA another GAM337598 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337598 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337598 is therefore inhibition of PRND, a GAM337598 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337598 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337599 FOS TGTGTAATGCTGAGA V- fos FBJ Murine Osteosarcoma Viral Oncogene Homolog (FOS, A A
TTTGGGC Accession NM_005252.2) is a GAM337599 target gene. FOS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FOS BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337599 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337599 is therefore inhibition of FOS, a GAM337599 target gene which Transcription factor, acting with JUN, may alter DNA methylation and therefore is associated with Alzheimer. Accordingly, utilities of GAM337599 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FOS.The function of FOS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM846.

GAM337601 GFAP TCTCAGTTTCCTCTG GFAP (Accession NM_002055.2) is a GAM337601 target gene. GFAP A A
CAAACAG BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337601 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337601 is therefore inhibition of GFAP. Accordingly, utilities of GAM337601 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337602 GFAP TCTCAGTTTCCTCTG GFAP (Accession NM_002055.2) is a GAM337602 target gene. GFAP A A

CAAACAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GFAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GFAP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337602 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337602 is therefore inhibition of GFAP. Accordingly, utilities of GAM337602 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GFAP.

GAM337605 BACE2 TCCCCAGGTTCTAGT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

CCTGAGT NM_138992.1) is a GAM337605 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337605 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337605 is therefore inhibition of BACE2, a GAM337605 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337605 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337606 APP TTGCTTTGGTTCAAG APP (Accession NM_000484.1) is a GAM337606 target gene. APP A A

TTAGGCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337606

RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337606 is therefore inhibition of APP. Accordingly, utilities of GAM337606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337606 GLUL TTGCTTTGGTTCAAG Glutamate- ammonia Ligase (glutamine synthase) (GLUL, Accession A A
TTAGGCA NM_002065.3) is another GAM337606 target gene. GLUL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLUL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of GLUL BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337606 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337606 is therefore inhibition of GLUL, a GAM337606 target gene which catalyzes the condensation of glutamate and ammonia to form glutamine. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with GLUL.The function of GLUL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.

GAM337606 IL1A TTGCTTTGGTTCAAG Interleukin 1, Alpha (IL1A, Accession NM_000575.3) is another A A
TTAGGCA GAM337606 target gene. IL1A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IL1A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337606 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337606 is therefore inhibition of IL1A, a GAM337606 target gene which stimulates thymocyte proliferation by inducing il- 2 release, b- cell maturation & proliferation, & fibroblast growth factor activity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337606 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IL1A.The function of IL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.

GAM337607 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337607 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337607 is therefore inhibition of APPBP2, a GAM337607 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337607 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
TGGGCAA NM_138992.1) is another GAM337607 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337607 is therefore inhibition of BACE2, a GAM337607 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337607 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
TGGGCAA another GAM337607 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337607 is therefore inhibition of FHL2, a GAM337607 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337607 include diagnosis, prevention

and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337607 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337607 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337607 is therefore inhibition of HD. Accordingly, utilities of GAM337607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337607 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337607 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337607 is therefore inhibition of IGF1, a GAM337607 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337607 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337607 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337607 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337607 is therefore inhibition of PRND, a GAM337607 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337607 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337608 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337608 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337608 is therefore inhibition of APPBP2, a GAM337608 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337608 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337608 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337608 is therefore inhibition of BACE2, a GAM337608 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337608 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337608 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337608 is therefore inhibition of FHL2, a GAM337608 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337608 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337608 target gene.
HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337608 is therefore inhibition of HD. Accordingly, utilities of GAM337608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337608 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A

TGGGCAA NM_000618.2) is another GAM337608 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337608 is therefore inhibition of IGF1, a GAM337608 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been

established by previous studies, as described hereinabove with reference to GAM25.

GAM337608 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM337608 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337608 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337608 is therefore inhibition of PRND, a GAM337608 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337608 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337613 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337613 target gene. APP A A GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337613 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337613 is therefore inhibition of APP. Accordingly, utilities of GAM337613 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337614 IGF1 CACCCCCAGGACCAC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A CTTGCGA NM_000618.2) is a GAM337614 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337614 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337614 is therefore inhibition of IGF1, a GAM337614 target gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337614 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated

with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337615 ADAMTS5 GTCCTGAGAACTGCT A Disintegrin- like and Metalloprotease (reprolysin type) with A A

CCAGTTA Thrombos (ADAMTS5, Accession NM_007038.1) is a GAM337615 target gene. ADAMTS5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADAMTS5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of ADAMTS5 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337615 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337615 is therefore inhibition of ADAMTS5, a GAM337615 target gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with ADAMTS5.The function of ADAMTS5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1216.

GAM337615 MAPK10 GTCCTGAGAACTGCT Mitogen- activated Protein Kinase 10 (MAPK10, Accession A A

CCAGTTA NM_138980.1) is another GAM337615 target gene. MAPK10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MAPK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPK10 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337615 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337615 is therefore inhibition of MAPK10, a GAM337615 target gene which is a members of the mitogen-activated protein kinase (MAPK) family that activate the Jun (see 165160) transcription factor. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337615 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPK10.The function of MAPK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.

GAM337616 BACE TCAGTAGCTGTCAAA Beta- site APP- cleaving Enzyme (BACE, Accession NM_012104.2) A A

ACTGGAG is a GAM337616 target gene. BACE BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8.

Nucleotide sequences of BACE BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337616 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337616 is therefore inhibition of BACE, a GAM337616 target gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337616 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE.The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.

GAM337616 HTR2A TCAGTAGCTGTCAAA 5- hydroxytryptamine (serotonin) Receptor 2A (HTR2A, Accession A A
ACTGGAG NM_000621.1) is another GAM337616 target gene. HTR2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HTR2A BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337616 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337616 is therefore inhibition of HTR2A, a GAM337616 target gene which modulates phosphatidylinositol production and intracellular Ca2 flux. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337616 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HTR2A.The function of HTR2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM593.

GAM337617 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337617 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337617 is therefore inhibition of APPBP2, a GAM337617 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function

of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337617 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A
A
GGGCAAC NM_012105.3) is another GAM337617 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337617 is therefore inhibition of BACE2, a GAM337617 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337617 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is
A A
GGGCAAC another GAM337617 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337617 is therefore inhibition of FHL2, a GAM337617 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337617 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
GGGCAAC NM_000618.2) is another GAM337617 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure

complementarity to the nucleotide sequence of GAM337617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337617 is therefore inhibition of IGF1, a GAM337617 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337617 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337617 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337617 is therefore inhibition of MME, a GAM337617 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337617 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337617 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337617 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337617 is therefore inhibition of PRND, a GAM337617 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337617 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.

GAM337619 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337619 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337619 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337619 is therefore inhibition of APP. Accordingly, utilities of GAM337619 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337620 APBB2 AATCATCATTATTTT Amyloid Beta (A4) Precursor Protein- binding, Family B, Member A A

GAAGTTTA 2 (Fe65- (APBB2, Accession NM_173075.1) is a GAM337620 target gene. APBB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APBB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APBB2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337620 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337620 is therefore inhibition of APBB2, a GAM337620 target gene which Interacts with beta- amyloid precursor protein and with APLP2. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337620 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APBB2.The function of APBB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337620 MAPT AATCATCATTATTTT Microtubule- associated Protein Tau (MAPT, Accession A A

GAAGTTTA NM_005910.2) is another GAM337620 target gene. MAPT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MAPT BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337620 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337620 is therefore inhibition of MAPT, a GAM337620 target gene which Microtubule- associated protein tau; promotes microtubule assembly. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337620 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MAPT.The function of MAPT and

its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.

GAM337621 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337621 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337621 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337621 is therefore inhibition of APP. Accordingly, utilities of GAM337621 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337622 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337622 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337622 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337622 is therefore inhibition of APP. Accordingly, utilities of GAM337622 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337623 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337623 target gene. APP A A
GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337623 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337623 is therefore inhibition of APP. Accordingly, utilities of GAM337623 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337624 APPBP2 TCTAAGAGAAAGGAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GTTCAGA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337624 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337624 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

A function of GAM337624 is therefore inhibition of APPBP2, a GAM337624 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337624 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337624 CNTF TCTAAGAGAAAGGAA Ciliary Neurotrophic Factor (CNTF, Accession NM_000614.2) is A A GTTCAGA another GAM337624 target gene. CNTF BINDING SITE1 and CNTF BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CNTF, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CNTF BINDING SITE1 and CNTF BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337624 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337624 is therefore inhibition of CNTF, a GAM337624 target gene which is a survival factor for various neuronal cell types. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337624 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CNTF.The function of CNTF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.

GAM337624 CRH TCTAAGAGAAAGGAA Corticotropin Releasing Hormone (CRH, Accession NM_000756.1) is A A GTTCAGA another GAM337624 target gene. CRH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of CRH BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337624 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337624 is therefore inhibition of CRH, a GAM337624 target gene which regulates the release of corticotropin from pituitary gland. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337624 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with CRH.The function of CRH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1976.

GAM337624 HADH2 TCTAAGAGAAAGGAA Hydroxyacyl- Coenzyme A Dehydrogenase, Type II (HADH2,
A A
GTTCAGA Accession NM_004493.1) is another GAM337624 target gene. HADH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HADH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HADH2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337624 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337624 is therefore inhibition of HADH2, a GAM337624 target gene which catalyzes the reversible oxidation of L- 3- hydroxyacyl- CoAs to form 3- ketoacyl- CoAs and binds intracellular amyloid- beta. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337624 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HADH2.The function of HADH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM1820.

GAM337624 NCSTN TCTAAGAGAAAGGAA NCSTN (Accession NM_015331.1) is another GAM337624 target gene. A A
GTTCAGA NCSTN BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCSTN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of NCSTN BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337624 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337624 is therefore inhibition of NCSTN, a GAM337624 target gene which has a central role in presenilin- mediated processing of beta- amyloid precursor protein (beta- APP, MIM 104760) and some aspects of notch (MIM 190198)/glp-1 signaling in vivo. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337624 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with NCSTN.The function of NCSTN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337624 PSEN1 TCTAAGAGAAAGGAA PSEN1 (Accession NM_007318.1) is another GAM337624 target gene. A A
GTTCAGA PSEN1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PSEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PSEN1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337624 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337624 is therefore inhibition of PSEN1. Accordingly, utilities of GAM337624 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PSEN1.

GAM337625 APPBP2 CATTGCACTCCAGCC Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

TGGGCAA Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337625 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337625 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337625 is therefore inhibition of APPBP2, a GAM337625 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337625 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337625 BACE2 CATTGCACTCCAGCC Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

TGGGCAA NM_138992.1) is another GAM337625 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337625 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337625 is therefore inhibition of BACE2, a GAM337625 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337625 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337625 FHL2 CATTGCACTCCAGCC Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

TGGGCAA another GAM337625 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337625 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337625 is therefore inhibition of FHL2, a GAM337625 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337625 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337625 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337625 target gene. HD A A

TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337625 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337625 is therefore inhibition of HD. Accordingly, utilities of GAM337625 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337625 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

TGGGCAA NM_000618.2) is another GAM337625 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337625 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337625 is therefore inhibition of IGF1, a GAM337625 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337625 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337625 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

TGGGCAA another GAM337625 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337625 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337625 is therefore inhibition of PRND, a GAM337625 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337625 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337626 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337626 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337626 is therefore inhibition of APPBP2, a GAM337626 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337626 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337626 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337626 is therefore inhibition of

BACE2, a GAM337626 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337626 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337626 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337626 is therefore inhibition of FHL2, a GAM337626 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337626 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337626 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337626 is therefore inhibition of IGF1, a GAM337626 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337626 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337626 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337626 is therefore inhibition of MME, a GAM337626 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337626 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337626 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337626 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337626 is therefore inhibition of PRND, a GAM337626 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337626 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337627 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337627 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337627 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337627 is therefore inhibition of APPBP2, a GAM337627 target gene which interacts with the basolateral sorting

signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337627 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337627 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337627 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337627 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337627 is therefore inhibition of BACE2, a GAM337627 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337627 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337627 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337627 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337627 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337627 is therefore inhibition of FHL2, a GAM337627 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337627 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337627 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337627 target gene. IGF1 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337627 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337627 is therefore inhibition of IGF1, a GAM337627 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337627 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337627 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337627 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337627 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337627 is therefore inhibition of MME, a GAM337627 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337627 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337627 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337627 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337627 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337627 is therefore inhibition of PRND, a GAM337627 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly,

utilities of GAM337627 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337628 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337628 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337628 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337628 is therefore inhibition of APP. Accordingly, utilities of GAM337628 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337629 APP TGTGCACAACATGCA APP (Accession NM_000484.1) is a GAM337629 target gene. APP A A

GGTTTGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APP BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337629 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337629 is therefore inhibition of APP. Accordingly, utilities of GAM337629 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APP.

GAM337630 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337630 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337630 is therefore inhibition of APPBP2, a GAM337630 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical

conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337630 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337630 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337630 is therefore inhibition of BACE2, a GAM337630 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337630 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337630 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337630 is therefore inhibition of FHL2, a GAM337630 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337630 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337630 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337630 RNA are set

forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337630 is therefore inhibition of IGF1, a GAM337630 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337630 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337630 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337630 is therefore inhibition of MME, a GAM337630 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337630 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337630 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337630 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337630 is therefore inhibition of PRND, a GAM337630 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337630 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337631 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337631 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337631 is therefore inhibition of APPBP2, a GAM337631 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337631 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337631 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337631 is therefore inhibition of BACE2, a GAM337631 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337631 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337631 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337631 RNA are set forth in Tables 6 and 7, hereby

incorporated herein.

Another function of GAM337631 is therefore inhibition of FHL2, a GAM337631 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337631 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A
GGGCAAC NM_000618.2) is another GAM337631 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337631 is therefore inhibition of IGF1, a GAM337631 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337631 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337631 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337631 is therefore inhibition of MME, a GAM337631 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337631 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337631 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337631 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337631 is therefore inhibition of PRND, a GAM337631 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337631 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337632 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A

GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337632 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337632 is therefore inhibition of APPBP2, a GAM337632 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337632 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A

GGGCAAC NM_012105.3) is another GAM337632 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337632 is therefore inhibition of BACE2, a GAM337632 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337632 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A

GGGCAAC another GAM337632 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337632 is therefore inhibition of FHL2, a GAM337632 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337632 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337632 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337632 is therefore inhibition of IGF1, a GAM337632 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337632 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A
GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337632 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337632 is therefore inhibition of MME, a GAM337632 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337632 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A
GGGCAAC another GAM337632 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337632 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337632 is therefore inhibition of PRND, a GAM337632 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337632 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337633 APPBP2 ACTGCACTCCAGCCT Amyloid Beta Precursor Protein (cytoplasmic tail)- binding A A
GGGCAAC Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337633 target gene. APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by APPBP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE1 and APPBP2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

A function of GAM337633 is therefore inhibition of APPBP2, a GAM337633 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337633 BACE2 ACTGCACTCCAGCCT Beta- site APP- cleaving Enzyme 2 (BACE2, Accession A A
GGGCAAC NM_012105.3) is another GAM337633 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337633 is therefore inhibition of BACE2, a GAM337633 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337633 FHL2 ACTGCACTCCAGCCT Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is A A
GGGCAAC another GAM337633 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337633 is therefore inhibition of FHL2, a GAM337633 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337633 IGF1 ACTGCACTCCAGCCT Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A A

GGGCAAC NM_000618.2) is another GAM337633 target gene. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337633 is therefore inhibition of IGF1, a GAM337633 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337633 MME ACTGCACTCCAGCCT Membrane Metallo- endopeptidase (neutral endopeptidase, A A

GGGCAAC enkephalinase, (MME, Accession NM_000902.2) is another GAM337633 target gene. MME BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MME, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of MME BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337633 is therefore inhibition of MME, a GAM337633 target gene which is thermolysin- like specificity. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with MME.The function of MME and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337633 PRND ACTGCACTCCAGCCT Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A

GGGCAAC another GAM337633 target gene. PRND BINDING SITE1 through PRND BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE3, and secondary structure complementarity to the nucleotide sequence of GAM337633 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337633 is therefore inhibition of PRND, a GAM337633 target gene which is similar to prion protein

PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337633 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337634 APPBP2 CATTGCACTCCAGCC TGGGCAA Amyloid Beta Precursor Protein (cytoplasmic tail)- binding Protein 2 (APPBP2, Accession NM_006380.2) is a GAM337634 target gene. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of APPBP2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337634 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

A function of GAM337634 is therefore inhibition of APPBP2, a GAM337634 target gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with APPBP2.The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.

GAM337634 BACE2 CATTGCACTCCAGCC TGGGCAA Beta- site APP- cleaving Enzyme 2 (BACE2, Accession NM_138992.1) is another GAM337634 target gene. BACE2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BACE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of BACE2 BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337634 RNA are set forth in Tables 6 and 7, hereby incorporated herein. A A

Another function of GAM337634 is therefore inhibition of BACE2, a GAM337634 target gene which cleaves intracellularly the b-secretase site of amyloid precursor protein and therefore is associated with Alzheimer. Accordingly, utilities of GAM337634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with BACE2.The function of BACE2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337634 FHL2 CATTGCACTCCAGCC TGGGCAA Four and A Half LIM Domains 2 (FHL2, Accession NM_001450.2) is another GAM337634 target gene. FHL2 BINDING SITE1 and FHL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA A A

encoded by FHL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of FHL2 BINDING SITE1 and FHL2 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337634 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337634 is therefore inhibition of FHL2, a GAM337634 target gene which Contains four LIM domains and an additional zinc finger. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with FHL2.The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.

GAM337634 HD CATTGCACTCCAGCC HD (Accession NM_002111.3) is another GAM337634 target gene.
HD A A
TGGGCAA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of HD BINDING SITE, and secondary structure complementarity to the nucleotide sequence of GAM337634 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337634 is therefore inhibition of HD. Accordingly, utilities of GAM337634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with HD.

GAM337634 IGF1 CATTGCACTCCAGCC Insulin- like Growth Factor 1 (somatomedin C) (IGF1, Accession A
A
TGGGCAA NM_000618.2) is another GAM337634 target gene. IGF1 BINDING SITE1 and IGF1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IGF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of IGF1 BINDING SITE1 and IGF1 BINDING SITE2, and secondary structure complementarity to the nucleotide sequence of GAM337634 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337634 is therefore inhibition of IGF1, a GAM337634 target gene which are structurally and functionally related to insulin but have a much higher growth-promoting activity and therefore is associated with Alzheimer. Accordingly, utilities of GAM337634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with IGF1.The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM25.

GAM337634 PRND CATTGCACTCCAGCC Prion Protein 2 (dublet) (PRND, Accession NM_012409.1) is A A TGGGCAA another GAM337634 target gene. PRND BINDING SITE1 through PRND BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Nucleotide sequences of PRND BINDING SITE1 through PRND BINDING SITE4, and secondary structure complementarity to the nucleotide sequence of GAM337634 RNA are set forth in Tables 6 and 7, hereby incorporated herein.

Another function of GAM337634 is therefore inhibition of PRND, a GAM337634 target gene which is similar to prion protein PRNP. and therefore is associated with Alzheimer. Accordingly, utilities of GAM337634 include diagnosis, prevention and treatment of Alzheimer, and of other diseases and clinical conditions associated with PRND.The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.
